PROFESSIONAL SUMMARY

A highly skilled Software Developer with over 5+ years of experience in full-stack development, specializing in Java technologies, microservices, cloud computing, and UI/UX design. Expertise in developing and deploying scalable, secure, and high-performance applications with a focus on Spring Framework, Angular, React, and cloud-based solutions. I am an expert at designing and implementing microservices, optimizing application performance, and creating seamless user experiences. Strong experience working with agile methodologies in collaborative team environments to drive successful project deliveries.

- Experienced in all phases of Software Development Life Cycle (SDLC), including Planning, Analysis, Design, Implementation, Testing, and Maintenance of Web-Based, Client-Server, and N-tier Architectures
 - Expertise in Agile methodologies and working within Scrum teams for seamless project delivery.
 - I am proficient in developing and deploying enterprise applications using Java technologies such as Spring Boot, Spring Security, Hibernate, and RESTful Web Services.
 - Hands-on experience with Spring Framework modules like Spring Boot, Spring AOP, Spring Security, Spring Data, and Spring Microservices for scalable, distributed applications.
 - Strong background in front-end development using Angular, React, and JavaScript, along with building interactive UIs with HTML5, CSS3, Bootstrap, and jQuery
 - Experience with building microservices-based architecture using Spring Boot, deploying microservices on Docker, and integrating APIs for streamlined data flow.
 - I am skilled in building and maintaining cloud-based solutions using AWS services like EC2, S3, and DynamoDB for optimized performance and scalability.
 - Solid understanding of database technologies including RDBMS (Oracle, MySQL) and NoSQL (MongoDB, Cassandra) with extensive SQL and PL/SQL experience.
 - Proficient in version control systems like Git, Jenkins for CI/CD pipeline integration, and JIRA for task management in an Agile environment.
-

CORE COMPETENCIES

- **Java Technologies & Frameworks:** Java 8, Spring Boot, Spring Security, Spring Cloud, Spring Data, Hibernate, JPA, Spring Batch, Spring AOP, Spring Microservices, JDBC, JNDI, JMS, REST APIs, SOAP.
 - **Frontend Technologies:** Angular, React, HTML5, CSS3, Bootstrap, JavaScript, jQuery, Node.js.
 - **Cloud Technologies & Tools:** AWS (EC2, S3, CloudFront, DynamoDB, EBS, Glacier), Docker, Jenkins, GitLab CI/CD.
 - **Databases:** PostgreSQL, MySQL, Oracle 10g/11g/12c, DB2, MongoDB, Cassandra.
 - **Version Control & Collaboration Tools:** Git, SVN, CVS, JIRA, Confluence.
 - **Testing & Performance Optimization:** JUnit, Mockito, Selenium, Postman, Performance Tuning, Caching strategies, JPQL, Native Query, Criteria Query.
 - **Methodologies:** Agile, Scrum, Waterfall, V-Model.
 - **Software Development & SDLC:** Full SDLC, Continuous Integration/Continuous Deployment (CI/CD), DevOps practices.
-

EDUCATION

Union Commonwealth University

master's in information systems management GPA: 3.6

Jan 2023 - Aug 2024

PROFESSIONAL EXPERIENCE

Software Developer

Comerica Bank– USA

August 2023 – Present

- Designed and implemented a scalable micro frontend architecture using Angular and webpack module federation, enabling dynamic module loading and allowing for the independent development and deployment of individual modules, leading to increased scalability and maintainability.
- Developed a generic microservice for authentication and authorization utilizing Spring Security, Spring Security OAuth 2.0, Spring Data JPA, and PostgreSQL, ensuring secure and efficient user authentication across various microservices and improving overall security.
- Led the design and development of Restful services using Spring Boot, leveraging JPA and Hibernate to implement robust data persistence solutions, optimizing both data storage and retrieval, which improved application performance and scalability.
- Enhanced application performance by implementing techniques such as JPQL, Native Query, Criteria Query, and Specifications, ensuring efficient database query handling for large-scale applications and reducing latency.
- Implemented caching strategies using tools like Redis, significantly improving response times and reducing server load, enhancing the overall user experience and scalability.
- Integrated Spring Boot applications with PostgreSQL, optimizing query performance and leveraging the benefits of relational databases to handle high traffic efficiently.
- Collaborated with cross-functional teams to deliver high-quality code following Agile practices, ensuring alignment with business requirements and project timelines.
- Ensured the security of the application by implementing industry-standard security practices such as JWT-based token authentication and role-based access control.
- Participated in code reviews, troubleshooting, and debugging sessions, identifying and addressing bottlenecks in both performance and functionality to ensure smooth product releases.

Applications Engineer

Oracle India

July 2022 – Jan 2023

- Managed and maintained the Oracle Time and Labor (OTL) module, ensuring smooth operation for tracking and reporting employee time and labor data, and minimizing downtime during system maintenance and updates.
- Addressed production issues, including timecard errors, approval workflows, and integration failures, ensuring minimal disruptions to operations and providing timely solutions to enhance system reliability.
- Utilized Java and PL/SQL to ensure seamless data flow between OTL and other Oracle modules (HR, Payroll, Project Costing), improving data integrity and ensuring consistent communication across the enterprise system.
- Implemented secure SSL connections for APIs using Feign Client, ensuring encrypted data transmission and secure communications between internal services, adhering to best security practices.
- Collaborated with cross-functional teams to troubleshoot and resolve technical issues, ensuring that critical updates are applied to the OTL module with minimal impact to end-users.
- Led the integration efforts of OTL with other Oracle ERP systems, streamlining data exchange and optimizing reporting capabilities for HR and Payroll modules.
- Conducted system performance assessments and implemented optimization strategies, improving query execution times and enhancing the overall efficiency of the OTL module.
- Developed and maintained custom PL/SQL procedures and triggers to handle complex data manipulations, improving the efficiency of timecard processing and approval workflows.

- Assisted in the creation of user manuals and documentation for new features, ensuring that end-users had the necessary resources to navigate and utilize the OTL module effectively.

Software Engineer

Tata Consultancy Services, India

Aug 2019 – July 2022

- Developed scalable microservices using Spring Boot, Kafka, and JPA, delivering high-performance and reliable applications that could efficiently handle high loads and ensure robust service delivery.
- Designed and deployed secure REST APIs using Java 11, Spring Security, and JWT tokens, ensuring secure communication and authentication between microservices and users while adhering to best security practices.
- Integrated CI/CD pipelines with Jenkins, automating testing and deployment processes, which improved deployment efficiency, reduced manual errors, and minimized downtime during production releases.
- Enhanced the UI for internal applications using React and TypeScript, which led to a 30% increase in user engagement by improving usability, accessibility, and responsiveness of web interfaces.
- Automated manual testing processes using Selenium and Sauce Labs, ensuring consistent UI functionality testing and reducing time spent on repetitive manual tests, improving overall efficiency.
- Collaborated closely with cross-functional teams in an Agile environment, using JIRA for task management and ensuring the timely delivery of features, bug fixes, and application enhancements.
- Implemented logging and monitoring strategies using tools such as ELK Stack (Elasticsearch, Logstash, Kibana), ensuring better insights into system behavior and proactive issue resolution.
- Optimized system performance by tuning microservices, addressing database bottlenecks, and implementing caching strategies, which improved response times and scalability for high-traffic applications.

Participated in regular sprint planning, daily stand-ups, and retrospectives, continuously improving the development process and fostering a collaborative team environment.

PROJECTS

1. Oracle Time and Labor (OTL) Module

- Configured and supported the OTL module for timecard entry, approval workflows, and compliance with labor laws.
- Ensured integration of OTL with other Oracle modules, improving data consistency and operational efficiency.
- Utilized SQL for database management, implementing complex queries for reporting and auditing purposes.

2. OTC Authentication

- Designed a secure online transaction process by implementing OTP-based verification via SMS and email for an e-commerce platform.
- Secured APIs using Spring Security and JWT tokens to ensure user authentication and authorization during transactions.

3. Actimize Application Development

- Developed various controllers (Page Controller, Step Change Controller, Post Step Change Controller) in Java and Spring Boot to handle complex business logic for the Actimize platform.
- Ensured compliance with enterprise security standards by securing REST APIs with Spring Security and implementing OAuth 2.0 authentication.

4. Automation Testing Application

- Built a transaction monitoring application using React and Selenium for automated UI testing, significantly reducing manual testing efforts and improving software quality.
