

# Tilbe Arslan

## QA Automation Engineer

[tilbearsan@yahoo.com](mailto:tilbearsan@yahoo.com) 941-718-8791 Richmond, VA

Authorized to work in the USA

### Profile Summary

Accomplished Automation Engineer with a wealth of experience in Quality Assurance covering Web & Client Server applications across hospitality, logistics, and transportation domains; proficient in various SDLC methodologies, notably Agile & Scrum, and skilled in Java-based frameworks. Comprehensive expertise in both automated/manual testing with procedures including Sanity, Functional, Regression, and API testing, along with a strong foundation in OOP and SDLC methodologies. Mastery in using Selenium WebDriver for web application testing, adept with Behavior-Driven Development using Cucumber, integrating tests with Jenkins for CI/CD. Familiarity with Maven, TestNG, JUnit and Java for test automation, and utilizing Page Object Model for scalable test framework creation. Strong background in OOP, JDBC, API, Oracle, MySQL, and SQL projects; established automation frameworks and proficient in BDD with Cucumber. Collaborates effectively with Business Teams, Developers, and Stakeholders in an Agile Scrum environment; skilled in test management through Jira and version control with Git and GitHub. Engaged collaborator with strong interpersonal skills, able to influence and align multiple teams with conflicting priorities to drive progress under aggressive time constraints.

### Technical Skills

Java, JavaScript / Node.js, SQL, HTML, XML, Selenium WebDriver, Playwright, TestNG, Cucumber, Gherkin, JUnit, BDD, DDT, POM, REST Assured, Maven, Jenkins, JDBC, API Web, AWS Cloud Services, Oracle, MySQL, Appium, Git/GitHub, IntelliJ, Postman, Jira, Jira Xray, Smoke, Regression, Automation, Manual, End-to-End, Data-Driven, Agile-Scrum, SDLC

### Professional Experience

#### Penske

Tampa, FL Mar. 2022 – Present

##### QA Automation Engineer

- Developed and optimized project strategies using Selenium WebDriver, Cucumber, Java, Gherkin, and the Page Object Model, resulting in minimized delivery risks and improved code reusability.
- Gathered essential data and conducted a variety of tests (Functional, Smoke, Positive, Negative, Regression, Front-end, and Back-end), resulting in improved evaluation and comprehensive assessment of application performance.
- Utilized technologies like SQL, JDBC, REST Assured, and Postman for tasks such as constructing queries, integrating into test scripts, and executing API tests, leading to accurate database validation and assured system integration with a decrease in response time.
- Engaged in the Agile Scrum lifecycle, performed Automation and Manual Testing, supported application releases, managed dependencies with Maven's POM.xml and core Java.
- Managed bug logging in Jira, collaborated closely with developers on Modification Requests, and expanded testing expertise through diverse techniques and methodologies within the Agile framework.
- Refined and assiduously upheld automation scripts on Git and GitHub, facilitating impeccable version management and synergistic team engagements.

#### Marriott

Bethesda, MD Sep. 2019 – Feb. 2022

##### QA Automation Engineer

- Played a pivotal role within the software development life cycle by designing comprehensive automation testing strategies, developed Java-based robust frameworks, and fostered team collaboration for efficient test deliveries within an Agile testing environment.
- Led diverse testing types, including regression, sanity, functional, and database, ensuring comprehensive test coverage and product quality.
- Emphasized the importance of Agile Testing practices by actively participating in Scrum calls, Sprint Planning, Reviews, and retrospective sessions, leading to more effective sprint deliveries. Actively communicated with developers and QA professionals utilizing platforms like Slack and GitHub for effective collaboration.
- Designed and implemented test cases using JUnit, ensuring robust unit testing and seamless integration with the broader framework, leading to optimal code coverage.
- Utilized Cucumber for Behavior Driven Development, allowing for clearer communication between developers, testers, and stakeholders through readable test scenarios, reducing defect density during the testing phase.
- Developed API tests to validate the integration points, ensuring reliable data exchanges, utilizing tools like REST Assured for enhanced test coverage, which led to a decrease in integration defects.
- Conducted mobile testing using Appium, ensuring reliable functionality and seamless user experiences across mobile platforms.

### Education

Bachelor's Degree in Economics and Finance

Akdeniz University – Antalya, Turkey 2014 – 2019
