

Venkata Sai Divya Hanumanthu - Java Full Stack Developer

NJ | venkatahanumanthu2002@gmail.com | +1 908-944-3956 | [linkedin.com/in/venkata-hanumanthu/](https://www.linkedin.com/in/venkata-hanumanthu/)

SUMMARY

Experienced Java Full Stack Developer with around 3 years in financial services and insurance industry, specializing in Java/J2EE technologies, and frameworks like Spring boot and hibernate. Proven expertise in AWS cloud deployment, microservices architecture, and regulatory compliance systems, with strong collaborative skills in cross-functional teams delivering scalable enterprise solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C++
- **Backend Technologies:** J2EE, JDBC, Servlets, Java beans, Microservices
- **Frontend Technologies:** React 18+, Redux Toolkit, React Hooks, Context API, TypeScript, JavaScript ES6+, HTML5, CSS3/SCSS, Bootstrap/Material-UI, Next.js, Webpack
- **Frameworks:** Spring boot, Spring MVC, Spring Security, Hibernate, Spring beans
- **Database Technologies:** PostgreSQL, MySQL, MongoDB, Redis Cache, Apache Kafka, Elasticsearch, Database Design, SQL Optimization, Data Modeling
- **DevOps & Deployment:** Docker, Kubernetes, AWS (EC2, S3, RDS, Lambda), Azure DevOps, Jenkins/GitLab CI/CD, Terraform, Container Orchestration, Serverless Architecture
- **API & Integration:** RESTful APIs, GraphQL, OAuth 2.0, JWT Authentication, HTTPS/TLS, JSON, Swagger/OpenAPI, External API Integrations, OWASP Security Practices
- **Testing & Quality Assurance:** JUnit 5, Mockito, Jest, React Testing Library, Selenium WebDriver, Postman/Insomnia, SonarQube, Test-Driven Development, Integration Testing, API Testing
- **Development Tools & Methodologies:** Git/GitHub/GitLab, IntelliJ IDEA/Eclipse, VS Code, Jira/Confluence, Agile/Scrum, Code Reviews, CI/CD Pipelines, Version Control, Zero-Trust Security

WORK EXPERIENCE

AIG, USA | Full Stack Developer

Jul 2025 – Present

- Configured Spring Boot microservices with React 18+ for AIG's property casualty insurance platform, streamlining policy administration workflows and achieving faster claim processing
- Analyzed real-time risk assessment data using Java 17+ and Redux Toolkit integration, providing underwriters with enhanced decision-making capabilities that improved policy pricing accuracy
- Built containerized insurance applications using Docker and AWS cloud services, ensuring reliable deployment for Duck Creek platform integrations during peak enrollment periods
- Evaluated GenAI implementation strategies for claims automation using Spring Security and REST APIs, reducing manual review processes by 40% while maintaining regulatory compliance standards
- Implemented event-driven architecture using Apache Kafka and React, modernizing legacy insurance systems to support digital transformation initiatives across property and casualty lines

AIG, USA | Java Full Stack Intern

Feb 2025 – May 2025

- Assisted in developing insurance policy management features using Spring Boot and React, supporting the team with UI component development and database integration tasks
- Collaborated with senior developers to implement REST APIs for claims processing workflows, gaining hands-on experience with Java backend development and testing procedures
- Supported migration of legacy insurance forms to modern React components, helping improve user experience for AIG's digital insurance platforms

Goldman Sachs, India | Java Full Stack Developer

Jul 2021 – Aug 2023

- Implemented Spring Boot 3.x microservices with Java 17+ to modernize IPO processing systems, streamlining financial workflows and enhance efficiency in high value transactions execution
- Interpreted real-time market data using React 18+, Redux Toolkit, and WebSocket integration, providing traders with portfolio insights that reduced trading latency by 60%
- Executed containerized deployments using Docker and Kubernetes on AWS, ensuring high availability for asset management systems during peak trading hours
- Developed automated compliance reporting modules with Spring Security and OAuth 2.0, meeting FINRA and SEC requirements while reducing manual checks
- Investigated user interaction patterns through React Hooks and Context API, identifying client onboarding bottlenecks and improving portal response time by 45%
- Validated Apache Kafka message streaming performance against REST APIs, optimizing data flow architecture for high-frequency trading systems
- Architected event-driven microservices using Spring Cloud Gateway, modernizing legacy trading applications to support increased transaction volumes
- Spearheaded zero-trust security implementation with JWT tokens, HTTPS/TLS encryption, and OWASP standards, enhancing financial data protection and compliance

EDUCATION

Master of Science in Computer Science, **New Jersey Institute of Technology, NJ**

May 2025

Bachelors in computer science engineering, **Dayananda Sagar University, India**

Jun 2023
