

***Results-driven Senior Software Engineer with 10+ years of experience
in designing, developing, and optimizing large-scale web applications.***

Proficient in Java, Spring Boot, AWS, and microservices architecture, with expertise in performance optimization and cloud-native solutions. Adept at collaborating with cross-functional teams and leveraging Agile methodologies, DevOps, and CI/CD pipelines to accelerate software delivery and drive innovation in fast-paced environments. Strong academic background in Machine Learning, AI, and Data Science, with practical experience in applying these concepts in problem-solving and development.

Areas of Expertise

- Object-Oriented Programming
- Agile & Scrum Methodologies
- Software Development Lifecycle
- Microservices & API Development
- Process Improvement
- Full-Stack Development
- Secure Coding Practices
- Cloud Computing & DevOps
- Problem-solving & Adaptability
- Performance Tuning & Scalability
- Database Management & Optimization
- Machine Learning & Artificial Intelligence

Technical Proficiencies

Observability Tools: Datadog, Dynatrace

Testing & Automation: JUnit, Groovy, Spock

Mobile Development: Android SDK, React Native

Operating Systems: Linux, macOS, Windows, Unix

Databases: PostgreSQL, Oracle, MySQL, Cassandra, SQL Server, SQLite

Programming Languages: Java, JavaScript, Python, SQL, R, MATLAB, SAS

Data & Analytics: IPython, NumPy, Pandas, Matplotlib, Scikit-learn, Elasticsearch, Spark

Web & Application Development: Spring Boot, Hibernate, Flask, React, Node.js, JQuery, HTML, CSS

DevOps & Cloud: Docker, Kubernetes, Jenkins, CircleCI, Git, AWS (Lambda, Step Functions, EKS, EMR, SageMaker, Athena), GCP

Professional Experience

MSC, Melville, NY

2023 – Present

Lead Software Engineer, Remote

Direct backend engineering teams to architect, deploy, and sustain Spring Boot API services within large-scale, cloud-based distributed environments, facilitating order history search, PO control, accounts payable, and payment processing for an e-commerce platform generating billions in annual revenue. Coordinate with lead software engineers to restructure critical services, including user authentication and distributed logging with Dynatrace, to optimize performance, maintainability, and usability. Oversee strategic planning, development, and deployment of a login account management system to automate password expiration for inactive accounts in SAP CDC, while integrating user notification emails for enhanced security compliance.

- Streamlined service modernization by partnering with cross-functional teams to transition legacy WSC and AS400 systems to cloud-based microservices.
- Strengthened engineering processes and knowledge sharing by developing and maintaining technical documentation, including Confluence pages and UML diagrams.
- Improved API service performance by collaborating with lead engineers and DSO team to enhance execution speed, resolving inefficiencies in workflows like express checkout.
- Diagnosed and resolved recurring issues in collaboration with DSO team by implementing solutions for network premature closing and data inconsistencies across GCP and legacy systems.

Cloudian, San Mateo, CA

2022 – 2023

Senior Software Engineer, Remote

Developed and deployed S3 object search capabilities within Clouidian Management Console (CMC), integrating Elasticsearch/OpenSearch for indexing and querying S3 objects and metadata. Built and maintained full-stack solutions, leveraging Java, Elasticsearch/OpenSearch, AWS, S3, and Cassandra for backend development, while utilizing JavaScript, jQuery, Bootstrap, and JSP for frontend enhancements. Coordinated with QA teams to establish test environments, design test cases, and execute validation steps to ensure system reliability and functionality. Authored comprehensive technical documentation outlining implementation strategies, architectural enhancements, and future recommendations within Confluence, Jira, and Slack.

- Increased scalability, availability, and long-term maintainability by evaluating and enhancing existing system architectures, proposing strategic optimizations.
- Enhanced system security and resilience by identifying and remediating vulnerabilities, mitigating cross-site scripting (XSS) threats, log masking issues, and other potential exploits.
- Strengthened security and access control by engineering authentication and authorization mechanisms using AWS IAM and S3 bucket access controls for object search and management functionalities.
- Improved system performance and reliability by configuring and optimizing a Kubernetes cluster for OpenSearch deployment using k3s and MetalLB, contributing to deployment package development with SaltStack, Helm, and shell scripting.

Altruist, Los Angeles, CA

2021 – 2022

Senior Software Engineer, Remote

Contributed to the development and maintenance of high-value securities (ACATs) and cash (ACH) transfer systems, ensuring seamless processing of millions of dollars daily through Apex APIs and third-party services. Engineered and deployed microservices architecture utilizing REST APIs, AWS SNS/SQS, and a Spring Batch service automated via Jenkins to streamline securities and cash transfer status updates. Drove inter-team technical discussions through biweekly forums and Slack channels, proposing and advancing backend optimizations using ETL pipelines, data warehousing, AWS Athena, and Spark to improve performance, scalability, and maintainability.

- Facilitated seamless cross-functional integration by coordinating with Trading and Data Engineering teams to enhance system interoperability and data exchange efficiency.
- Resolved client-facing issues in collaboration with front-end engineers by leveraging Elastic Stack for logging analysis and DataDog for monitoring, ensuring seamless functionality.
- Optimized system performance by rearchitecting inefficient business logic, enhancing data retrieval for orders, transfers, and transactions by implementing endpoint segmentation, SQL query optimization, strategic indexing, and front-end data integration, significantly improving response times and user experience.

Viome, New York, NY

2017 – 2021

Software Engineer

Directed a team of engineers in designing and implementing research management systems built with Dockerized microservices deployed on a Kubernetes cluster, leveraging Java, Spring Boot, Node.js, and Python. Configured and maintained a CI/CD pipeline for study system using CircleCI to streamline deployments and enhance operational efficiency. Engineered and maintained a full-stack web application enabling Translational Science team to access and analyze bioinformatics data, utilizing Spark, Spring Boot, and JavaScript.

- Elevated technical proficiency by recruiting, training, and mentoring graduate students, instilling best practices in coding, software development, and system design.
- Enabled data-driven decision-making for management team by designing and enhancing business report APIs to compute, aggregate, and present key business metrics.
- Ensured high availability and scalability by administering and maintaining AWS cloud infrastructure, including EC2, S3, RDS, IAM, EKS, ECR, Lambda, and Step Functions.
- Architected and deployed a chatbot powered by IBM Watson Assistant, integrating Spring Boot, PubNub, and REST APIs to facilitate seamless communication and automation.
- Strengthened collaboration and technical execution by providing guidance to cross-functional teams, supporting front-end developers using React, Node.js, Swift, and React Native, and back-end engineers leveraging Scala.

Samsung SDSA, Ridgefield Park, NJ

2017 – 2017

Software Developer

Engineered, maintained, and enhanced Telecom Expense Management Service (TEMS), a web-based application developed in Java utilizing Spring, MyBatis, and Samsung proprietary frameworks to streamline workflow and application service management. Designed and implemented APIs, microservices, and backend functionalities to support business

requirements. Optimized database structures and queries to improve efficiency, reduce latency, and ensure data integrity. Collaborated with cross-functional teams to align software development with business objectives and user needs.

- Designed a strategic roadmap for developing a mobile application for TEMS by integrating microservice architecture to enhance scalability and system flexibility.
- Optimized application performance by refining SQL scripts and refactoring Java code, enhancing efficiency for multiple Samsung subsidiaries managing thousands of user accounts and tens of thousands of registered mobile telecom assets daily.

Corcentric, AmeriQuest Business Services, Fairfield, NJ
Software Developer

2012 – 2017

Handled the development, implementation, configuration, and ongoing support of Account Processing (AP) web applications utilizing Spring.NET, ASP.NET, and VB.NET for high-profile clients, including Principal Financial Group, Hanesbrands, Papa John's, and NBA. Conducted code reviews and implemented best practices to maintain high-quality code and system security. Integrated third-party applications and cloud-based solutions to enhance platform capabilities. Automated workflows and processes to increase efficiency and reduce manual intervention. Researched and applied emerging technologies to improve software architecture and functionality.

- Engineered and structured database architecture by designing and optimizing tables, views, and stored procedures in SQL Server to enhance data integrity and performance.
- Architected, developed, and launched internal support web applications leveraging ASP.NET MVC, C#, JavaScript, and AJAX to streamline operations and improve functionality.

Education & Credentials

[Master of Science in Computer Science](#) | Montclair State University, Montclair, NJ, | GPA 3.90/4.00

Thesis: Semantic Analysis/Classification of Text Documents | Project: Bayesian Spam Detection

[Bachelor of Science in Business Administration](#) | Montclair State University, Montclair, NJ | Major GPA 3.82/4.00

[Bachelor of Business](#) | Western Illinois University, Macomb, IL | Major GPA 4.00/4.00

[Machine Learning](#) | Stanford University, Coursera, 2016

Professional Affiliations

[Memberships](#) | Beta Gamma Sigma, Golden Key National Honor Society, National Dean's List
