

Sushanth Kodipyaka

Software Engineer

United States | kodipyakasushanth@gmail.com | +1 (551) 310 1559 | [LinkedIn](#)

Summary

- Full Stack Developer with 4+ years of expertise in building scalable and high-performance web applications, using Java, Spring Boot, React.js, Angular, and JavaScript.
- Backend Development Expertise in designing and developing RESTful APIs, Microservices, and server-side logic using Spring Boot, Node.js, and Express.js, integrated with SQL (MySQL, PostgreSQL) and NoSQL (MongoDB, Firebase) databases.
- Frontend Development Skills with hands-on experience in React.js, Angular, Vue.js, HTML5, CSS3, TypeScript, and Bootstrap, ensuring responsive UI/UX and optimized performance.
- Cloud & DevOps Knowledge, leveraging AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes, Jenkins, Git, and CI/CD pipelines for efficient deployment, scalability, and monitoring.
- Agile & Testing Expertise, following Agile methodologies with tools like JIRA, Confluence, and Scrum practices, and ensuring code quality with JUnit, Selenium, Jest, and Cypress for automated testing.
- Strong expertise in Data Structures & Algorithms, System Design, and Performance Optimization. Passionate about designing efficient backend architectures and delivering seamless front-end experiences

Technical Skills

Front-End Technologies:	HTML, CSS, Bootstrap, UI Material, SASS, JavaScript, Typescript, ES6, React JS, Redux, React Hooks, React Native, Angular JS
Back-End Technologies:	Java, Python, RESTful API, Webservice, Microservices, Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, Node JS, Ruby, Django, DSA, PHP.Net
J2EETechnologies:	Servlets, JSP, JDBC, JUNIT, JMS, Maven, Multi-threading
Methodology:	Waterfall, Agile Scrum, Agile Kanban, TDD
IDEs:	NetBeans, IntelliJ IDEA, Eclipse, Visual Studio
Web Services:	RESTful, SOAP
Databases:	SQL, MongoDB (NoSQL), PostgreSQL, MySQL
CI/CD & Tools:	Jenkins, Code Ship
Testing tools:	Mockito, React Testing Library, Jest
Cloud & Deployment:	AWS, Docker
Web Server:	Apache Tomcat, WebLogic
Other Tools:	Jira, Git, SVN, Ant, GitHub, Bitbucket, Swagger Open API, Graph QL
Operating Systems	Windows, LINUX, Mac iOS.

Work Experience

JPMorgan Chase, TX | Software Engineer

Jan 2024 – Current

Tech Stack: Angular, NgRx, RxJS, Bootstrap, Spring Boot, Spring MVC, Java 11, Spring Data JPA, PostgreSQL, Jenkins, GitLab, Docker, AWS, OAuth 2.0.

- Collaborated with cross-functional teams in an Agile/Scrum environment to enhance system features, regulatory compliance, and performance.
- Developed dynamic and responsive UI components using Angular and Bootstrap, enhancing user experience and reducing load times by 40%.
- Utilized Angular Reactive Forms and RxJS Observables to handle dynamic form validations and asynchronous data streams, enhancing real-time interaction and improving user responsiveness.
- Integrated NgRx for scalable Angular state management across multiple components, improving maintainability of complex financial workflows and ensuring predictable state transitions.
- Designed and built secure microservices and RESTful APIs with Spring Boot and Spring MVC, ensuring seamless integration with internal and external financial data sources.
- Leveraged Java 11 features such as Lambda expressions, Streams API, and Optional class in business service layers to write cleaner, more efficient backend logic for financial rule engines.
- Designed and implemented Spring Data JPA repositories with custom query methods and pagination, simplifying data access layers and maintaining consistency across modules.
- Developed centralized exception handling using Spring AOP and @ControllerAdvice, enabling standardized error messaging and easier debugging across the API layer.

- Integrated OAuth 2.0 authentication and role-based access control, ensuring secure access management and compliance with financial security standards.
- Optimized complex SQL queries and improve database performance in PostgreSQL, reducing query execution time by 25%.
- Implemented CI/CD pipelines using Jenkins and GitLab, automating deployments and reducing release cycles by 50%.
- Deployed the Enterprise Risk Management System on AWS using Docker, enabling auto-scaling and achieving 99.9% uptime.

Cognizant – India | Full Stack Developer

Jul 2020– Dec 2022

Tech Stack: React.js, Redux, Node.js, Spring Boot, Oracle Database, AWS (Lambda, EC2, S3), Docker, Kubernetes, Jenkins, GitHub Actions, Elasticsearch, Postman, Jest.

- Collaborated with cross-functional teams to gather requirements, conduct feasibility analysis, and deliver features that aligned with business objectives and user needs.
- Led the development of a patient management system for scheduling, medical record management, and appointment tracking, increasing operational efficiency by 30% and reducing manual errors by 20%.
- Built responsive and user-friendly web interfaces using React.js, implementing Redux for state management and optimizing load times with lazy loading and code splitting, leading to a 40% improvement in page performance.
- Designed and developed secure backend services using Node.js, and later extended backend capabilities with reusable service layers in Spring Boot using DTO patterns, reducing code duplication by 30% across backend modules.
- Created RESTful APIs for seamless communication between systems and integrated advanced authentication using OAuth2.0 and role-based access control to ensure HIPAA compliance and secure user data.
- Applied Java Stream API for data transformation in billing and scheduling logic, processing over 50,000 records with improved functional clarity and reducing processing time by 25%.
- Configured Spring Scheduler for automated tasks like daily appointment reminders and record archiving, improving task execution reliability and reducing missed patient notifications by 18%.
- Improved API performance by optimizing database queries with Oracle Database and reducing query response times by 25% using indexing and caching strategies.
- Deployed scalable microservices on AWS using Lambda, S3, and EC2, reducing infrastructure costs by 20% while enabling seamless scaling and compute efficiency.
- Containerized applications using Docker and managed production environments with Kubernetes to ensure consistent deployment, high availability, and system reliability.
- Automated CI/CD pipelines with Jenkins and GitHub Actions, reducing deployment time by 50% and enabling faster integration of new features.
- Implemented real-time monitoring and alerting using Elasticsearch, enabling proactive issue resolution and improving system uptime to 99.9%.
- Conducted unit testing using Jest and integration testing with Postman, ensuring robust functionality and minimizing downtime during production releases.

Education

Master of Science in Artificial Intelligence- University of North Texas, Denton, TX

Bachelors in information technology- J.B Institute of Engineering and Technology, India
