👤 Profile

Salesforce-certified professional with a strong 5 plus years of expertise in designing, developing, and optimizing Salesforce solutions across diverse industries including Research, healthcare, and e-commerce domains. Proficient in Salesforce setup and configuration, creation of custom objects and fields, flow automation, workflows, Process Builder, Flow Builder, roles, and profiles, Apex programming, Lightning Web Components (LWC). I am an expert in data management, security protocols, and integrating Salesforce with external systems using RESTful APIs. Committed to delivering solutions for business process optimization and user engagement. Earned Ranger badge with over 150 plus badges in Trailhead, demonstrating expertise in business automation, application development, and system administration.

💼 Professional Experience

Unified Tech Group (Client: Verily Life Sciences)

Jul 2024 – present | Dallas, USA

Engineer - Technology (Salesforce)

- Improved clinical workflow efficiency by designing Apex-based automation for patient and research data processing, reducing manual effort by 45% across Sales and Service Cloud.
- Migrated legacy Aura components to Lightning Web Components (LWC), using JavaScript, wire services, and Base Lightning Components, resulting in 50% faster page load times and better modularity.
- Applied object-oriented design patterns to build reusable Apex service classes and trigger frameworks, ensuring high maintainability and 90%+ test coverage.
- Implemented Salesforce Org-to-Org integration using Connected Apps, OAuth 2.0, Named Credentials, and Apex callouts, enabling automatic replication of object records across orgs in real time.
- Ensured compliance with governor limits by bulkifying logic and optimizing queries, avoiding runtime exceptions in high-volume data operations.
- Strengthened platform security and compliance (HIPAA-aligned) by configuring Salesforce Shield, including Field Audit Trail, Event Monitoring, and Platform Encryption to track data access and changes.
- Configured CORS, SSO, and JWT-based authentication for secure third-party integrations with internal health systems and portals.
- Built advanced dashboards and reports in Salesforce to track key performance metrics for clinical and commercial teams, enabling real-time insights and improving cross-functional collaboration.
- Customized Sales Cloud features like Opportunity Stages, Path, and Lead Assignment Rules to align with Verily's sales process, increasing CRM adoption across sales teams.
- Improved release reliability by setting up CI/CD pipelines using Git, VS Code, and Salesforce CLI, supporting automated deployments and source-controlled development across sandboxes and production.

Montclair State University

Jan 2023 – May 2024 | New Jersey, USA

Research Assistant (Salesforce Developer/ Administrator)

- Streamlined student case tracking by implementing Salesforce Service Cloud for 5+ departments, enabling real-time resolution workflows and reducing average response time by 40%.
- Automated query creation and updates by building custom Flows and Process Builder logic triggered by student form submissions, resulting in a 30% faster case resolution rate.
- Improved case routing accuracy by designing Assignment Rules, Queues, and Escalation Rules based on department, issue type, and priority, increasing SLA compliance to 95%.
- Enabled multi-channel query intake by configuring Email-to-Case and Web-to-Case integrations, reducing manual data entry and improving case volume handling by 25%.
- Enhanced case management efficiency by building dynamic Lightning record pages with conditional components and Quick Actions, reducing clicks-to-resolution by 20%.
- Empowered support staff by creating and embedding Knowledge Articles into the Service Console, reducing repetitive queries and lowering training time for new agents.
- Delivered visibility into team performance by developing custom dashboards and reports for academic and admin teams, improving data-driven decision-making across student services.

- Protected sensitive student data by configuring field-level security, OWD, permission sets, and profiles, ensuring compliance with FERPA and internal data privacy policies.
- Maintained system reliability by writing Apex test classes with 90%+ coverage and deploying validated changes via Change Sets to sandbox and production environments.
- Collaborated with university stakeholders to conduct UAT and iteratively refine Service Cloud features based on academic workflows and student feedback.

LTIMindtree Pvt Ltd

Aug 2020 – Dec 2022 | Bangalore, India

Engineer Salesforce Developer

- Customized and deployed Sales Cloud features including Opportunity Stages, Lead Assignment Rules, and Path configurations to align with Adidas' sales lifecycle, improving team productivity and CRM adoption.
- Improved system scalability and performance by implementing Batch Apex, Future methods, and Scheduled Jobs to process high-volume data within Salesforce governor limits, reducing processing time by 40% for time-sensitive onboarding workflows.
- Accelerated new hire onboarding by building a scalable portal using Apex triggers, bulkified SOQL/SOSL queries, and Lightning Components, reducing manual efforts and increasing operational efficiency by 35%.
- Enhanced customer engagement and UI performance by developing modular and responsive Lightning Web Components (LWC) using JavaScript, HTML, and CSS, improving client satisfaction scores by 20%.
- Enabled seamless cross-system data flow by integrating Salesforce with external platforms using REST APIs, SOAP, and Streaming APIs, resulting in real-time updates and reducing data sync delays by 50%.
- Delivered data-driven business insights by designing custom dashboards in Tableau CRM (CRM Analytics), helping business stakeholders track KPIs across sales channels and driving strategic decisions.
- Boosted data accuracy and productivity by automating bulk data imports and updates using Workbench, Data Loader, and Data Import Wizards, reducing data entry errors by 90%.
- Ensured compliance with Salesforce best practices by refactoring inefficient Apex code, minimizing heap size, CPU time, and DML/SOQL limits in business-critical workflows.
- Improved deployment reliability by implementing CI/CD pipelines using Git, VS Code, and Salesforce CLI, enabling version control and streamlined releases across development, QA, and production orgs.
- Collaborated cross-functionally with DevOps teams to set up scratch orgs, monitor deployments, and implement automated testing using SFDX, ensuring a stable and scalable development process.

SKILLS

Salesforce Skills: Apex, LWC, Aura Components, Visualforce Pages, Salesforce Communities, Single Sign-On (SSO), OAuth 2.0, Packaging & Deployment, REST, SOAP, BULK & Streaming APIs, Workflows, Process Builder, Flows, Metadata API, Reports and Dashboards, Page Layouts, RecordTypes, Approval Processes, Validation rules, Object relationships, OWD, Field-level Security, Profiles and Permission sets, Security and Sharing settings, User Licenses, Data Loader, Tableau, Omni Channel, Salesforce chat, Salesforce CPQ, Marketing Cloud, Mulesoft. **Build/Version control:** SFDX, VS Code, ANT, GIT, Change sets **Programming Languages:** Java, Python, C **Web Technologies:** HTML5, JavaScript, CSS, React, Node.js **Data Management:** MySQL, SOQL, SOSL **Tools and frameworks:** Postman, Workbench, Visual studio code, Microsoft Office 365, Splunk, Figma **Software Proficiency:** Agile Methodologies, JIRA, Documentation Skills, User Acceptance Testing (UAT), Debugging, Performance Tuning

Projects

Org-to-Org Integration Project | Salesforce | Apex | Connected Apps | Named Credentials | OAuth 2.0

- Designed and implemented Org-to-Org integration between two Salesforce instances using Connected Apps, Named Credentials, and OAuth 2.0, enabling secure, real-time data transfer across Verily's internal business units.
- Automated object record replication by developing Apex callouts and triggers to create corresponding records in the target org whenever a new record is inserted in the source org, ensuring data consistency and synchronization across environments.

Weather Application | Salesforce CRM | Technologies: Salesforce Flows, LWC, Apex, SOQL

- Built a real-time weather application in Salesforce to display city-specific weather data, gaining hands-on experience with Lightning Web Components (LWC), Apex, and Flows.
- Integrated external weather API using Apex callouts and displayed dynamic data through reusable LWC components.

Analysis of DOHMH Newyork Restaurant Inspection Dataset | Jupyter Notebook |Technologies: Python, SQL, Streamlit

- Developed a public-facing web application using Streamlit to analyze NYC DOHMH restaurant inspection data. Enabled interactive filtering, data analysis, and visualization for user-friendly insights.
- Implemented SQL queries and Pandas transformations to clean and process inspection data, enhancing clarity and decision-making.

Professional Consultancy Services | Web Development | Technologies: Spring Boot, Java, MySQL, Javascript, HTML

- Built a full-stack web application enabling employers to perform Create, Read, Update, and Delete (CRUD) operations on employee records based on skillset and availability.
- Implemented user authentication and session handling, ensuring secure access to employer dashboards and employee data.

 Certificates

- | | |
|---|--|
| • Salesforce Certified Platform Developer 1 (DEV 401) | • Salesforce Certified Administrator (ADM 201) |
| • Salesforce Trailhead Ranger | • Security Specialist |
| • Sales cloud and console SuperBadge | • Problem-Solving through Python(NPTEL) |
| • AWS Certified Data Engineer Associate | |

 Education

Master of Science in Computer Science and Information Technology Montclair State University Coursework: Computer Algorithms and Analysis, Web Development, Database Systems, Computer Security, Computer Networks, Human-Computer Interaction	May 2024 New Jersey, United States
---	--------------------------------------

Bachelor of Technology in Electronics and Communication JNTUH Coursework: Object-Oriented Programming through JAVA, Database Management Systems, Embedded Systems, Programming and problem-solving through C	May 2020 Hyderabad, India
--	-----------------------------
