

HENRY ASHU

AWS Solutions Architect | DevOps & Cloud Security

Location: McKinney, TX | **Contact:** 903 224 5624 | **Email:** henryashu66@gmail.com | [LinkedIn](#)

SUMMARY

AWS Certified Solutions Architect with around 7 years of hands-on experience in designing, deploying, and optimizing scalable, cost-effective cloud infrastructures. Expertise in AWS cloud architecture, DevOps automation, and cloud security practices, with a focus on ensuring high availability, disaster recovery, and compliance across hybrid cloud environments. Adept at leading large-scale cloud migrations, optimizing cloud spend, and reducing operational overhead through Infrastructure as Code (IaC) and automation. Proven track record of driving performance improvements, enhancing security postures, and reducing downtime by leveraging AWS services such as EC2, Lambda, RDS, and CloudFormation. Experienced in mentoring teams, establishing governance frameworks, and implementing security measures aligned with industry standards such as SOC 2, HIPAA, and GDPR. Known for optimizing cloud resources and delivering solutions that drive business growth while maintaining a high level of compliance and security.

SKILLS

Cloud & Security Architecture: AWS (EC2, VPC, S3, Lambda, RDS, CloudFront, Route 53, Auto Scaling, IAM, Control Tower, CloudFormation, Redshift, WAF, AWS Organizations)

Cloud Security & Compliance: AWS Security Hub, GuardDuty, Shield, AWS KMS, Secrets Manager, AWS Config, AWS Audit Manager, AWS Macie, IAM Policies & Roles, MFA, Zero Trust Architecture, PCI DSS, HIPAA, SOC 2, GDPR, NIST, CIS Benchmarks

Security Operations & Threat Management: SIEM Solutions (Splunk, AWS Security Lake, Datadog), Incident Response, Forensics, Vulnerability Management (AWS Inspector, Tenable Nessus), Encryption (AES-256, KMS, ACM), Identity & Access Management (IAM, RBAC, SSO, Federation), AWS CloudTrail & Config for security auditing

DevSecOps & Automation: Terraform, AWS CloudFormation, Ansible, Jenkins, AWS CodePipeline, GitLab CI, Azure DevOps, Docker, Kubernetes (EKS, AKS), Infrastructure as Code (IaC) Security, Policy-as-Code (Open Policy Agent, AWS SCPs)

Networking & Monitoring: VPC Peering, Transit Gateway, Elastic Load Balancers, Route 53 Security, VPN, AWS Firewall Manager, CloudWatch, Prometheus, Grafana, AWS SNS & SQS for security alerting

Programming & Security Automation: Python, PowerShell, AWS CLI, JSON, YAML, Shell Scripting, Lambda Functions for Automated Security Controls

Cost & Performance Optimization with Security Focus: EC2 Auto-Scaling, S3 Lifecycle Policies, Redshift Query Optimization, Cloud Cost Governance, AWS Budgets & Cost Explorer, Security Cost Optimization

EDUCATION

Bachelor of Science in Computer Science
University of Buea, Cameroon

| 2012

CERTIFICATION

- AWS Certified Solutions Architect - Professional
- CompTIA Security+
- Oracle Certified Associate (OCA)

EXPERIENCE

Sr. AWS Solution Architect
McKinsey & Company

| Feb 2023 – Present

- Reduced provisioning time by 30% through modular Terraform scripts for deploying virtual machines in AWS GovCloud.
- Increased infrastructure scalability and resilience by architecting CloudFormation stacks for VPC provisioning across multiple availability zones.
- Strengthened access control by configuring AWS IAM and integrating with On-Prem AD and third-party IdPs

- (Azure AD, Okta, OneLogin), reducing unauthorized access incidents.
- Enhanced cloud governance by deploying AWS Control Tower with custom guardrails, ensuring compliance across 50+ accounts.
- Reduced vulnerability exposure by implementing AWS WAF and security controls, improving web application security.
- Cut storage costs by 15% using S3 Versioning, intelligent tiering, and lifecycle policies for backup and archiving.
- Engineered disaster recovery and failover strategies, reducing system downtime by 40% and ensuring uninterrupted service delivery.
- Improved uptime by 20% with Auto-Scaling, Elastic Load Balancers, and SQS, ensuring high availability of critical applications.
- Boosted Redshift query performance by 20% through optimization.
- Accelerated cloud migration by 35% using the 6Rs strategy for seamless application and database migration to AWS.
- Reduced deployment times by 70% by automating processes with Jenkins, Ansible, and Terraform.
- Increased microservices flexibility by designing a scalable AWS architecture with Kubernetes, optimizing performance.
- Enhanced system health monitoring with Prometheus, Grafana, and Elasticsearch, reducing issue detection and resolution times.
- Improved regulatory compliance with PCI, HIPAA, and SOC 2 security controls, achieving higher audit scores.

AWS Solution Architect DXC Technology

| Mar 2021 – Jan 2023

- Increased operational efficiency by optimizing cloud-based Property Management Systems (PMS), aligning architecture with best practices.
- Led teams in implementing monitoring and alerting systems, reducing downtime and improving visibility through tools like Splunk and Datadog.
- Automated infrastructure deployments and improved CI/CD pipeline efficiency using AWS CloudFormation and EKS, optimizing container monitoring and performance.
- Led incident management and developed response plans to protect critical AWS resources (EC2, RDS) and maintain system stability.
- Provided strategic cloud solutions guidance, driving innovation through Proof of Concept (POC) initiatives.
- Mentored Pre-Sales Solutions Architects, fostering collaboration and aligning teams on new architecture frameworks.
- Reviewed code and deployment scripts to ensure quality standards, enhancing release stability and minimizing bugs.
- Collaborated with database and product teams to identify and resolve performance bottlenecks, driving continuous system improvements.
- Managed AWS security tools, ensuring compliance and resilient infrastructure.
- Defined and implemented Git strategies for version control, streamlining application development workflows.
- Delivered pre-sales technical expertise, designing configuration diagrams and supporting global sales teams in client engagements.

Cloud Security Engineer Humana

| Mar 2018 – Feb 2021

- Designed and implemented robust security frameworks for AWS environments, ensuring compliance with industry standards such as NIST, HIPAA, and SOC 2.
- Managed AWS security services, including IAM, AWS Organizations, GuardDuty, Security Hub, and AWS WAF, to enhance identity management, threat detection, and compliance monitoring.
- Conducted security assessments and vulnerability management using AWS Inspector and Tenable Nessus, proactively identifying and mitigating risks.
- Implemented secure networking solutions, configuring security groups, network ACLs, and private VPC architectures to safeguard cloud infrastructure.
- Automated security best practices using Terraform and AWS Config rules, ensuring consistent policy enforcement across cloud environments.
- Led the migration of on-premise workloads to AWS with a security-first approach, implementing encryption at rest and in transit using AWS KMS and ACM.
- Integrated AWS CloudTrail and AWS Config for real-time monitoring and audit logging, improving security posture and incident response capabilities.
- Managed secrets and sensitive configurations securely using AWS Secrets Manager and HashiCorp Vault, reducing exposure to credential leaks.
- Designed and enforced security controls in Kubernetes clusters (EKS & AKS), leveraging Pod Security Policies, Role-Based Access Control (RBAC), and network policies to restrict unauthorized access.
- Developed automated compliance checks using AWS Lambda and Python scripts, ensuring continuous adherence to security standards.
