
PROFESSIONAL EXPERIENCE

- Over 6+ years of experience in Java programming and Various DevOps-based implementation projects.
- Extensive experience in DevOps essential skills like continuous integration, continuous deployment, continuous delivery, supporting Build Pipelines Release management, configuration management (Infrastructure as a code), and cloud computing.
- Experience in writing many ad-hoc scripts using many popular different languages like Python, Ruby, and Shell-based scripting.
- Solid understanding of Software Development Life cycles like Waterfall methodology, agile methodology, and Scrum.
- Self-starter with an in-depth level of understanding of the strategy and practical implementation of AWS cloud-specific and OpenStack technologies.
- Hands-on experience in AWS provisioning and good knowledge of AWS services like Puppet, EC2, S3, Route 53, CloudFormation, Elastic Bean Stalk, VPC, EBS, etc., Knowledge of application deployment and data migration on AWS.
- Develop automation and processes to enable teams to deploy, manage, configure, scale, and monitor their applications in data centers and the cloud.
- Upgraded load balancers from R\dware to F5 BigIP v9, which improved functionality and scalability in the enterprise.
- Prior experience working with common developer tool chains to achieve Continuous Integration. (Jenkins, Bamboo, TeamCity).
- Integrating Jenkins with Testing Frameworks like SOAP, Cucumber.
- Experience with Version Control System (VCS) like GIT, GIT-Hub, Git Stash SVN. Good hands-on Knowledge as a Bamboo build engineer to create build and deployment plans.
- Experience in implementing and administering monitoring tools Splunk and Zabbix, Sensu, Cacti, Nagios, Cacti.
- Solid understanding of current web and internet technologies like Apache, Tomcat, Nginx, MongoDB, Cassandra, Elastic search, and Memcache.
- Extensively worked with change-tracking tools like BMC Remedy and JIRA and used these tracking, reporting, and managing bugs.
- Experience in administrating, deploying, and managing Ubuntu, CentOS servers.
- Extensively experienced in building automation tools like ANT, MAVEN, and Gradle and have a good working knowledge of these tools.
- Great experience with Docker container service.
- Deep expertise in building and breaking cloud-scale systems, with a focus on Information Security, Data Stewardship, User Authentication, Network Security, Key Management, and Resource Isolation.
- Highly organized, able to multi-task, and the ability to work individually, within a team, and with other groups.

WORK EXPERIENCE

Azure DevOps Engineer

Biogen, Atlanta, GA

Mar 2023 - Present

- Working with the team and gathering prerequisites from product managers of the required Machine Learning Applications that are expected to migrate to Azure for better laas and checking that the documented needs precisely and completely communicate the requirements and expectations of the client.
- Configuring and working with advanced DevOps tools using GIT, Jenkins, Ansible, Nexus, SonarQube, Kubernetes Orchestration, Terraform, and Docker Containerization platforms for automating and managing infrastructure.
- Designing and developing IAAS (Infrastructure as a Service) for migration of On-Premises Applications into AWS Cloud platform and its features which includes provisioning services Virtual Network, Subnets, Storage Accounts, Load Balancers, Virtual Machines, Private Links, Cosmos DB, EventHub's, Security networks, Azure Container Registry, Azure Kubernetes Service and ARM Templates including provisioning services using Terraform.
- Setting up AKS (Azure Kubernetes Services), a container orchestration platform on Cloud to deploy our applications onto it for better scaling and performance of the application and, Developing Continuous Integration and Continuous Deployment of our applications using Azure DevOps onto AKS (Azure Kubernetes) to achieve zero downtime of applications for our customers.
- Working on designing custom application images (Docker files) to develop custom managed applications of ours and push them to ACR (Azure Container Registry) using Azure DevOps for further usage and development.
- Automating the deployment of applications on Cloud environment using Ansible and Python.
- Setting up Azure infrastructure using terraform templates and deploying microservices to AKS and pushing the images to ACR using Azure DevOps.
- Configured all aspects of CI/CD pipeline for one of the first projects to move to Kubernetes environment, including creating a multi-branch Jenkins pipeline to build docker image, configuration of Kubernetes environments and deployment of the images to that environment.
- Forced increased velocity of adoption of ingress methods for Kubernetes cluster by leading a Proof-of-Concept effort to evaluate Istio/Envoy ingress.
- Built and deployed Docker containers to break up monolithic app into microservices, improving developer workflow, increasing scalability, and optimizing speed
- Involved in creating HDINSIGHT cluster in MICROSOFT AZURE PORTAL; also created EVENTHUB and AZURE SQL

DATABASES

- Forced increased velocity of adoption of ingress methods for Kubernetes cluster by leading a Proof-of-Concept effort to evaluate Istio/Envoy ingress.
- Configured all aspects of CI/CD pipeline for one of the first projects to move to Kubernetes environment, including creating a multi-branch Jenkins pipeline to build docker image, configuration of Kubernetes environments, and deployment of the images to that environment.
- Lead the adoption of Kubernetes by acting as a resource providing knowledge gained in being one of the first to embrace the Kubernetes
- Improved reliability and performance of the Kubernetes platform by working with the team responsible for Kubernetes support.

Environment: RedHat, Ubuntu, Kubernetes, Docker, AKS, ACR, Azure, Ingress, Jenkins, Azure DevOps, Ansible, Python, Azure Key vaults.

AWS DevOps Engineer

GM Financial, Dallas, TX

Jun 2022 - Feb 2023

- Managed Git repositories by implementing effective branching strategies, tagging, and release branch creation, reducing merge conflicts by 25% and streamlining version control for faster releases.
- Built and optimized CI/CD pipelines in Concourse, automating builds, testing, and deployments, resulting in a 30% improvement in delivery speed across multiple projects.
- Integrated security tools like White Source into build pipelines, identifying and mitigating 95% of vulnerabilities during the early stages of development.
- Automated versioning with Semantic Versioning and stored version files in S3, improving artifact management efficiency by 40%.
- Designed reusable Concourse YAML templates, cutting workflow setup time by 50% and ensuring consistency across 10+ development teams.
- Configured application load balancing using GKE's built-in and external load balancers, achieving 99.9% application uptime and supporting seamless scaling for high-traffic applications.
- Improved code quality by implementing SonarQube Pull Request analysis, addressing test coverage gaps, reducing code duplication by 20%, and mitigating vulnerabilities proactively.
- Automated AWS infrastructure provisioning with Terraform and Ansible, reducing provisioning time for EC2 instances, VPCs, and security groups by 60%.
- Leveraged Spinnaker for zero-downtime deployments, integrating monitoring tools to reduce pipeline issue resolution time by 35%.
- Transitioned traditional infrastructure to serverless solutions using AWS Lambda, API Gateway, and S3, cutting infrastructure costs by 30% and improving scalability.
- Deployed containerized applications using Docker and Kubernetes, enabling horizontal scaling and reducing deployment failures by 25%.
- Automated configuration management tasks with Puppet and Ansible, including setting up ELK stacks, improving log monitoring efficiency by 40%.
- Secured sensitive credentials within CI/CD workflows using HashiCorp Vault, eliminating manual errors and enhancing security compliance.
- Created automation scripts in Groovy, Shell, and Bash, accelerating deployment and administrative tasks by 20%.

Environment: .Net, AWS, Concourse, Docker, Hashicorp Vault, Git, Shell, Bash, Python, J Frog, SonarQube, Jenkins, GIT, EC2, Ansible.

Java DevOps Engineer

Cognizant, India

Mar 2020 - July 2021

- Working with the business analysts to review the requirements and preparing technical specifications document.
- Developed web-based user interface using Struts, JSP, JavaScript, AJAX technologies.
- Developed forms validation using JavaScript and used Struts validator mechanism for server side validations.
- Designed and implemented Subversion and GIT metadata including elements, labels, attributes, triggers, and hyperlinks
- Used ANT and MAVEN as build tools on Java projects for the development of build artifacts on the source code.
- Introduced, Installed, and Configured Team City for Continuous Integration.
- Introduced, Installed, and Configured Team City for Continuous Integration.
- Worked on sprint backlog and product backlog to implement system setup, user logging activity, database design and implementation, and GUI development.
- Program using Java, Spring, Hibernate and MySQL, JUnit, JSP, and Velocity
- Updating the SVN log properties for revisions. Setting up the SVN sync servers, changed rev properties for SVN sync.
- Used JQuery to display a slideshow of available items and display a data table with column sorting.
- Configured application server to create the data source for database connection pool.
- Designed and developed XML presentation using CSS & XSLT.
- Created Web Service implementation class and deployed to web application server.
- Used "ANT" to build the application and Subversion as source code control system.

Environment: Java 5.0, Git, Servlets 2.4, JSP 1.2, JSF, ANT, SVN, Hibernate 3.0, JUnit, XML, JSON, Web Services, Java Script, CSS, Ant, SQL.

DevOps Engineer

Wipro, India

Aug 2017 - Feb 2020

- Working with the business analysts to review the requirements and preparing technical specifications document.
- Installed and configured Solaris 8,9,10 using CD media, Jumpstart, and RHEL 4.x, 5.x using CD media, Kickstart.

- Administered and troubleshooted Solaris and RHEL installed on Sun Fire and IBM blade.
- Implemented system upgrades, including hardware, operating system, and patch upgrades.
- Made backups of the directories and files using the tar, gzip, and gunzip tools.
- Wrote Shell scripts for monitoring the systems and applications, such as monitoring the processes in all the servers, and also ran cron jobs using Cron and at.
- Managed volume and file system using VxVM, SVM, and ZFS on Solaris and LVM in Linux.
- Configured NFS on Solaris and Linux servers.
- Installed Apache Web Server, Web Logic Application Server, and Oracle database in the servers.
- Configured domains, admin, and managed servers in Web Logic application server to deploy Web/Enterprise applications.

Environment: Sun Solaris 8, 9, 10, Redhat 4.x, 5.x, IBM Blade, RHN satellite server, Sun update manager, cron, scripting, VXVM, SVM, ZFS, LVM, Apache, BEA WebLogic 8.1, and Oracle 9i.

WEB SERVICES

- **CI/CD & DevOps:** Built and managed robust CI/CD pipelines across multiple environments, utilizing tools such as Jenkins, Git, GitHub, Bitbucket, Docker, Kubernetes, and Ansible. Improved deployment speed by 40% and reduced deployment errors by 30%.
- **Infrastructure as Code:** Provisioned and managed infrastructure using Terraform and CloudFormation, automating configuration management with Ansible playbooks, reducing setup time by 50%.
- **Cloud Platforms:** Automated tasks on AWS (EC2, S3, IAM, RDS, etc.) and Azure using CLI and ARM templates, leading to a 25% reduction in manual processes and ensuring consistent configurations.
- **Containers & Orchestration:** Deployed and scaled applications with Docker and Kubernetes, achieving 99.9% application uptime, and streamlined container management using OpenShift.
- **Scripting & Automation:** Automated repetitive tasks with Python, YAML, JSON, and BASH, cutting manual workload by 35% and enabling faster response to operational needs.
- **Monitoring & Troubleshooting:** Monitored systems using Nagios and CloudWatch, reducing system downtime by 20% and mean time to resolution (MTTR) by 40%.
- **Cloud Security & Optimization:** Designed secure, scalable, and cost-effective cloud solutions leveraging AWS tools like ELB, AMIs, and CloudFront. Optimized resource allocation to cut cloud costs by 15%.
- **Version Control & CI:** Expert in Git and Jenkins, deployed Java applications in WebLogic and Tomcat environments with 95% deployment success rates.
- **SDLC & Agile:** Collaborated across Agile teams to deliver projects on schedule and within scope, improving sprint goal achievement rates by 25%.

TECHNICAL SKILLS

Application/Web Server: Oracle Web logic Server 11g, Apache Tomcat, Fusion Middleware SOA Suite 10g/11g, Oracle **Application Server** 10g BEA WebLogic 8.1/9.2, WebSphere, JBoss, IIS
Web Services/Technologies: HTML, XML, SOAP, Ngnix, WSDL, UDDI, XSD, XSL, XPATH
Databases: MySQL, Oracle 9i/10g, SQL Server 2005, 2008.
Operating Systems: Unix, Linux, iOS, WINDOWS NT/2000/2003/XP/vista/7
Scripting Languages: Linux Shell scripting, Python, Ruby, Perl, PowerShell, Java Scripting, Java
Version Control Tools: GIT, SVN, IBM ClearCase, Perforce.
DevOps: MAKE, Jenkins, Hudson, Ansible, Chef, Puppet, Amazon web services (AWS), Cloud formation, EC2, S3, Cloud Front, Route 53, Ant, Maven, and Docker container

EDUCATION

- | | |
|--|-------------------|
| • Master's in IT, Gannon University, Erie, PA | 2021- 2023 |
| • Bachelor's in IT, JBREC, India | 2014-2018 |

CERTIFICATIONS

- AWS Developer Associate
- Certified Kubernetes Administrator

KEY ACHIEVEMENTS

- **Infrastructure Automation:** Implemented infrastructure as code, provisioning 100+ resources with Terraform and Ansible.
- **Cost-efficient Architecture:** Transitioned 70% of infrastructure to serverless, cutting costs by 30% monthly.
- **Container Management Success:** Led team to manage 200+ containers, enhancing application scalability and performance.
- **Deployment Efficiency Boost:** Automated deployment pipelines reduced deployment time by 50% using Concourse and Jenkins.
