Email: krishna1505.v@gmail.com

Role Designation and Job Level: Senior Software Engineer

Objective:

- Lead Java/J2EE Application developer having around 9 years of global experience across various geographies (Virginia, Texas, Ohio, India) including 5 years of experience working in Airlines industry (Sterling, VA).

Summary:

- Around seven years of experience in architecture, planning, developing, implementing IT solutions in financial industry and lead cross functional teams with diverse technical backgrounds. A Sun Certified Java developer, quick learner, and mentor with the ability to make solutions oriented, creative, and innovative contributions in highly demanding situations.

Specialties:

- Expert in core Java development with very good hands-on in writing /analyzing SQL, writing stored procedures, functions.
- Strong experience in developing applications using Java, Servlets, JSP, EJB, JDBC, JNDI, JMS, Spring, Hibernate, Spring boot, Microservices, Web Services.
- Strong experience in Web Services (SOA) Big - Axis2, Axis, CXF, JAX-WS, SOAP and Restful – Jersey (JSR-311 JAX-RS API) application development.
- Extensive experience in developing web pages effectively using JavaScript, jQuery, HTML5, CSS3, JSF, Angular JS, Bootstrap also in making web pages cross browser compatible.
- IOC and Dependency Injection in various aspects of Spring Framework (Core, Web, JDBC, MVC and DAO).
- Experience in using Spring ORM module and integration with Hibernate ORM framework.
- Expertise in Hibernate which includes integrating legacy databases, writing custom CRUD statements
- Experience in using Spring DATA ORM module and integration with Hibernate ORM framework.
- Hands-on experience with Web/Application servers (Tomcat, IBM Web Sphere, BEA Web logic).
- Written SQL queries, stored procedures and triggers using relational databases.
- Worked on IDE Tools like IntelliJ, Eclipse, MyEclipse, Net Beans for Java/J2EE application development.
- Experienced in production support activities for deployment, bug fixing and troubleshooting for highly critical applications.
- Experienced working in AGILE SCRUM methodology Proficient in using Work environment tools like Jira, Bit Bucket, GitHub, Confluence, and Bamboo.
- Extensively used Maven, Gradle and ANT as build script for application build and deployment.
- A technology like JBPM helps in managing complex business processes in an efficient way. Implemented Swagger for the Rest API.
- I have good experience in Docker to deploy applications quickly, setup CICD pipeline and I have used Docker consoles for managing the application life cycle and monitored on Git.
- Fully hands-on experience in converting ANT to Maven conversion.
- Quick Learner, highly motivated team player with excellent organizational and analytical skills.
- Make the information and content available for users across the organization.
- Strong debugging and troubleshooting skills. Experience in creating test cases using junit.
- Well experience in doing load testing using JMeter and cucumber scripts.
- Experience with Azure and GCP cloud providers fabric connection creation.
- Strong contributor towards knowledge management activities including project documentation, user manuals, component user guides and other technical documentation.
- Excellent communication and interpersonal skills and good team player.
- Ability to learn new technology quickly and seamlessly manage workload to meet the deadline.

Technical Skills :

Programming Languages	Java, PHP, HTML5, SQL, JavaScript, C, C++, XML
J2EE Technologies	Java EE, JSP, Servlet, EJB, JDBC, JNDI, JSTL, JPA
Frameworks	Spring Boot, Microservices, Spring 3.x/4.x, Hibernate 3.x, Struts 1.x/2.x
Web Technologies	Angular 16, jQuery, Ajax, HTML5, CSS3, RESTFUL Service, Bootstrap, JSON, XML, Nodejs, React JS
Web Service	SOAP, REST, Apache Axis, WS security
Databases	Oracle, MySQL, SQL Server, and DB2
Application Servers	Apache Tomcat 6/7, WebLogic, WebSphere
Version Control System	GIT, Apache subversion SVN, Tortoise HG
Operating Systems	Microsoft Windows, Mac OS X and Linux
Other	XML, XSD, DTD, XSLT, XPATH, AWS, Maven.

Education:

- Bachelor of Technology in Electrical and Electronics Engineering PSRCMR- Vijayawada, JNTUK (2013)
- Master of science in Information technology and cybersecurity at sacred heart university (2015)

Professional Experience

Verizon – Product Orchestration and Dynamic Network Manager
Senior Software Engineer

Aug-2023 – Till Date

Responsibilities:

- Involved in gathering requirements, design, implementation, deployment, testing and maintaining of the applications to meet the organization's needs using SCRUM methodology.
- Participated in scrum meetings and coordinated with Business Analysts to understand the business needs and implement the same into a functional design.
- Developed front-end user interfaces with ReactJS by creating many components and modules.
- Used Bootstrap and ReactJS to create Controllers to handle events triggered by clients.
- Used most of the new features of Java 8 like lambda expressions for communicating between business layer and database, stream API for Bulk Data Operations on Collections using both streams and parallel streams.
- Developed integration modules for disparate client using Apache camel.
- Implemented Java technologies and designed web services infrastructure.
- Participated in published web services and scope requirements gathering.
- Created and executed logical designs and testing plans.
- Maintained deployment documentation and reviewed technical requirements.
- Created new framework for proxies' creation with corresponding Api's and followed further steps for the proxy successful execution from test console.
- Worked with different teams for consume and produce of new proxy events and notifying to the relevant api by using xslt.
- Participate in code reviews, sprint planning, and agile ceremonies with cross-functional teams.
- Implemented best practices and coding standards, ensuring high-quality code and adherence to industry norms.
- Experience with Equinix api's of cloud providers. Consuming Equinix cloud providers api's. Hands on work experience with AZURE, AWS and GCP fabric connection creation and cloud acceptance.

American Eagle Outfitters Inc.

Sep-2022 – July 2023

Production Support Technical Lead

The project is to setup monitoring framework, production operations management and implement site reliability engineering concepts for measuring various system and application performance metrics. The details obtained

provides insights into decision making, root cause identification, impact analysis and problem solving for the systems available in AEO ecommerce architecture.

- Analyze critical issues on triage calls and provide solution as an on-call representative.
- Create postmortem reports on the critical issues that had occurred earlier by including the issue timelines, mitigation steps, and cause of the issue and remediation steps to avoid future occurrences and finally provide the report to the leadership team.
- Acted as a communications liaison between upper-management and team members.
- Monitored machinery to ensure accurate and precise operation and performed minor technical corrections.
- Review, analyzed, and recommended software solutions that would be an ideal fit for project specifications.
- Reviewed and assessed customer data in real-time to discover and immediately address errors and anomalies before they caused major issues.
- Troubleshooted ATG, Microservices, SQL and other business issues and provided solutions for production issues with SLA.
- Strong and demonstrable incident management skills with relevant experience in an enterprise organization.

Wireless Communication and Managing Notification

Jan-2022-Jun-2022

Java Led developer

The primary objective is to enhance the My Business and My Business assistant to optimize the end user experience and provide new features as per the business requirements. This also includes troubleshooting recurring end customer frictions and optimize and enhance to permanently solve the same. My Business Assistant (MBA) is an internal tool that allows the My Business experience to be customized by request such as only allowing display of specific devices or plans for a given profile

- Contribute to all stages of software development lifecycle. Design, implement and maintain Java-based applications that can be high-volume and low-latency.
- Analyze user requirements to define business objectives. Envisioning system features and functionality and define application objectives and functionality.
- Used Micro service architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers.
- Used STS for development and debugging Spring Boot applications, Microservices and deployed into AWS.
- I have extensively used Angular 6 framework to create a Single Page Application (SPA).
- Integrated the Java code with Angular 6 and responsible for setting up Angular 6 framework for UI development.
- Ensure application designs conform with business goals. Develop and test software. Identify and resolve any technical issues arising and create detailed design documentation.
- Developed Hibernate classes to retrieve and save data using Spring Framework manager classes.
- Implemented Service Oriented Architecture (SOA) by developing and consuming RESTful web services and used Microservices to communicate using synchronous protocols HTTP and REST.
- Developed both Restful and SOAP web services depending on the design need of the project.
- Migrated the data from Oracle database to the Mongo database using listeners and Apache Kafka.
- Used Apache Kafka for reliable and asynchronous exchange of information between multiple business applications.
- Proposed changes to current Java infrastructure, Develop technical designs for application development. Develop multimedia applications and write well designed, testable code.
- Conducted software analysis, programming, testing, and debugging, Manage Java and Java EE application development, develop documentation to help users.
- Transformed requirements into stipulations, Prepare and produce releases of software components.
- Supported continuous improvement, investigating alternatives and technologies, and presenting for architectural review.

Technologies:

Spring Boot (Microservices), Java, J2EE, Oracle, SQL Server, Confluence, JIRA, Kibana, VS code, Node js, STS.

Airline Tariff Publishing Company -VA

Rapid Delivery and Maintenance

June 2017 -Dec-2021

Full Stack Developer/Production Support

The primary objective of Rapid Delivery project is to provide timely bug fixes and feature enhancements to customer issues & requests pertaining to core applications. The core product group includes applications like Rules, Fares, Footnotes, Optional Services, Branded Fares, and Ticketing Fees etc.

- Responsible for the analysis, documenting the requirements and architecting the application based on J2EE standards. Followed test-driven development (TDD) and participated in scrum status reports.
- Provided full SDLC application Development services including design, build/configure, integrate, test, and deploy enterprise mission-critical billing solutions.
- Developed various java Bean components for implementing business logic.
- Involved in developing components on Reporting Dashboard with Spring MVC, Spring boot, Spring Framework and Hibernate.
- Designed/developed UI with HTML, CSS, java script and Angular for interactive web pages.
- Involved in writing complex multi-table joins and conditional queries in database.
- Build Restful Web Services using JAX-RS API.
- Developed Hibernate in Data Access Layer to access and update information in the database.
- Developed Ant, Maven and Shell scripts to automatically compile, package, deploy and test J2EE applications.
- Developed JMS components to send messages from one application to other application internally.
- Used GIT repo to pull and push the code and followed GIT flow for the project.
- Worked as part of micro-services team to develop and deliver maven project to deploy on Tomcat.
- Written SQL queries, stored procedures modifications to existing database structure as required per addition of new features.
- Ensure that the enterprise content is secured and accessible across all levels.
- Implemented Client-side validations and server-side validations according to the business needs. Written test cases and done Unit testing and written executing Junit tests.
- Also involved in setting up guidelines for Automation and worked with the testes in creating and managing the scripts.
- Collaborated with developers to implement solutions, resolve problems, and perform code reviews.
- Involved in Production implantation and postproduction support.

Environments: Java 1.6and 1.8, Spring 4.0, Hibernate, Spring Boot, JDBC, JSP, DB2, SQL, Html, CSS, JavaScript, Web Sphere application server 10.2, Angular 2.0, web services, Quick Build, Jira, tortoise HG, Gitkarkane, Log4j, Eclipse/MyEclipse, Mercurial In.

AT&T Richardson, TX

Jul 2016 – Jun 2017

Alta, Ebiz Registration

Java/J2EE Developer

Description: To consolidate user id experience for all AT&T Business customers to have single point of entry for BD, BC and CP using CSO IAM platform. Initiative will deliver a common user Identity and Access Method (IAM) platform for all AT&T Business customers using Business Center as the single point of entry for their Business Solutions Digital Experience.

- Involved in daily SCRUM meetings and internal developer status calls along with the offshore team.
- Gathering the requirements from the Business team (System Engineer) analyzing them and clarifying issues by coordinating with the team before each sprint
- Review User Stories and the test cases associated with the story to predict the efforts needed to implement the story.
- Updated the old code as per the new requirements which arise in Agile based development environment.
- Implemented the UI of the project using HTML5, CSS, jQuery, Java Script, Required JS, Angular JS AJAX
- All the functionality is implemented using Spring IO / Spring Boot, Hibernate ORM. Implemented Java EE components using Spring MVC, Spring IOC, Spring transactions and Spring security modules.

- Developed front-end code with Ajax call in AngularJS and jQuery to retrieve data as JSON Object from controllers in back-end RESTful Server, then display the well-organized result in web pages by writing AngularJS controller, directives, services, and route providers. Also used Angular.js filter to make the data searchable and sortable.
- Implemented both Restful and SOAP web services depending on the design need of the project.
- Responsible for creating and maintaining architecture for Restful API using Spring Boot.
- Developed Synchronous and Asynchronous Ajax calls
- Used SVN and GIT repo to pull and push the code.
- Designed application components using Java Collections and providing concurrent database access using multithreading.
- Developed complex SQL queries to insert, query and update the database.
- Implemented ID conditioning to restrict user access to certain parts of the application.
- Extensively worked with QA team coordinating testing and automation cycles.
- Provided end-to-end effort estimate for complete projects.

Environments: Java 1.6, spring 4.0, spring MVC, Spring boot 1.2.3, hibernate, JDBC, JSP, OSGi, oracle 11g, SQL, html, CSS, JavaScript, AngularJS2.0, jQuery, WebLogic application server 10.2, JSON beans, ATG forms, web services, soap UI, Rest, JAXB, tortoise SVN, Jenkins, QC(ALM), agile methodology.

DWSS Portal applications OASIS & EAP

Jul 2015 – Jun 2016

Full Stack developer

Description: OASIS is a case Management and payment Web Application that provides services designed to assist TANF and SNAP Households become self-sufficient primarily through training, employment, and wage gain.

Responsibilities:

- Involved in SDLC Requirements gathering, Analysis, Design, Development and Testing of application using Agile Model.
- Developed web application using Spring MVC framework.
- Designed and developed intranet web applications using JavaScript and CSS.
- Implemented Web Design based on CSS3, HTML5, and Bootstrap Front-End Framework.
- Used Spring Inversion of Control, to make application easy to test and integrate.
- Used Auto wired POJO and DAO classes with Spring Controllers.
- Functionalities include writing code in HTML, CSS, JavaScript, jQuery, Ajax, JSON, AngularJS, and Bootstrap with MySQL database as the backend.
- Web application development for backend system using AngularJS with cutting edge HTML5 and CSS3 techniques.
- Utilized Spring annotations and XML configuration for Dependency Injection.
- Implemented Spring MVC framework and integrated all products with web services.
- Provided connections using Spring JDBC to the database and developed SQL queries to manipulate the data.
- Used Log4j to print the logging, debugging, warning, info on the server console.
- Created WAR and EAR files for deployment in the Development environment. Developed Event Logging & Error Reporting application using Servlets.
- Written SQL queries, stored procedures modifications to existing database structure as required per addition of new features.
- Involved in bug fixes, enhancements, and code refactoring.

Environment: Java 1.6, Spring, Hibernate, JDBC, JSP, CSS, HTML, JavaScript 1.6, Web services, SOAP, WSDL, SOAP UI, Maven, Junit, Web Logic, Windows 8.1. Maven, CVS, Eclipse, Oracle 10g/11g, Microsoft VISIO, XML.
