

Zaviriya Roktim

Business Analyst /Power BI Analyst/Product Owner | Zaviriya.Roktim@gmail.com | (724) 680 -3562

SYNOPSIS:

- **5+** years of experience in business analysis and product ownership, with a strong emphasis on **requirement gathering** and **process improvement**.
- Proven ability to **elicit, analyze, and document** complex **business requirements** while demonstrating **critical thinking** and **problem-solving** skills.
- Hands-On experience in authoring various requirements artifacts such as **epics, user stories, use cases, UML** diagrams, Business Requirements Document (**BRD**), Requirements Traceability Matrix (**RTM**), mockups etc.
- Experienced in making User Stories in **JIRA** and **Azure Devop** by **Agile Methodology** and well versed with **SCRUM** MODEL as a **Product Owner**.
- Deep understanding of healthcare industry standards, including HIPAA and **EDI X12** transactions (**834, 837, 835, 270/271, 276/277**).
- Experienced in designing and developing data-driven solutions, including **Power BI** reports and dashboards.
- Committed to user satisfaction by actively gathering feedback to improve products while ensuring **stakeholder management**.
- Strong **attention to detail** and ability to conduct thorough **research** to identify business needs and optimize solutions.
- Excellent communication and collaboration skills, ensuring effective **multitasking** across **cross-functional** teams.

Technical Skills:

Office Tools	Microsoft 365, SharePoint, Copilot, Teams
Business Modeling Tools	UML, JotForm, MS-Visio, JIRA, Power BI (AI Insights), Axure, Balsamiq
Database	SQL Server
Documentation Tools	JIRA, Azure Devops, Confluence
Models	Safe Agile framework, Agile (Scrum), Waterfall

Professional Experience:

Centurion Health| Vienna, VA

March 2024– Present

Business Analyst/Power BI Analyst/Product Owner

Project Name: Chronic Care Patients Database

SDLC Methodology: Safe Agile

Project Description:

The Centurion Health application is a robust scheduling and records management solution designed to optimize healthcare delivery within correctional facilities. Its primary users include schedulers, healthcare providers (doctors), and quality assurance teams who collectively ensure timely medical appointments and effective records management. The application streamlines the scheduling process to meet the healthcare needs of incarcerated individuals, particularly those with chronic diseases, ensuring compliance with regulations that mandate a doctor's visit every 90 days. This project ensures that Centurion Health's scheduling and records system meets the operational demands of correctional facilities while remaining compliant, efficient, and secure. The focus on a minimal customization approach reduces implementation complexity, making the system both cost-effective and maintainable.

Key Responsibilities

Product Vision and Strategy:

- Define and communicate the overall vision and goals of the Centurion Health application, ensuring alignment with business objectives like compliance assurance and streamlined scheduling.
- Ensure that the product strategy aligns with organizational priorities and stakeholder needs.
- Develop a clear vision for the Power BI reporting solution, ensuring it aligns with project objectives like compliance assurance and streamlined scheduling.

Backlog Management:

- Create, **refine**, and **prioritize** the **product backlog**, ensuring that high-value features (e.g., overdue appointment alerts, compliance reporting tools) are delivered first.
- Collaborate with the SME to write detailed user **stories**, **epics** and Power BI reporting requirements
- Implement **process improvements** within backlog refinement to enhance productivity and efficiency.

Stakeholder Collaboration:

- Act as the primary point of contact for stakeholders, ensuring their needs and expectations are clearly communicated to the development team.
- Utilize **stakeholder feedback** to continuously refine and enhance **business requirements**, ensuring alignment with organizational objectives.

Sprint Planning and Execution:

- Work closely with the **Scrum** team during **sprint planning** to clarify requirements and ensure the development team understands the "why" behind each feature.
- Actively participate in sprint reviews to ensure the product meets the acceptance criteria and delivers value.

Acceptance of Deliverables:

- Review and accept completed user stories based on defined acceptance criteria.
- Ensure that each sprint delivers an increment that aligns with the product vision and stakeholder priorities.

Requirements Elicitation and Documentation:

- Collaborate with stakeholders (schedulers, providers, CQI teams, and IT teams) to gather business and functional requirements.
- **Document** and refine user stories, epics, and **acceptance criteria** based on project objectives, such as streamlined scheduling, compliance assurance, and records management.
- Translate these needs into technical reporting requirements for the Power BI development team.

Stakeholder Communication:

- Act as a liaison between end-users and the development team to ensure clear understanding of project goals and priorities.
- Conduct workshops, interviews, and brainstorming sessions to validate and refine requirements.

Process Analysis and Optimization:

- Analyze existing scheduling and records management workflows and propose enhancements.
- Identify bottlenecks in current processes and recommend technical or operational solutions.
- Conduct detailed **requirement gathering** sessions with stakeholders to ensure alignment with business goals and system capabilities.

Data Analysis and Reporting:

- Define metrics and key performance indicators (KPIs) for compliance tracking (e.g., patients seen within the mandated 90 days).
- Collaborate with the technical team to develop dashboards and reports for real-time monitoring.
- Assist in defining DAX queries and calculated measures for custom KPIs (e.g., overdue patients, average appointment duration).
- Define filters, slicers, and visualizations to allow users to explore data interactively.

Role-Based Access Implementation:

- Work with IT to define user roles (Schedulers, Providers, CQI teams) and corresponding permissions.
- Ensure role-based access aligns with compliance and data security requirements.

User Acceptance Testing (UAT) & Quality Assurance

- Led UAT planning, execution, and defect tracking for system enhancements and new implementations
- Collaborated with business users, QA teams, and developers to define test scenarios, acceptance criteria, and expected outcomes.
- **Facilitated** UAT sessions with stakeholders, capturing feedback, documenting issues, and ensuring timely resolution.
- Ensure rigorous **attention to detail** in test case development and defect resolution to maintain high-quality deliverables.

Welldyne | Lakeland, FL

October 2021- February 2024

Business Analyst

Project: I worked towards upgrading various programs and plans while preserving the legacy system, with a primary focus on enhancing healthcare accessibility for clients. The project aimed to ensure seamless integration of new enhancements while maintaining the integrity of the current system.

Responsibilities:

- Translated BRD into functional specifications working with Subject Matter Experts within vanity to validate the solution.
- Prepared **swim lanes**, **workflow diagrams** and **business processes** utilizing **Visio**, **Lucidchart**
- Integrated the Business Rule Document and provided different approaches to the technical team for efficient data validation process.
- Led scrum ceremonies throughout the sprint for scrum team.
- Analyzed the Functional Design Document, Technical Design Document and discussed the same with Business and Developers to understand the complete Business requirement and the corresponding Code developed for modules like Forecasting, Reporting, Planning, budgeting.
- Conducted functional testing, end-to-end, Cross browser, System Integration testing and User Acceptance testing on several Web applications.
- Developed **features**, and **user stories** in **Azure DevOps** and **Jira** for technology initiatives.
- Conducted **data mapping**, prepared **test plans** and **scripts**, executed testing.
- Created **data mapping** documents and Technical Interface specifications for EDI.
- Managed **Test Scenarios** and corresponding Test Cases considering the Business Requirement and Functional Design Document.
- Monitored the created **Test scenarios** and **Test Steps** with the Business Team, Development Team and modifying the same, if necessary, based on the Review comments or additional requirements.
- Uploaded the reviewed Test cases, Test steps in testing Tool and mapping the Business requirements for Test Cases.
- Analyzed Business Requirement Documents and Vision Documents and wrote requirement-based Test Scripts. Worked with team members to expedite testing and deliver highest quality software products.
- Prioritized product backlog using **MOSCOW** Prioritizations method.
- Demonstrated knowledge of proper requirements specification and development, including process/functional requirements definition methods, **JAD sessions**, **use case development**, and **process flow diagrams**.
- Worked with internal stakeholders to validate solutions & translate technical requirements to client business processes.
- Making changes to existing legacy systems for member and providers portals according to the stakeholders and business.

- Helped create test scenarios with **QA** team and involved in going over **test cases**.
- Built relationships and become a trusted advisor to both decision makers and influencers.
- Established and maintained a continuous level of communication with clients and other project Stakeholders while clearly managing expectations.
- Proficient in **ChatGPT**, **QuillBot**, and Copilot & **Invideo AI**.

HealthFirst | New York, NY

Aug 2019- Aug 2021

Business Analyst

Project: Collaborated extensively with Product Managers, IT Domains, Enterprise Architects, Business Owners, and Subject Matter Experts to **elicit**, **analyze**, and **document Business Requirements**, **User Stories**, and Functional Requirements within both **Waterfall** and **Agile** development methodologies. My role encompassed representing end-to-end business value streams across specific lines of business or domains, ensuring alignment with overarching business objectives and strategic direction.

Responsibilities:

- Conducted requirements elicitation, documentation, and review processes, facilitating clear communication between development teams and stakeholders.
- Took ownership of all requirements documentation, **process flows**, and **data mapping** documentation for projects.
- Utilized tools like Visio to document process flows accurately and comprehensively.
- Led daily activities including refining user stories, gathering detailed requirements, and facilitating meetings with various stakeholders.
- Documented and maintained requirements using standard templates, ensuring clarity and alignment with project objectives.
- Proactively communicated and collaborated with business and internal IT team members to analyze information needs and requirements.
- Acted as a liaison among stakeholders, establishing partnerships and facilitating effective communication.
- Provided support to assigned **business analysis** resources, fostering a collaborative culture within the team.
- Supported the development and growth of junior team members in similar roles and functions.
- Performed additional duties as assigned by management, ensuring alignment with project goals and organizational objectives.
- Utilized **SQL** to extract and manipulate patient demographic data from the database.
- Collaborated with the analytic team to write **SQL queries** for generating monthly operational reports on claims processing efficiency.

Education

Bachelor of Education, University of Dhaka- 09/2014

Master of Education, University of Dhaka- 11/2015
