PROFESSIONAL SUMMARY

Full Stack .NET Developer with 5+ years of experience building scalable web applications and microservices using .NET Core, .NET Framework, C#, ASP.NET MVC, Angular, and React. I am skilled in developing cloud-native solutions on Azure and AWS, with expertise in REST/GraphQL APIs, WebSocket's, Kafka, and RabbitMQ. Experienced in SQL/NoSQL, CI/CD pipelines, dependency injection, SOLID principles, TDD, and automation using Python, Terraform, UiPath RPA, and Gen AI for intelligent workflows. Proven ability to deliver secure, high-performance applications across healthcare and finance through end-to-end SDLC ownership

TECHNICAL SKILLS

Front-End: Angular 16/18/8/2, React 8+, Blazor, HTML5, CSS3/SCSS, JavaScript, Vue JS, Knowledge on Express.JS, jQuery, Node Js, Bootstrap, Razor Pages, MVC, WCAG 2.1 Compliance

Back-End: .NET Core 4.0/8.0/6.0, .NET Framework 4.0+/4.8, C#, VB.Net, ADO.Net, GraphQL, LINQ, Python, Ruby, Entity Framework, Web API, RESTful APIs, Microservices, WCF, WPF, AJAX

Databases: SQL Server, SQL, PL/SQL, No SQL, PostgreSQL, MongoDB

Cloud & DevOps: Azure (AKS, App Insights, Service Bus, Functions, Data factory, Redis Cache), AWS (EC2, S3, Lambda, IAM, EBS, ELB, VPC, Redshift), Azure DevOps, Jenkins, GitHub Actions, Docker, Kubernetes, Terraform, GCP

AI & Automation: Azure AI Services, OpenAI API integration, AI-powered chatbots, xUnit, NUnit, Moq, UAT, TDD, BDD

Reporting & Tools: SSRS, Crystal Reports, Power BI, Visual Studio, SQL Server Management Studio, IIS, Figma, Adobe, AEM, Microsoft 365, Share point, One Drive

Security & Integration: OAuth 2.0, JWT, SSL/TLS, Role-Based Access Control (RBAC), Kafka, RabbitMQ, XML, JSON

Agile Methodologies: Scrum, Kanban, JIRA, Waterfall, Confluence

Operating Systems: Windows, Linux/UNIX, IOS

Other Languages: C, C++, Python, Java, Go Lang

WORK EXPERIENCE

Full Stack .Net Developer | Amerisource INC

Jun 2023 - Present

- Led SDLC for B2B/B2C healthcare platforms using .NET Core 8+, ASP.NET Core, C#, ADO.Net, Entity Framework; applied SOLID and OOAD for scalable, secure, and modular architecture.
- Designed and built microservices with Azure AKS, Docker, Kubernetes; implemented real-time workflows using Azure Event Hub, Azure Service Bus, Kafka, and RabbitMQ for prescriptions, billing, and scheduling.
- Developed RESTful APIs, GraphQL, WCF, and SOAP with Swagger; integrated with EHR/EMR systems using JSON, XML, YAML, and AJAX for seamless healthcare data exchange.
- Collaborated with product owners, stakeholders, and business teams on UI/UX using Figma and Lucid chart; built responsive, WCAG 2.1-compliant UIs with Angular 18, Vue.js, Blazor, Node.js, JavaScript, TypeScript, SCSS, jQuery and Kendo UI.
- Built high-performance backend solutions with SQL Server, PostgreSQL, Azure Cosmos DB, MongoDB, Oracle, LINQ, and ADO.Net to improve data access and analytics.
- Built scalable ETL pipelines and data warehousing using Azure Data Factory and Azure Data Warehouse for claims, reporting, and large dataset transformation.
- Managed healthcare documents with Azure Blob Storage; strengthened security with Azure Active Directory (Azure AD), OAuth 2.0, OpenID Connect, and RBAC, ensuring HIPAA/FHIR compliance.
- Automated infrastructure provisioning using Python scripting and terraform; used Azure Functions with HTTP Triggers to streamline form processing and asynchronous operations.
- Integrated Azure OpenAI APIs for Gen AI assistants, predictive analytics, and workflow automation, enhancing user support and system intelligence.
- Built dashboards with SSIS, Power BI, Crystal Reports, and SSRS for reporting on patient trends, claims, and operational insights.
- Provided ongoing support for the OpenText Extended ECM implementation, streamlining records management and enabling process optimization.
- Built a healthcare provider directory with Sitecore search functionality and integrated third-party data sources for accuracy and completeness.
- Boosted performance using Azure Redis Cache for fast in-memory data access; implemented TDD using xUnit, NUnit, and Moq; led QA, UAT, and integration testing cycles.
- Proactively identified and resolved production issues by reviewing code and analyzing logs, implementing solutions to ensure smooth application functionality.
- Delivered CI/CD automation using Azure DevOps, Jenkins, GitHub Actions, Terraform, Git, and SVN; supported Agile delivery with JIRA, Confluence, Git Copilot, and TFS.

Full Stack .Net Web Developer |Tech Mind Solutions

May 2022 – Jun 2023

- Participated in the full Software Development Life Cycle (SDLC) to build enterprise-grade web applications using .NET 6, ASP.NET MVC 5, C#, and Entity Framework, with APIs deployed on Azure App Services and Java modules hosted on Apache Tomcat.
- Developed responsive, modular frontends using Angular 8/16+, HTML5, Bootstrap, CSS3, JavaScript, Typescript, jQuery and MVC Master Pages, delivering high-performing UI Layouts for B2B and B2C users.
- Built secure RESTful APIs using ASP.NET Web API 2.0 and Java, managed via Azure API Management, protected with SSL, and structured for clean Dependency Injection
- Built backend systems with SQL Server with full CRUD operations, creating complex stored procedures, functions, views, schemas, and LINQ queries; followed repository, unit-of-work patterns and SOLID principles.
- Developed cloud-native microservices using .NET 6 and Azure Functions, integrated with Blob Storage, Key Vault, and Service Bus for messaging and configuration security.
- Automated CI/CD pipelines with Azure DevOps Pipelines and TFS, ensuring smooth builds, deployments, and rollback safety across environments.
- Maintained and enhanced legacy processes with Windows Services using C# (via Top Shelf) and VB6, improving reliability of background job processing and data sync tasks.
- Monitored production apps using Azure Application Insights, Log Analytics, and dashboard alerts, collaborating across design and backend teams to proactively address performance issues.

- Built scalable financial platforms using .NET Framework, ASP.NET MVC 5, C#, Angular, React, Node.js, and Python to support real-time payment processing, account management, and transaction workflows.
- Developed secure RESTFUL APIs and microservices with .NET Core, GraphQL, WCF, and ADO.Net, integrating with payment gateways, encryption modules, and legacy VB.Net systems.
- Designed modern UIs using RxJS, Redux, and TypeScript; collaborated with stakeholders using Figma, JIRA, and UML diagrams to map features, flows, and architecture.
- Managed structured/unstructured data using SQL Server, MongoDB, SQLite, and Cassandra; built complex SQL queries, stored procedures, functions, triggers, and schemas for audit, reporting, and transaction integrity.
- Participated in Agile ceremonies, including daily scrums, sprint planning, and retrospectives, using JIRA to track progress and improve team collaboration
- Configured and optimized IIS (Internet Information Services) for hosting and managing .NET applications, ensuring improved application reliability, scalability, and response times.
- Implemented Redux for state management in React application, enabling efficient handling and synchronization of dynamic application state across components.
- Delivered enterprise reports with SSRS and built robust ETL pipelines using Apache Spark and Azure Data Factory to support compliance and executive dashboards.
- Migrated legacy applications to AWS using EC2, S3, RDS, ElasticSearch, and Lambda, orchestrating infrastructure via CloudFormation and IaC tools.
- Containerized backend services with Docker and deployed using Kubernetes Orchestrator, improving environment consistency and deployment automation.
- Enabled real-time messaging and updates with WebSocket's and WebRTC, improving payment status visibility and customer-agent communications.
- Handled backend automation and scripting with Python and Ruby, streamlining financial workflows, reconciliation logic, and batch processing.
- Automated financial operations using UiPath RPA and Python, managing execution and scheduling through UiPath Orchestrator for KYC, data sync, and compliance.
- Delivered releases via CI/CD pipelines using Azure DevOps, Jenkins, AWS CI/CD, and Git; ensured quality with xUnit, Postman, and full UAT/regression testing cycles.

PROJECTS

Besmoke Inventory Tracker

Built a full-stack inventory management system using ASP.NET Core Web API, React.js, SQL Server, and Entity Framework Core to manage scientific product stock levels with real-time visibility. Implemented features like low- inventory alerts, inventory reporting, and CRUD operations with backend-frontend integration via RESTful APIs. Developed a responsive and user-friendly UI with Bootstrap and validated functionality through Swagger API testing, unit testing, and UI behavior validation

Order Inventory System

Developed a robust backend system using .NET Core Web API, C#, and Entity Framework Core to manage real-time order processing, asynchronous fulfillment, and inventory updates in an e-commerce environment. Applied SOLID principles, dependency injection, and the repository pattern to ensure testability and clean architecture. Handled concurrency using thread-safe techniques and implemented async/await for non-blocking operations. Achieved 100%- unit test coverage using xUnit and Moq, validating business logic, concurrent order handling, stock restoration, and custom exception flows.

EDUCATION

Master's in Computer science – *Rivier University, Nashua, NH* – May 2023

Bachelor of Science in Computer Science – *JNTU, Hyderabad, India* – May 2019

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals
- AWS Certified Solutions Architect – Associate
- Azure Certified Solutions Developer – Associate
- .Net Web Developer certified
