

SRIRAM REDDY PIDAPARTHI

Sunnyvale, California | pidaparthisriram0031@gmail.com | 8127784656 | <https://www.linkedin.com/in/sriramreddy-p/>

EDUCATION:

Master of Science in Computer Science
Indiana University, Bloomington, IN, USA

August 2022 – May 2024
GPA: 3.9/4

WORK EXPERIENCE:

Full-Stack Developer – Fractal Analytics – C3 AI (Client), California, USA
Generative AI Team

January 2025 – Present

- Built a **Generative AI** marketing platform that automated personalized email campaigns, landing pages, PDFs, microsites, and logged calls scaling to support **10,000+** leads per campaign and significantly reducing manual marketing effort.
- Engineered and deployed a scalable platform using **TypeScript + React/Redux** on the frontend and **Python** runtimes on the backend, designing clean APIs and implementing robust **unit testing** to ensure maintainable and testable codebases.
- Designed and implemented a Content Validation framework, integrating the frontend with LLM-powered agents to enforce brand, tone, and compliance guardrails surfacing contextual recommendations with override controls for marketing users.
- Developed and integrated Phone Call workflows across frontend and backend services, enabling seamless call logging, tracking, and management inside campaigns improving lead engagement visibility and sales team productivity.
- Resolved **350+** critical code quality issues by enforcing Python and TypeScript linting standards and fixing anti-patterns, significantly improving readability, maintainability, and extensibility of the codebase.

Full-Stack Research Developer – Indiana, USA
Hathi Trust Research Center

July 2024 – February 2025

- Developed and maintained full-stack applications utilizing **Python**, **FAST APIs** for backend services, and **React** combined with **Next.js** on frontend interactive data visualization interfaces, yielding a **90%** enhancement in user data interpretation.
- Worked in **Agile SDLC** (Analyzed, designed, implemented, tested, documented, and deployed) life cycle from the requirements gathering phase to building user stories and features of high quality (**scalable, reliable, low latency, and secure**).
- Engineered an **API gateway** to facilitate efficient, secure data exchange, contributing to a **40%** increase in backend performance, and integrated **D3.js** to create responsive web **widgets** displaying complex data trends.
- Piloted integration of **Redux** with **React**, crafting dynamic user interfaces that respond seamlessly to evolving data states.
- Orchestrated the deployment, handled **DevOps**, and managed containerized **microservices** using **Kubernetes**, enhancing system **resilience** and **scalability**, and implemented **caching** resulting in a **20%** improvement in service uptime.
- Defined a **Python**-based notebook utilizing **Machine Learning** capable of producing insightful summaries from extensive volumes of text data, thereby improving data comprehension by **75%** and facilitating informed decision-making.

Software Engineer – Tata Consultancy Services, Hyderabad, India
Digital Cadre – CMI-Unit, VCS Team

July 2021 – July 2022

- Programmed scripts using **Node JS**, **JavaScript**, **Redux**, and **ReactJS** to improve the existing codebase, resulting in **44%** faster page load time for the OTT Platform, SONY Pictures Network India under target timelines.
- Migrated codebase from local infrastructure to **AWS** integrating **CI/CD** practices, using services like Lambda, Amazon RDS, and API Gateways. This transition boosted scalability and performance while enhancing the overall system robustness by **57%**.
- Integrated frontend platform with JWT authentication and optimized API interactions, significantly enhancing application security, performance, and user experience by **50%**.
- Handled potential issues in production and development with a turnaround time of 1-2 days. Reduced and resolved security risks, bugs, code smells, and memory leaks by performing frequent code analysis with **Selenium Testing**, and **UI Testing**.
- Worked on a live dashboard application in **JavaScript**, fetching real-time user statistics from the Roku **API server** providing crucial insights, and enabling data-driven decisions to enhance user satisfaction and retention by **33%**.
- Trained **50** new developers with web development technologies, resulting in a skilled team that accelerated project deadlines.

Full-Stack Developer – Bellwether, Hyderabad, India

June 2020 – June 2021

- Developed Features and fixed bugs enhancing the user experience for their B2B Credit Processing Solution using **Java**, **Spring Boot**, **Kafka**, **Ant**, **Tomcat**, **Maven**, **Eclipse**, and **Hibernate** on the Backend and Prime Faces, and JavaScript on the Frontend.
- Integrated **Spring JWT** authentication for secure user access to the application and designed ERD for MYSQL DB, ensuring effective data management and developed automated CI/CD pipelines/scripts to reduce deployment time.

SKILLS:

- Programming Languages:** Python (Pandas, NumPy), Java/J2EE, JavaScript/TypeScript, C++, C.
- Web Technologies:** HTML, CSS, Bootstrap, jQuery, Ajax, React JS, AngularJS, Mocha, RESTful APIs, Redux JS, Node JS, GraphQL.
- Databases:** SQL Server, MySQL, PL/SQL, Oracle, MongoDB, PostgreSQL, SQLite.
- Cloud:** AWS (EC2, Lambda, SES, Aurora, S3, RDS, DynamoDB, SNS, VPC, EBS, SQS, CloudWatch, Elastic Search), Azure.
- Other:** Apache Kafka, Postman, GIT, Docker, Apache Spark, Microservices APIs (REST, SOAP), Jenkins.
- Certifications:** [Data Structures, UCSD](#) | [HTML, CSS, and JavaScript for Web Developers](#) | [AWS Certified Solutions Architect](#)
- Publication & Patent:** Executed the idea of utilizing sensors in the boats which could diminish the fatality rate in boat mishaps. Worked on a prototype and published a [research paper](#) and patent (Patent no. 202141031102) reviewed by IEEE.
