

Harshavardhan Reddy

Senior Java Full Stack Developer | 913 346 4548 | harshavardhanch199@gmail.com

Summary of experience:

- Over 10+ years of experience as a Java Full Stack Developer with expertise in developing, analyzing, designing, implementing, and customizing software applications for scalable and robust web solutions.
- Strong proficiency in Core Java with expertise in OOP concepts including Collections, Multi-Threading, Exception Handling, Regular Expressions, Abstraction, Encapsulation, Inheritance, and Polymorphism.
- Experienced in full Software Development Life Cycle (SDLC) including Requirement Analysis, Development, Testing, Deployment, and Maintenance using Agile (Scrum) and Waterfall methodologies.
- Proficient in front-end technologies including React.js, Angular, TypeScript, JavaScript (ES6+), Redux, Context API, Bootstrap, HTML5, CSS3, SCSS, Tailwind CSS, and Material-UI.
- Hands-on experience with backend development using Node.js, Express.js, and Sequelize ORM for API integrations and database interactions.
- Expertise in developing RESTful APIs and Microservices using Java 17, Spring Boot, Spring MVC, Spring REST, Spring Security, Spring Cloud, and Hibernate.
- Proficient in cloud computing with AWS, including EC2, S3, RDS, Lambda, DynamoDB, CloudWatch, IAM, Elastic Beanstalk, API Gateway, SNS, and SQS.
- Hands-on experience in containerization using Docker and Kubernetes for application deployment and orchestration.
- Experienced in writing SQL queries, Stored Procedures, and Triggers for RDBMS like Oracle, MySQL, PostgreSQL, and MS SQL Server.
- Skilled in NoSQL databases including MongoDB and Cassandra for high-performance and scalable applications.
- Experience with CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI, and Bamboo for automated deployment and testing.
- Proficient in cloud-native development and serverless computing using AWS Lambda and Firebase Functions.
- Hands-on experience in performance monitoring, logging, and analytics using Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), and Grafana.
- Experienced in testing frameworks like JUnit, TestNG, Mockito, Cypress, Selenium WebDriver, and Jest for automation and unit testing.
- Expertise in version control systems including Git, GitHub, Bitbucket, and SVN for branching and merging strategies.
- Strong experience in DevOps practices and Infrastructure as Code (IaC) using Terraform and Ansible.
- Experience in API documentation using Swagger and Postman for testing and integration.
- Knowledge of GraphQL for efficient data fetching and API design.
- Skilled in WebSockets and event-driven architecture using Kafka and RabbitMQ.
- Hands-on experience in security best practices, including OAuth, JWT, SAML, and SSL/TLS encryption.
- Strong problem-solving skills with the ability to work in fast-paced environments while ensuring high-quality deliverables.

Technical Skills:

- **Programming Languages:** Java 17, TypeScript, SQL, PL/SQL, Python
- **Web Technologies:** HTML, DHTML, CSS, Javascript, Typescript, Angular, React.js, Redux, Bootstrap, AJAX, JQuery, JSF, JSP, Servlets, Node.js
- **Spring Frameworks:** Spring MVC, Spring Boot, Spring REST, Spring AOP, Spring Security, Spring Data, Spring Batch, Spring Transaction Management
- **Backend Technologies:** JavaBeans, JDBC, JNDI, Struts2, Play Framework, RESTful APIs, Hibernate, JPA, JDO
- **AWS Services:** EC2, S3, RDS, Lambda, Elastic Load Balancer, CloudFront, SQS, IAM, CloudWatch, EBS
- **Database Management:** Oracle, MySQL, MS SQL, DB2, Sequelize ORM
- **Application Servers:** Tomcat, WebSphere, Java Web Server
- **Testing Frameworks:** JUnit, TestNG, Selenium (IDE, RC, Web Driver), Jasmine, Karma
- **Version Control:** GIT, SVN

- **Development Tools:** Eclipse, STS, IntelliJ, NetBeans, RAD
- **Cloud & DevOps:** CI/CD pipeline setup, Jenkins, Bamboo, AWS Architecture, Docker, Kubernetes
- **Monitoring & Logging:** Splunk, ELK Stack (Kibana, Elasticsearch)

Project Experience:

Client: Master Card, O'Fallon, MO

Dec 2023 – till date

Role: Senior Java Full Stack Developer

Responsibilities:

- Configured and networked AWS Virtual Private Cloud (VPC), utilizing S3, Glacier, EBS for scalable storage and backup solutions.
- Led cloud migration from legacy data center to AWS, optimizing performance and cost efficiency.
- Implemented Spring Boot Microservices to handle high-volume messaging via Kafka cluster setup.
- Designed and implemented serverless architectures using AWS Lambda with Node.js, ensuring high availability.
- Developed Python scripts to automate CI/CD pipelines, data processing, and system operations.
- Integrated AWS services (EC2, RDS, ELB, Auto Scaling, IAM, Route53, CloudWatch, CloudFront, SNS, SQS) into enterprise applications.
- Developed RESTful APIs using Spring Boot, Hibernate, JPA, and Apache CXF for scalable web services.
- Built modern Single Page Applications (SPA) with Angular 17, TypeScript, RxJS, and lazy loading for improved performance.
- Designed and implemented microservices architecture using Spring Cloud, Kubernetes, Docker, and API Gateway.
- Automated testing using Selenium WebDriver, Cucumber, and TestNG, improving software quality.
- Developed CI/CD pipelines using GitLab, Jenkins, Docker, and Kubernetes, streamlining deployment processes.
- Managed AWS Oracle RDS, Aurora, and MongoDB for data-driven applications, optimizing database performance.
- Utilized multi-threading and Singleton design patterns to enhance Java application performance.
- Developed interactive UI/UX using React.js, Angular 17, Bootstrap 5, and Tailwind CSS.
- Implemented OAuth2, JWT, and AWS Cognito for secure authentication and authorization.
- Created data ingestion pipelines using Apache Kafka, Apache Storm, and Spark Streaming.
- Designed scalable API Gateway solutions with Kong and AWS API Gateway.
- Used Amazon CloudWatch and CloudTrail for real-time monitoring and logging of AWS services.
- Migrated legacy monolithic applications to microservices-based architecture, improving scalability.

Environment: Java, Spring Boot, Microservices, Kubernetes, Docker, AWS (EC2, RDS, S3, Lambda, Route53, IAM, CloudFormation), Apache Kafka, API Gateway (Kong, AWS API Gateway), Python, Angular 17, React.js, Selenium, Cucumber, GitLab, Jenkins, CI/CD, Agile, MongoDB, Aurora, SQL Server, MySQL.

Client: Macy's, New York, NY

Jun 2021 – Nov 2023

Role: Java Full Stack Developer

Responsibilities:

- Involved in various SDLC phases like Requirement gathering, Design, Analysis and Code development and the project was developed using Agile based SCRUM Methodology.
- Tested the response format of REST services in XML, and JSON. Used various drivers specific to each browser to write scripts for testing across various browsers.
- Implemented a production ready, load balanced, highly available, fault tolerant Kubernetes infrastructure
- Working with data in various formats (JSON, CSV, XML) using Python.
- Developed automation test cases using Java and selenium on Eclipse for web 2.0 Ajax application.
- Experience using testing strategies such as TDD, including knowledge of JUnit and/or Selenium.
- Developed REST web services to expose the Middleware services. Applied agile methodology for design/development, prepared project plan and test plans.
- Used ReactJS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Building stable React components and stand-alone functions to be added to any future pages.
- Developed the Drag and Drop functionality using React-Dragabble
- Created read replicas of AWS-RDS-NoSql Mongo DB in various regions and AZs using backups and snapshots and scale out AWS-RDS-NoSQL Mongo instance to additional AZs and regions based on requirements using DB snapshots

- Designed and developed the gateway framework with caching features. Applied design patterns such as delegator, singleton and other J2EE patterns.
- Utilize AWS CLI to automate backups of ephemeral data-stores to S3buckets, EBS and create nightly AMIs for mission critical production servers as backups.
- Used React-Autocomplete for creating google maps location search on the webpage.
- Worked on Jenkins and Docker for CI / CD of the microservices developed and managing them.
- Work on React JS Virtual Dom and React views, rendering using components which contains additional components called custom HTML tags.
- Composed and executed Mongo DB scripts to insert and update NoSQL database, automating data changes and reporting
- Built REST APIs using Python-based frameworks (e.g., Flask, Django).
- Developed and coded for Logging, Exception. Implemented persistence to database using the hibernate ORM. Using Jenkins for continuous integration for testing and deploying code into production.
- Launching Amazon EC2 Cloud Instances using Amazon Images (Linux/Ubuntu) and configuring launched instances with respect to specific applications.
- Implement various screens for the frontend using React.js and used various predefined components from NPM (Node Package Manager) and redux library.
- Developed Micro services using RESTful services to provide all the CRUD capabilities.
- Worked with OpenShift platform in managing Docker containers and Kubernetes Clusters.
- Used Message-driven batch application using Spring Batch to handle multiple requests accessed through Message Queue services between several Micro services in the application.
- Developed several Micro services as part of the project using Spring Boot.
- Used Microservices architecture, with Spring Boot-based services interacting through a combination of REST and Apache Kafka, Spring4 message broker
- Worked with Kafka Cluster using Zookeeper. Developed Applications using Rule Engines-JBoss Drools, Work flows, Human tasks to implement Business rules validations.
- Review team work products/deliverable(s) for quality. Using JIRA for project Management and previously used Tiaga.io.
- Used Maven for build and deployment, Jenkins for continuous integration and log4j for logging.
- Developed test cases using TDD (Test Driven Development) approach.
- Involved in writing the test scenarios, developed feature files using Cucumber annotations.
- Developed data transformer for converting legacy data from Source tables to avro format and fed into Kafka using Camel.
- Experience using testing strategies such as TDD, including knowledge of JUnit and/or Selenium. Used Selenium for all Hibernate beans and relevant java classes.
- Created S3 buckets and managing policies for S3 buckets and Utilized S3 bucket and Glacier for storage and backup on AWS. Design and use of REST full web services.
- Writing Test Data and Test cases for the new features. Enhanced test plan with new test cases at regular intervals of time. Opening JIRA tasks for agile scrum based development.
- Responsible for design and maintenance of the GIT repositories, views, and the access control strategies.
- Used Mockito and JUnit for unit testing of the application.
- Used EJB 3.0 to create service which is responsible for transferring metadata and data to each other.
- Created REST-Controllers with respect to RESTful standards in Spring MVC to connect model with view.
- Provide a technical solution to the team if there is any technical issue and Coordinating for Performance test. Participated in Scrum related activities and Daily Scrum Meetings.

Environment: Java, Spring, HTML, JDBC, Java Script, React JS, Micro Services, Eclipse, JSON, JQuery, Rest Web services, Hibernate, EJB, JSP, JPA, Python, Tomcat Server, SQL server, AWS, TOAD, Java Junit, Jenkins, Xpath, TestNG, QC, GIT, Putty, Apache Kafka, Windows, Oracle, PL/SQL Developer, Kubernetes, Docker, Jenkins, UNIX, PCF, Windows, XML.

Client: State of New Jersey (DOE), Trenton, NJ

Sep 2019 – May 2021

Role: Java/J2EE Developer

Responsibilities:

- Involved in SDLC Requirements gathering, Analysis, Design, and Development, testing production of the application using both Waterfall model Kanban.
- Used Struts framework to follow MVC Architecture in the application server

- Managed connectivity using JDBC for querying/inserting & data management including triggers and stored procedures.
- Implemented Business processes such as user authentication, using Session EJB
- Intercepting filter design pattern used for all the pre-processing and post-processing purposes which include session validation, authorization, logging.
- Designed and developed presentation layers using JSP, Java Beans, CSS, HTML, DHTML, jQuery and JavaScript, React JS, Json in UI pages.
- Involved in design discussions and understanding of business requirements and identify the relevant functional and technical requirements.
- Worked with Spring Core, Spring MVC Framework for Dependency Injection (DI), and Spring Context to provide message sources.
- Install and configure Amazon command line interface tools Performed migrations of virtual servers from Ubuntu Open VZ physical servers' to AWSEC2.
- Designed roles and groups for users & resources using AWS Identity Access Management (IAM) and managed network security using Security Groups, and IAM.
- Works in using React JS components, Forms, Events, Keys, Router, Animations, and Flux concept.
- Implements stable React components and stand-alone functions to be added to any future pages.
- Used React JS for templating for faster compilation and developing reusable components.
- Writing JavaScript functions for various validation purposes. Writing Java Beans to contain data objects. Implemented session beans, entity beans, and message-driven beans.
- Dynamic form generation auto-completion of forms and user-validation functionalities using AJAX.
- Used SOAP JAXB for producing web services and involved in writing programs to consume web services
- Developed the application using Spring MVCFramework that helps in separating the business logic, presentation logic and navigation logic
- Written Spring Core and Spring MVC files to associate DAO with Business Layer
- Involved in AWS EC2, Amazon S3, Amazon Elastic Load balancing and other parts of AWS infrastructure.
- Setting up daily Status meetings with the team and communicate status to Project Manager.
- Worked with the Business team during UAT to review the requirements for any new functionality or enhancement
- Utilized React for its efficient data flow architecture to create a lightweight and render efficient web app that searched projects via the GitHub API through keywords.
- Extensively used mainframe platform to access the tables in DB2 Database and to refresh the data.
- Involved in the complete life cycle of the project from the requirements to the production and involved in UAT.
- Worked with server admin and deployed the application on to the production and Stage Servers.
- Worked on the jQuery JavaScript Library that simplifies HTML document traversing, and event handling.
- Deployed the applications on IBMWebSphere6.0 Application Server
- Used IBM RAD versions 8.0 8.5 as IDE for the enterprise application Project development

Environment: Java, Java Beans, J2EE, SOAP, Spring, AWS, CXF, Javascript, React JS, Ajax, jQuery, JSP, XSD, XML Bean, WebSphere, DB2, JUnit, Log4J, FileZilla, Spring Framework security using LDAP, TFS, SharePoint, RAD 8.0 8.5, DB2, Mainframe Platform.

Client: Bayer healthcare pharmaceuticals Inc., Whippany, NJ

Nov 2017 – Aug 2019

Role: Java Developer

Responsibilities:

- Developed persistence API's that can store data synchronously and asynchronously to Cassandra data store with batching.
- Implemented the application using Spring IOC, Spring MVC Framework, Spring AOP, Spring Boot, Spring Batch, and handled the security using Spring Security.
- Designed and developed the End Points (Controllers), Business Layer, DAO Layer using Hibernate/JDBC template and Spring IOC (Dependency Injection).
- Designed and developed the UI using Struts view component, JSP, HTML, CSS, JavaScript, Angular JS.
- Consumed SOAP and Restful web services in SOA environment and used SOAP UI for testing.
- Used Web services (SOAP) for transmission of large blocks of XML data over HTTP
- Involved in creating various Data Access Objects (DAO) for addition, modification and deletion of records using various specification files.
- Worked with core java concepts such as Oops, Multi-threading, collection framework and Exception handling
- Utilized Hibernate for Object/Relational Mapping purposes for transparent persistence onto the SQL SERVER

- Used JIRA to assign, track, report and audit the issues in the application.
- Implemented Design Patterns like Front Controller, Business Delegate, Service Locator, Session Facade, Data Access Objects, Singleton.
- Spring MVC model integration for front-end request action controller.
- Used Apache Axis Service Engine for creating and deploying Web Service clients using SOAP.
- Designed and developed application based on MVC design pattern using struts Framework
- Used SVN for version controlling and JUnit for unit testing
- Created flows on messaging using ActiveMQ.
- Extensively used JUnit for unit testing, integration testing and production testing.
- Involved in installing and configuring Maven for application builds and deployment.

Environment: Java, J2EE, JSP, HTML, CSS, Javascript, Angular JS, Spring, MVC, SOAP, SQL Server, Struts, SVN, Junit, Active MQ, Maven, IBM Web Sphere Application Server.

Client: Novaya, Hyderabad, India

Oct 2014 – July 2017

Role: Core Java Developer

Responsibilities:

- Performed the analysis, design, and implementation of software applications using Java, J2EE.
- Involved in coding, maintaining, and administering Servlets, and JSP components to be deployed on a Web Sphere Application server.
- Worked with core java concepts such as OOPS, Multi-threading, collection framework and Exception handling.
- Used various Core Java concepts such as Multi-Threading, Exception Handling, Collection APIs to implement various features and enhancements.
- Used Apache Ant to compile java classes and package into jar archive. Wrote PL/SQL queries, stored procedures, and triggers to perform back-end database operations.
- Developed Action Forms and Controllers in Struts framework.
- Developed and implemented spring and J2EE based MVC (Model-View-Controller) framework for the application.
- Designed, developed, and maintained the data layer using Hibernate.
- JUnit was used to do the Unit testing for the application.
- Involved in tracking and resolving defects, which arise in QA & production.

Environment: Core Java, J2EE, JSTL, JSP, Hibernate, Servlets, PL/SQL, Apache Ant, JUnit
