

Deepika Tanna

tannadeepika9@gmail.com | phn: 219-386-7593 | [LinkedIn](#)

PROFESSIONAL SUMMARY

- **Senior Sdet** with 7+ years of experience leading the analysis, design, development, implementation, and testing of mobile, web, backend, and client-server applications, ensuring high-quality deliverables and alignment with business objectives.
- **Expert in Quality Assurance**, driving both manual and automated testing strategies, including regression, system integration, functional, and smoke testing, to deliver robust software solutions across distributed QA teams.
- **Collaborative Leader**, working closely with cross-functional teams to identify, report, and resolve defects, while managing dependencies to ensure smooth software development and deployment cycles.
- **Architect of Automation Frameworks**, designing and maintaining scalable and efficient frameworks to streamline test case execution and maintenance, continuously improving processes to enhance software quality and accelerate time-to-market.
- **Proficient in UI Automation**, leveraging Selenium WebDriver, Cypress, and Playwright to develop and execute complex test scripts, ensuring consistent and responsive web applications across multiple browsers and platforms.
- **Advanced Framework Integration**, integrating Selenium WebDriver with TestNG and JUnit to enable parallel test execution and detailed reporting using Extent reports for actionable insights.
- **End-to-End Testing Specialist**, building and managing Cypress-based frameworks to enhance UI testing efficiency and achieve comprehensive test coverage for web applications.
- **Performance Optimization Expert**, utilizing Playwright for parallel test execution, significantly reducing test cycles and enabling faster release timelines.
- **BDD Advocate**, implementing Behavior-Driven Development (BDD) with Cucumber and Gherkin to foster collaboration across teams and create maintainable, scalable test scripts.
- **Framework Innovator**, designing and maintaining diverse Test Automation Frameworks (Keyword, Data-Driven, Hybrid) using the Page Object Model (POM) design pattern.
- **Mobile Automation Leader**, developing and executing Appium-based frameworks to ensure extensive test coverage for Android and iOS platforms, automating native and hybrid apps for improved efficiency and consistency.
- **API Testing Specialist**, creating and executing test cases for SOAP and RESTful web services using SoapUI and Postman, and automating API testing with Rest Assured in Java.
- **RESTful API Validator**, designing and implementing automated test scripts with Rest Assured to validate endpoints, data accuracy, and response times across multiple services.
- **Database Testing Pro**, evaluating relational databases (SQL Server) and NoSQL platforms (DynamoDB) for application development and testing, ensuring data integrity and performance.
- **Load and Performance Testing Expert**, conducting performance testing using JMeter, LoadRunner, and NeoLoad to optimize high-traffic applications and ensure scalability.
- **CI/CD Integration Specialist**, integrating automated scripts into CI/CD pipelines using Jenkins, Maven, and Git/Bitbucket to streamline testing processes and support continuous delivery.
- **Agile Practitioner**, proficient in Agile and Scrum methodologies, including sprint planning, reviews, retrospectives, daily scrums, and backlog grooming, ensuring seamless collaboration and on-time project delivery.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, C#, Typescript, HTML, XML, CSS
- **Automation Tools & Frameworks:** Selenium, Cypress, Playwright, TestNG, REST Assured, Postman, JUnit, pytest, Mockito
- **Mobile Testing Tools:** Appium, Espresso, XCUITest
- **Performance Testing Tools:** JMeter, Gatling, LoadRunner, Neoload
- **BDD(Behavior-Driven Development) Tools:** Robot Framework, Cucumber
- **API Testing Tools:** REST, SOAPUI, Swagger, OpenAPI, GraphQL
- **CI/CD & DevOps Tools:** Jenkins, TeamCity, Docker, GitHub Actions, Kubernetes, Terraform
- **Cloud Platforms:** AWS, Azure, GCP
- **Cloud Testing Platforms:** BrowserStack, Lambda Test, Sauce Labs
- **Databases& Backend:** MySQL, SQL Server, Oracle, MongoDB, Spring Boot, .NET Core, Node.js
- **Reporting Tools& Project Management Tools:** Allure, ExtentReports, Jira, Confluence, XRAY, TestRail
- **Security Testing:** OWASP ZAP, Burp Suite, SonarQube
- **Testing Methodologies:** Functional, Regression, Integration, System, UAT, End-to-End, Smoke, Sanity, Performance, API, Mobile, Cross-Browser testing(including Chrome, Edge, Firefox, Safari, IE).

SENIOR SDET

[March 2023 - Present]

American Express | [Phoenix, AZ]

- Guided and supported junior SDETs by offering expertise in **test automation strategies**, conducting thorough **code reviews**, and sharing effective **debugging techniques** to enhance their skills.
- Promoted a culture of continuous improvement by organizing regular **training sessions** on **cutting-edge testing tools** and **methodologies**, which significantly boosted team productivity and knowledge.
- Offered technical leadership in the design and implementation of **test automation frameworks**, ensuring high-quality and efficient code through meticulous **reviews** and **troubleshooting** of testing challenges.
- Built and maintained automated test scripts using **Selenium WebDriver** with **Java**, increasing test coverage and reliability for web applications, while leveraging **Mocha** as the **test runner** for structured reporting and test suite management.
- Led the transition from **Selenium WebDriver** to **Cypress**, utilizing the **Mocha** framework to improve testing efficiency and developer productivity.
- Refactored and optimized **Selenium WebDriver** test cases into **Cypress**, capitalizing on its advanced features for quicker execution and greater reliability, and implemented **Cypress's automatic waiting mechanisms** to minimize flaky tests and enhance stability.
- Developed a scalable and maintainable test automation framework for **REST APIs** using **Rest Assured** and **Java**, enabling comprehensive validation of API endpoints for **regression, functional, and integration testing**.
- Configured **TestNG** to manage automated test suites, enabling **parallel execution, test grouping, and prioritization**, which accelerated feedback cycles and optimized test efficiency across different environments and data sets.
- Designed and implemented automated UI tests for Android applications using Espresso with Kotlin/Java, ensuring fast and reliable validation of user interactions while integrating seamlessly with CI/CD pipelines for continuous testing.
- Delivered end-to-end mobile test automation solutions using **Appium** for **Android and iOS** platforms, integrating **TestNG** for effective test management and reporting, and leveraging **real devices and emulators** for cross-device compatibility.

- Performed performance testing using **JMeter** with **Java** and **JUnit**, creating **load and stress test scenarios** to evaluate system responsiveness and scalability under varying user loads.
- Developed robust unit test suites using **JUnit**, focusing on complex business logic and **edge cases** to improve test coverage and identify critical issues early in the development lifecycle.
- Established and maintained **CI/CD pipelines** to automate **build, test, and deployment processes**, ensuring faster and more reliable software delivery.
- Integrated **Jenkins** with **Git** for **automated triggers and test execution post-commit**, configuring **Jenkins pipelines** to include **build triggers, post-build actions**, and seamless integration with test suites.
- Created and optimized **SQL** scripts to validate **data integrity during backend testing**, supporting **data-driven testing** with automated queries to ensure accurate validation of complex business logic.
- Executed **cross-browser and cross-platform testing** across **Firefox, IE, Chrome, Mac, Unix, and Windows** to ensure consistent application performance.
- Standardized **QA processes and best practices** across projects, ensuring **consistency and high-quality testing outcomes**.
- Actively engaged in walkthroughs, inspections, reviews, and user meetings to align **testing efforts with project goals and stakeholder expectations**.

QA AUTOMATION ENGINEER

[December 2019 - December 2022]

Thermo Fisher Scientific | [San Jose, CA]

- Incorporated customer feedback into QA processes to align testing strategies with end-user expectations, ensuring a seamless user experience.
- Identified and resolved cross-browser compatibility challenges, ensuring consistent functionality across multiple web browsers.
- Developed and implemented **end-to-end test suites** leveraging **Playwright and TypeScript**, significantly improving UI test coverage and defect detection.
- Optimized test execution by utilizing **Playwright Test's parallel execution**, accelerating feedback loops and enhancing overall efficiency.
- Created **custom reporting solutions for Playwright Test results** in **TypeScript**, providing stakeholders with actionable insights and improving test visibility.
- Designed and executed **manual API test cases** in **Postman**, ensuring accuracy in request/response validation, status codes, headers, and data formats.
- Automated **BDD-based API testing** with **Rest Assured, Cucumber, and Java**, developing **Gherkin-style feature files** to validate RESTful web services for functional and regression testing.
- Implemented reusable **Cucumber step definitions and hooks** in **Java**, integrating **Rest Assured** for streamlined API validation and maintainable automation frameworks.
- Developed and executed **automated XCUI tests for iOS applications** using Swift, ensuring robust validation of UI components and user workflows in alignment with functional requirements.
- Integrated **XCUI test suites into CI/CD pipelines** using Xcode Server and Fastlane, enabling continuous testing and early detection of UI regressions in the development lifecycle.
- Automated mobile testing for **native and hybrid applications** using **Appium with Java and TestNG**, enhancing test efficiency and execution reliability.
- Developed **cross-platform mobile automation scripts in Java with Appium**, reducing the need for separate platform-specific test cases.
- Conducted **load and performance testing** with **NeoLoad**, proactively identifying system bottlenecks and improving application stability under various user loads.
- Integrated **NeoLoad** into **CI/CD pipelines**, enabling automated performance validation alongside functional tests to enhance software quality and accelerate release cycles.

- Automated **API testing workflows** by integrating **Rest Assured** and **BDD Cucumber** into **Jenkins** and **Bitbucket**, ensuring continuous validation across multiple environments with real-time failure reporting.
- Performed **database validation** on **SQL Server**, executing complex queries to verify data integrity and ensure seamless application-to-database interactions.
- Played a key role in drafting and structuring **Test Plans and Test Cases**, ensuring comprehensive test coverage.
- Actively participated in **requirement reviews and business meetings**, gaining a deep understanding of functional specifications to align testing efforts with business objectives.

QA ANALYST

[September 2017 - December 2019]

NOVARTIS | [HYDERABAD, INDIA]

- Collaborated with clients to understand their **quality standards** and provided transparent updates on **testing progress, results, and key findings**, ensuring alignment with project expectations.
- Focused on **user experience (UX) testing**, validating application intuitiveness and user-friendliness to meet end-user requirements effectively.
- Prepared **test reports for releases**, documenting defects and recommendations for stakeholders.
- Developed **UI automation frameworks** using **Selenium WebDriver with TestNG (Java)**, streamlining test case organization, execution management, and report generation.
- Conducted **cross-browser testing** leveraging **Selenium WebDriver**, ensuring seamless application functionality across **Chrome, Firefox, Safari, Edge, and Internet Explorer**.
- Optimized test accuracy by utilizing **Selenium WebDriver's direct interaction with browser-native APIs**, enabling more precise and reliable user interaction automation.
- Designed and maintained **API test suites in Postman**, organizing test cases into collections and validating endpoints (**GET, POST, PUT, DELETE**) for data integrity across **JSON and XML** response formats.
- Utilized **Postman's environment variables and global settings** to streamline API testing across **development, staging, and production** environments, improving test maintainability and efficiency.
- Performed **manual API testing** using **SOAP UI**, validating **WSDLs, request/response payloads, HTTP status codes, and response times** to ensure **SOAP and REST API** compliance.
- Conducted **functional and regression testing** on web services by crafting **SOAP requests**, applying assertions on **XML structure and values**, and ensuring adherence to API specifications.
- Executed **load and performance tests** using **LoadRunner**, simulating varying load conditions to identify performance bottlenecks and ensure system scalability.
- Created **LoadRunner scripts for stress-testing**, ensuring comprehensive performance coverage.
- Analyzed **performance metrics** with **LoadRunner's monitoring tools**, generating detailed reports and visualizations to support **capacity planning and optimization**.
- Wrote **complex SQL queries** to validate **data integrity, consistency, and accuracy** across multiple database tables, facilitating robust **data-driven testing**.
- Integrated **automated tests** into **CI/CD pipelines** using **Jenkins and Maven**, enabling seamless test execution and rapid feedback on code changes.
- Configured **Jenkins** to automate **build, test, and deployment** workflows, leveraging **Maven** for efficient project management and test execution.
- Incorporated **Selenium for UI automation** and **Rest Assured for API testing** within the **Maven build process**, ensuring end-to-end test coverage.
- Enabled **Jenkins to trigger automated tests on code commits**, providing **real-time feedback** and detailed test reports to accelerate defect identification and resolution.
- Strengthened **code quality** and reduced development cycle times by proactively **analyzing defects and root causes**, minimizing system impact and ensuring seamless software delivery.
