

Evan Cosgrave Hill

Senior DevOps Engineer

Florida, US citizen, 33701

+1 (901) 310-5063

evancosgravehill@gmail.com

Professional summary

Senior DevOps Engineer with extensive expertise spanning over a decade, specialising in DevOps, Infrastructure as Code, and Kubernetes. Evan excels in designing and implementing robust solutions, leveraging skills in AWS, CI/CD, and Terraform to meet complex customer needs. Known for a hands-on, data-driven approach, he integrates technical precision with innovative problem-solving, underpinned by an AWS Certified Solutions Architect credential and a Master of Engineering in Software Engineering.

Employment history

Booz Allen Hamilton | Senior DevOps Engineer | United States

Oct 2020 - Present

- Developed a reusable pattern for deploying internal developer portals as part of project engagements, with a hardened base image and reusable configuration.
- Deployed and configured Kubernetes environments with developer tooling such as Gitlab, ArgoCD, Grafana, and Keycloak to provide project teams with a platform to meet their needs.
- Built a documentation site to render intuitive, versioned, searchable documentation from a number of source repositories using Python scripts to mutate and prepare docs to render with a Docusaurus front end.

Jennis | Lead Developer | United States

May 2019 - Sep 2020

- Absorbed a large amount of domain knowledge under time pressure from the departing lead developer; liaised with the product manager and co-founders to plan the roadmap.
- Supported the integration with Terra to fetch data from various fitness wearables APIs and implemented features such as activity notifications to drive user engagement with the app.
- Paired with other engineers to investigate and resolve bugs in production.

Azrieli Group | AWS DevOps Engineer | United States

Feb 2017 - Apr 2019

- Built non-production development and staging environments using Terragrunt infrastructure as code.
- Wrote and deployed Selenium WebDriver browser automation test scripts for New Relic synthetic tests to test the health of application endpoints and basic consumer functionality, e.g., adding a product to the shopping cart, in all environments.
- Rebuilt new environments based on newly refactored pure Terraform code as part of a migration away from Terragrunt and prepared the migration from old environments to new.

Curve | Senior DevOps Engineer | United States

Jul 2013 - Jan 2017

- Defined the mission as equipping our engineers with superpowers by providing them with best-in-class tools in all development lifecycle stages and proactively tackling inefficiency. Guided the newly-assembled team toward this goal.
- Helped push Curve to new heights, migrate their core platform to EKS, and accelerate dev productivity. Pushing for immutable infrastructure, I rolled out a GitOps workflow using Terraform (Atlantis) and FluxCD.
- Supported LBG's aggressive recruitment strategy by delivering focused, high-quality technical training to new and existing employees, accelerating the journey toward having modern, high-performance DevOps teams.
- Designed a full-time intensive bootcamp course, including custom-made training material to teach JavaScript software development, DevOps, and automated testing best practices to this target audience.
- Delivered the course to several cohorts of students, producing 87 new DevOps engineers within one year. Each cohort was followed up with coaching and support through regular one-on-ones and working hands-on with teams.

Freelancer.com | Freelance Web Developer

Sep 2007 - Apr 2013

- Developed websites and mobile applications for clients across a broad spectrum of industries such as art and media, dentistry, rental properties, children's education, and charities.
- Managed the development of application concepts, including research, design, planning, and development. Contracted external roles such as photographer or copywriter where necessary to deliver exceptional results to clients.
- Achieved and sustained the first spot in Google search results for chosen phrases such as "freelance web developer Scotland" through active white-hat SEO.
- Set up and managed shared cPanel web hosting infrastructure, operated from Linux dedicated servers for over a decade with 99.9% availability.
- Enabled rapid growth for local businesses, with some clients achieving a 300% increase in revenue after launching an online presence due to organic search traffic.

Education

Master's degree, Computer Software Engineering | Florida State University

Jul 2002 - Apr 2008

Courses

AWS Certified Solutions Architect | AWS

Oct 2018 - Present

Scrum Master Certified (SMC) | Scrum Alliance

Jul 2020 - Present
