EDUCATION

- **Maharishi International University** Fairfield, IA
Master of Science in Computer Science; GPA: 3.79 *Aug. 2019 – Dec. 2021*
- **Khulna University of Engineering and Technology** Khulna, Bangladesh
Bachelor of Science in Electronics and Communication Engineering; GPA: 3.38 *Feb. 2012 – Apr. 2016*

EXPERIENCE

- **Amazon** Seattle, WA
Software Engineer (3 years) *Sept 2021 - Sept 2024*
 - **Digital Subscription Upsell on Product Page:** Designed and implemented an upsell feature for Amazon-owned device detail pages, achieving a 10% engagement rate (approx. 150K/month). Tech stack was based on **Java** RESTApi-based distributed system using **Spring Boot** and **AWS** to scale globally, reaching millions.
 - **Compatible Device Upsell on Subscription Page:** Developed a high-engagement widget serving 100K visits per second with a 15-20% interaction rate. Leveraged **Java**, **React**, and **AWS** for real-time user engagement insights, defining key metrics to monitor widget performance.
 - **Editorial Recommendations on Search Page:** Launched and scaled a recommendation widget across U.S., U.K., and India markets, significantly boosting customer engagement. Collaborated with product teams to translate requirements into well-defined technical solutions.
 - **Customer Also Bought Recommendation:** Implemented an AI-driven recommendation system across high-traffic pages, based on a distributed RESTApi microservice architecture leveraging messaging queues (**SNS/SQS**) for event-driven recommendations. Established **monitoring metrics** and dashboards to ensure service health.
- **JP Morgan & Chase** Wilmington, DE
Java Consultant (3 months) *May 2021 - Jul 2021*
 - **Security Transaction & Management System:** Assisted in middleware deployment, server security, and **Cassandra** database management. Used **Spring** for back-end services and integrated with cloud technologies, streamlining secure, high-availability solutions for financial transactions.
- **McCright & Associates** Chattanooga, TN
Senior Software Engineer (11 months) *Jun 2020 - Apr 2021*
 - **Housing Inspection App:** Led the development of an Android application in **Kotlin** for housing inspection and asset management, managing team resources to migrate a legacy PHP app to a mobile-first solution, improving user experience and performance.
 - **Leadership Responsibilities:** Managed a team of four engineers, delegating tasks, conducting regular meetings, and ensuring seamless execution. I collaborated with housing inspectors to test changes in controlled environments before rolling out updates gradually, minimizing disruptions and ensuring system stability.
- **Samsung R&D Institute Bangladesh** Dhaka, Bangladesh
Software Engineer (2 years 3 months) *Sept 2016 - Dec 2018*
 - **Gear 360 Manager Android & Smart Health IOS App:** Developed robust health applications, integrating smart device data management and ensuring seamless data synchronization. Enhanced media-sharing features for the Samsung Gear 360 app, improving user engagement and feature accessibility for thousands of users within the Samsung ecosystem.
 - **Authentication, Security & Connectivity:** Implemented **OAuth 2.0** authentication for the LifeQ IOS application using Gmail and LinkedIn, enhancing security and user accessibility. Played a key role as a Connection Manager for Smart Devices, ensuring efficient communication between applications and wearable devices using **Bluetooth**.

PROJECTS

- **Short Title Generator:** Developed an LLM-based system to generate concise Amazon product titles, optimizing prompt engineering to enhance title quality. Technologies: **Python**, **AWS Lambda**.
- **SQL Queries Generator:** Created an algorithm to translate natural language into SQL queries, leveraging Stanford's dependency parser and semantic analysis. Technologies: **Python**, **Stanford Parser**.
- **Blockchain Implementation Using HyperLedger:** Implemented a secure peer-to-peer sharing platform, utilizing **HyperLedger** for decentralized data integrity.
- **Web Shop Application:** Designed an application for predictive analytics using **Java**, **Hadoop**, and **Docker** to process large data volumes and accurately predict user events. Technologies: **Scala**, **Hadoop**, **Docker**.
- **Image Watermarking Scheme Based on Interpolation and Cellular Automata:** Watermarking Image processing technique developed using interpolation and cellular automata, presented at ICERIE 2017. Technologies: **C**, **MATLAB**.

PROGRAMMING SKILLS

- **Languages:** Java, Python, Kotlin, JavaScript, SQL, Cassandra, Scala, Swift
- **Technologies:** AWS, React, Docker, RESTApi, Hadoop, Kafka, Cassandra, Spring Boot, IntelliJ, Git, Jenkins, Jira
- **Methodologies:** Object-Oriented Programming, Agile (Scrum), Test-Driven Development (TDD)
