SUMMARY

- Software Engineer specializing in building scalable, cloud-native, and secure full-stack applications across fintech and enterprise domains.
- Proficient in Java, Python, TypeScript, Go, with hands-on experience in React.js, Angular, Spring Boot, Django, and Flask.
- Strong background in RESTful and GraphQL API development, real-time systems with WebSocket, and front-end performance optimization.
- Experienced in cloud platforms including AWS, Azure, and GCP, leveraging services like EC2, Lambda, S3, and GCP Kubernetes Engine.
- Skilled in containerization (Docker), orchestration (Kubernetes), and CI/CD automation using GitHub Actions, Jenkins, and GitLab CI.
- Implemented robust authentication and authorization flows using JWT and OAuth2, ensuring data privacy and compliance.
- Applied modern software design patterns including MVC, Observer, Strategy, and Factory for maintainable and scalable architecture.
- Integrated Machine Learning and LLMs using TensorFlow, PyTorch, and Transformers for NLP, predictive analytics, and AI-powered applications.
- Agile practitioner familiar with Scrum and Kanban, collaborating with cross-functional teams to deliver high-quality, business-critical software.

SKILLS

- **Programming Languages:** Java, Python, TypeScript, SQL, JavaScript, Go
- **Web Development:** React.js, Angular, HTML5, CSS3, SASS, Tailwind CSS
- **Backend Development:** Node.js, Express.js, Spring Boot, Django, Flask
- **Database Management:** MySQL, PostgreSQL, MongoDB
- **Version Control:** Git, GitHub
- **Cloud Platforms:** AWS (EC2, Lambda, RDS, S3), Azure, Google Cloud Platform (GCP)
- **DevOps & Automation:** Docker, Kubernetes, GitHub Actions
- **API Development:** RESTful APIs, GraphQL, WebSocket, JSON, Swagger, Postman
- **Security:** JWT, OAuth2
- **Testing:** JUnit, Mocha, Selenium, TestNG
- **Agile & Methodologies:** Agile, Scrum, Kanban
- **Continuous Integration/Continuous Deployment:** Jenkins, GitHub Actions, GitLab CI
- **Design Patterns:** Singleton, Factory, Observer, Strategy, MVC
- **Containerization & Orchestration:** Docker, Kubernetes
- **Infrastructure as Code:** Terraform, Ansible
- **Machine Learning & LLMs:** TensorFlow, PyTorch, Transformers, Natural Language Processing (NLP), Predictive Analytics.

EXPERIENCE

JPMorgan Chase & Co.

June 2023 – Present

Software Engineer

- Creating and enhancing the Wealth financial advisory platform driven by AI, utilizing technologies such as Python, Django, Flask, and TypeScript, to provide deeper analytical insights for clients.
- Implementing sophisticated NLP models and predictive analytics leveraging PyTorch, and Transformers (LLMs), improving recommendation accuracy by 45%.
- Engineered intuitive, responsive frontend interfaces with React.js and Tailwind CSS, elevating client engagement and user experience.
- Built robust, real-time communication channels using GraphQL resulting in 35% improvement in data response times.
- Secured application endpoints and data transfers utilizing industry-standard authentication via OAuth2, ensuring strict compliance with financial security standards.
- Managed cloud-native deployments on Google Cloud Platform (GCP), orchestrating scalable infrastructure using Kubernetes.
- Streamlined deployment and integration workflows through automation with GitHub Actions, achieving a reduction in release cycles by 30%.
- Adopted modern design patterns Observer to enhance maintainability, scalability, and flexibility of the codebase.
- Utilized Terraform for automated infrastructure provisioning and configuration management, streamlining deployment processes following Kanban agile principles.

Ivanti

January 2023 – May 2023

Software Developer

- Developed an IT Asset Management (IAM) automation system using Django and Flask, integrating RESTful APIs and GraphQL to enable seamless third-party integrations, achieving a 20% reduction in API response time.
- Designed and implemented a microservices architecture to enhance scalability, performance of distributed systems, and optimize caching with Redis and Memcached, improving system efficiency by 25%.
- Optimized database performance through indexing, partitioning, and normalization, ensuring fast and efficient data retrieval and storage in a scalable architecture.
- Automated deployment processes via CI/CD pipelines with GitHub Actions and Jenkins, facilitating zero-downtime releases across Azure and AWS cloud environments.
- Implemented high-performance algorithms in C for asset tracking, boosting system efficiency by 15%.

- Ensured secure authentication and data privacy by adhering to JSON security best practices, ensuring regulatory compliance in asset management processes.
- Executed comprehensive testing strategies using Pytest, unit tests, and integration tests to elevate system reliability through performance testing, profiling, and mocking.
- Managed infrastructure by orchestrating Docker and Kubernetes-based deployments, incorporating API rate limiting and load balancing to ensure high availability.

**Trigent Software
Software Engineer**

November 2019 – July 2021

- Developed a robust CRM Portal using Angular, HTML5, CSS3, and SASS for dynamic frontend interfaces, enhancing user interactivity and customer data visualization.
- Engineered RESTful backend APIs with Java Spring Boot, providing reliable and efficient data handling for customer transactions and analytics.
- Designed and implemented secure authentication mechanisms using JWT, significantly strengthening customer data security.
- Leveraged MongoDB to optimize database schemas and queries, improving data retrieval speeds by 35%.
- Containerized applications using Docker and deployed to AWS EC2 and Lambda, increasing overall application scalability and reliability.
- Automated build and deployment processes using Jenkins CI/CD pipelines, resulting in 40% faster deployment cycles.
- Utilized Postman for API documentation and testing, ensuring robust and error-free integrations across internal services.
- Applied industry-standard design patterns MVC to produce clean, maintainable, and reusable codebases.
- Conducted rigorous testing using JUnit, Selenium reducing software defects by 30% and enhancing end-user satisfaction.

PROJECTS

Real-Time Chat Application

- Built a responsive chat application using WebSocket, Express.js, and React.js, providing real-time messaging capabilities for seamless user interaction.
- Integrated secure authentication with JWT and optimized frontend performance using Tailwind CSS, significantly improving user engagement.

Intelligent Customer Support Chatbot

- Built a conversational chatbot leveraging Transformers (GPT) and Natural Language Processing (NLP) to handle customer queries and provide real-time assistance.
- Developed backend services using Python (Flask) and integrated secure APIs via OAuth2 for seamless customer interaction.

EDUCATION

Master in Information Science

University of North Texas, Denton, TX | GPA: 3.5 / 4.0

August 2021 – May 2023

Bachelor in Electronics and Communication Engineering

Vellore Institute of Technology, Vellore, Tamil Nadu, India | GPA: 7.69 / 10.0

August 2017 – June 2021

CERTIFICATIONS

- Certified Agile Scrum Master (CASM)
