

KARTHIK KOGANTI

Sr. CyberArk Defender Technical Consultant

Ph: 609-662-6190 | Email: karthikkoganti326@gmail.com

LinkedIn: [Karthik-C](#)

PROFESSIONAL SUMMARY

- An accomplished CyberArk certified **Sr. CyberArk Defender Technical Consultant** with SOLID **12+ years** of experience in using IAM/PAM tools for deployment, configuration, integration, upgrades and troubleshooting of CyberArk PAS suite - with a strong emphasis on Enterprise Password Vault, Password Vault Web Access, Central Policy Manager, Privileged Session Manager & Proxy, Application Access Manager, Privileged Threat Analytics, assisting clients with post go-live and/or post implementation support across various business domains.
- Demonstrated 10+ years of experience in the implementation, installation and upgrading of CyberArk 7.0, 9.9.5, v10 (10.4, 10.5 & 10.8), v11 (11.1, 11.4 & 11.5).
- Strong subject matter expertise in Implementation & Administration of CyberArk PIM components such as Vault, PVWA, CPM, PSM, PSMP and HA CLUSTER.
- Hands on experience in maintaining CyberArk infrastructure with the latest security, new features and healthy.
- Proven ability performing Manage, Resume, Release of Privileged Credentials using Cyber Ark Privilege Management Vault Administration.
- Involved in full life cycle integrations and troubleshooting platforms with CyberArk Privileged Account Security, in all environments such as Solaris, Red Hat (Linux)/UNIX, Windows servers, VMware ESXi, Network Devices, Middleware, Databases and Applications.
- Experienced in the configuration including AD integration, management of CyberArk Enterprise Password Vault and managed safes and server/ host addresses in Enterprise Password Vault.
- Provided guidance in addition, removal, change and lifecycle of Privileged ID Management (PIM) in order to provide the highest quality levels of security.
- Adept in installation and capacity management of CyberArk components - Privileged Session Manager (PSM) including RDS Session host and licensing.
- Experienced with ITSM & PAM Operational Tasks - defining access control, user entitlements, manage applications, credentials and user access policy management.
- Troubleshooting and maintenance of the Password Vault, CPM, PSM, AIM, DR Vault, migrating user accounts using Password upload utility.
- Advanced understanding of manual Accounts On boarding and Bulk Accounts Onboarding using PACLI.
- Experience on Privileged user account administration of Various target devices like Windows, e-directory, Janus, Unix, Database (Oracle, SQL, Sybase), Mainframe, Midrange, Tandem.
- Strategic understanding and experience in Safe Level Authorizations and Vault Level authorizations. Knowledge on Automation Errors related to CPM.
- Proficient in network security using ASA Firewall, Checkpoint, Juniper SRX, Palo Alto, Cisco IDS/IPS and IPSEC/SSL VPN and different LAN & WAN technologies.
- Knowledge of frame relay, sub-netting and DNS, WINS, LDAP, DHCP, http, HTML, HTTPS, TCP/IP, UDP, SNMP, OSPF, RIP, IPSEC, PTP, VLAN, STP (Spanning tree Protocol), RTSP & Multicasting protocols.
- Able to work well independently and also in a team by helping to troubleshoot technology and business-related problem.

EDUCATION

- **Bachelor of Technology – Computer Science**, Jawaharlal Nehru Technological University – 2006 to 2010

TECHNICAL SKILLS

Technology Stack	CyberArk Privileged Identity Management v10, White Hat Web Security, i-Defense, NTT Security, LogRhythm, McAfee Nitro (SIEM), McAfee ePO, McAfee Endpoint Protection Suite
Qualys Continuous Monitoring	Vulnerability Management, Web Application Scanning, Threat Protection, Policy Compliance, Cloud Agents, Asset Management, Governance
Cyber security solution	FireEye CMS, NX, EX, HX, IA, PX
Programming Languages	SQL, PL/SQL, HTML, XML, Perl, Shell Scripting, Python
Frameworks	NIST SP 800-171, ISO 27001/31000, HIPPA, HITRUST CSF, PCI DSS
Other Tools & Utilities	Metasploit, NMAP, Wireshark, Kali, RSA Archer, Blue Coat Proxy, ArcSight, Splunk, IBM Q-Radar, McAfee Vulnerability management solutions, Nessus, SolarWinds, LogRhythm, CyberArk, Nmap, Tripwire, Symantec Endpoint Security, Networking Tools
Methodologies	ASAP (SAP), Agile/Scrum
Project Utilities	MS Project, Access, Visio, Notes, Office XP
Operating Systems	Windows-2008, Windows-2012, UNIX, Linux, Ubuntu, AWS

PROFESSIONAL EXPERIENCE

JP Morgan Chase - Cleveland, Ohio

Mar 2021 to Till Date

Role: Sr. CyberArk Technical Engineer (PAM)

Project Description: - I was involved as Sr. CyberArk (PAM) Engineer to help administer the JPMC shared environments alongside other team members.

Responsibilities:

- Actively worked on implementation & administration of CyberArk PIM components such as Vault, PVWA, CPM, PSM, PSMP and HA CLUSTER.
- Responsible for managing the CPM Failure Projects like Troubleshooting the failures by working with platform team and getting the issue fixed permanently.
- Performed Health check-up of Vault Accounts failures through Splunk dashboard to identify Top talkers besides taking action to mitigate the issue.
- Helped with installs while integrating with the existing CyberArk implementations and managed high privileged accounts to automate Privileges Access Management process.
- Successfully identified the Accounts which are manually managed and proactively reached out to respective teams to validate the feasibility of automating the same.
- Performed PAM Operational tasks in PVWA - Creating Safes, Defining Access Control, Policies/Platforms, User provisioning and entitlements, Managing Applications Credentials, Auto-upload and User Access Policy Management.

- Responsible for PAM Operational tasks defining access control, user entitlements, user access policy management, application credentials and session management related to Privileged Access Management.
- Worked on Active Directory involving users, computers, groups, policies. Installation & configuration of components of CyberArk vault and its components PVWA, PSM, AIM, DR Vault, CPM, PTA, Secure Replication, back up, and Password Upload Utility.
- Collaborated with other team members to document security and systems standards, access management, authorization/ permissions management, network protocols, system management applications, and system & network security. Worked with account management on various platforms such as Windows, Unix, Active Directory, LDAP, SNMP monitoring, databases and storage systems.
- Enhanced CA PAM by working closely with the Product team to configure and add an on-premise VM instance to our existing multisite cluster in AWS. Resulted in a showcase for the sales and product teams for new customers.
- Responsible for designing API structure for ongoing projects and producing a swagger.io layout which allowed for API calls to be used for any product requiring it
- Owned support bucket handling ServiceNow P1, P2, P3 tickets to troubleshoot issues related to SSO, authentication and authorization.
- Responsible for the replication, chaining, load balancing and other administration task. Involved with AD related Services including DNS, Group Management, Group Policy Management, Domain Trusts and Kerberos.
- Involved in the areas of server log analysis and understanding of common analysis techniques and tools on Unix and Windows servers.
- Responsible of on-boarding Applications accounts as part of AIM activity with experience in performing Privileged Access Reviews, Compliance Reporting, Access Control Processes and other associated tasks with Privileged User Management.
- Performed automated provisioning of Safes and Accounts using Password Upload Utility and PACLI.
- Proactively troubleshooted CPM failure accounts and perform manual CHANGE Task.
- Designed AIM solutions to manage Windows and Linux application account passwords. Worked with Network Engineer's in the installation and configuration of firewalls.
- Provided 24/7 On call remote support for CyberArk Operations and Maintenance by collaborating closely with stakeholders to determine release dates, gather requirements, and maintain SLA agreements.

SOLUGENIX - Hyderabad, India

Jan 2020 to Dec 2020

Role: Sr. CyberArk/PAM Lead Engineer

Project Description: I worked as a Sr. Systems Analyst (CyberArk/PAM) for SOLUGENIX - a technology company that delivers Intelligent Business Services with process optimization to streamline operations.

Responsibilities:

- Involved in requirements gathering and served as a primary technical point of contact for clients CyberArk's Infrastructure & Operations collaborating with stakeholders as required.

KARTHIK KOGANTI

- Worked in CyberArk PAS suite which includes EPV, PVWA, CPM, PSM, PSM for SSH, AAM (CCP, CP), PUU, PACLI, Rest APIs.
- Performed Automation and handled PAM Operational issues, Outage calls, Emergency and DR drills.
- Defined CPM and PSM servers to different platforms (UNIX, windows, e-directory, applications) besides troubleshooting PSM, CPM and PVWA servers
- Created password policies in CPM for various platform accounts and testing it in lower environment before moving to production by collaborating closely with stakeholders to determine release dates, gather requirements, and prioritizations.
- Integrated PAM MFA using RADIUS, SAML (SSO) using Azure, Syslog's over TCP/UDP/TLS and ENE for notifications.
- Managed CyberArk Security that offers wide range of services and support including implementation, consulting, training, maintenance, online support and vault.
- Assisted in and perform the day-day activities related to CyberArk including the development, testing, and roll-out phase activities of the implementation.
- Worked with CyberArk as a vendor of choice to implement and deploy Privileged Access Management (PAM) Solution.
- Upgraded CyberArk software version on the Production and DR vaults and pertaining CPM/PSM and PVWA.
- Implemented application account management by CyberArk on Windows, Data bases, Linux servers and Applications using AIM module.
- Experience working with Cross functional teams (Windows, Linux, Database, Networking, Security, Application, Firewall) to troubleshoot and find the RCA.
- Involved in troubleshooting and maintenance of the Core PAS Suite - EPV, PVWA, CPM, PSM, PSM for SSH, AAM (CCP, CP), PUU, PACLI, Rest APIs.
- Implemented Active Directory mapping connection to provision users and groups into Cyber-Ark vault and e-mail notification failures.
- Experience with IAM (SailPoint), SSO, MFA, SIEM, New Relic, SiteScope. Good Experience in working with Ticketing system (Service Now) and Log management Tool (Splunk, ArcSight, JSA).
- Good exposure and experience with Cloud (AWS) technology and its services as we provided 24/7 On call remote support for Operations and Maintenance.

JPMC (Magna Infotech)- Hyderabad, India

Aug 2016 to Dec 2019

Role: Sr. CyberArk Operations Consultant

Project Description: As a Senior CyberArk Operations Consultant at Magna Infotech, I was outsourced to JP Morgan Chase, an esteemed largest client of Magna Infotech to help deploy, administer and manage CyberArk implementation.

Responsibilities:

KARTHIK KOGANTI

Sr. CyberArk Defender Technical Consultant

Ph: 609-662-6190 | Email: karthikkoganti326@gmail.com

LinkedIn: [Karthik-C](#)

- Worked in full life cycle implementation. Conducted group workshops & one-on-one requirement gathering sessions with super users and management.
- Developed statements of work, design systems, and services, and develop estimates for solutions
- Implemented and helped build a mature configuration management process by actively managing processes, procedures, technical designs, and system documentation.
- Experience in a multi-site mission-critical or enterprise production environment.
- Configured VLAN, spanning tree, VSTP, and SNMP on Juniper EX series switches, and checkpoint firewall layers securing existing Data Center infrastructure.
- Supported with designing PAM Solutions in the existing environment working alongside PAM project Implementation team
- Responsible for developing information security risk identification, classification, triaging, and mitigation
- Implemented and maintained CA PAM solution protecting 4000+ GIS-managed servers, devices, and applications.
- Worked on creating Identity access for the employees and managing the certifications and provisioning accordingly with the SailPoint Identity IQ.
- Proactively helped in administering and implementing SIEM, DLP, Web sense, Advance malware detection program, vulnerability assessment, and prevention,
- Provided technical input on Identity solutions with SAP systems looking to consume IAM services besides providing SAP Basis and Security teams with better awareness and information on how IAM services will support their efforts.
- Had to deal with SIEM solutions such as Rapid7 Nexpose, Forcepoint, Splunk
- Identified Security Target and Target of Evaluation using CyberArk Privileged Account Security Solution v9.1
- Scripted mass policy, target application, and ID creation in CA PAM, reducing initial rollout time. Also held virtual workshops and training sessions which ensured CA PAM user productivity and acceptance globally.
- Worked closely with the CA PAM product support team providing feedback on defects and improving user experience.
- Managed CyberArk PAS to enable the company to secure, provision, and monitor all the activities associated with enterprise systems and applications
- Conducts briefings with Fortune 500 C-Suite executives for unstructured data security, identity access management, privileged access management, and advisory services.
- Installation and configuration of CyberArk Vault, Password Vault Web Access (PVWA), Central Password Manager (CPM), and Privileged Session Manager (PSM) in Prod.
- Troubleshooting and maintenance of the Password Vault, Central Password Manager (CPM), Privileged Session Manager (PSM), Application Identity Manager (AIM), and DR Vault in DR Server.
- Integrated with Active Directory (LDAP), 2 Factor Authentication (RADIUS), Exchange (SMTP) & Splunk (SIEM), and Private Ark command line interface (PACLI).
- Have good Experience with PAM suite components installation and implementation.
- Delivered identified privileged accounts into the CyberArk management solution
- Included onboarding of privileged User IDs into CyberArk from UNIX, Linux, and Windows systems.
- Assisted in and perform the day-day activities related to CyberArk including the development, testing, and roll-out phase activities of the implementation.

- Implementation and installation of Cyber-Ark 7.0 and the latest implementation of Cyber-Ark 8.1.0. and CyberArk 9.2.1
- Implementation of SailPoint IIQ, Role Based Access Control (RBAC), Governance, and Access Certification in SailPoint.
- Duties involve participation in managing technologies, evaluating new technologies, continuous improvement of SLA, customer meetings, and implementing new solutions as asked by the customer.
- Performing Vulnerability Assessments and taking the required counteractions and measurements to ensure the security of the IT infrastructure/systems.
- Performed PAM Operational Tasks Defining Access Control, User Entitlements, Manage Applications Credentials, and User Access Policy Management.
- Responsible for Privileged Access Management of CyberArk, including working with components such as vaults, CPMs, accounts, policies, safes, usages, PACLI, and providers.
- Analysis and documentation of network & information security requirements and define security policy for enterprise client and business-critical servers.
- Participated in OWC sessions with Development team to get resolved the critical issues during the Upgrade and day-to-day issue on priority basis.

MICROLAND – Bangalore, India

Feb 2015 to Aug 2016

Role: IT Service Engineer (Cyber Security)

Project Description: MICROLAND, a leading Systems Integration Company with a strong focus delivering Network Services, Cyber Security has hired me as a IT Service Engineer to help deploy Cyber security technologies for its end clients.

Responsibilities:

- Actively involved in SCRUM meetings discussing the implementation, integration of backlog modules considering the released version of software and best practices for solutions.
- Primary responsibilities include Installation and configuration of CyberArk Vault, Client, Active CPM, Network load balanced CyberArk PVWA, Clustered CyberArk PSM, and PSM SSH proxy and design and creating a new application on board is documented and implemented.
- Configuration of multiple Privilege accounts across the organization and Administration of CyberArk, Integration of window accounts, UNIX accounts, Database, Network and Security Devices and migrating user accounts into Password Vault using Bulk upload utility.
- Monitor CyberArk reports and respond to failed password verification alerts and work with system account owners to resolve failure alerts.
- Manages the strategy and roadmap implementation for Identity and Access Management Platform Tools: Sail point Identity, CA privileged access manager.
- Experienced in day-to-day operational support in adding and deleting accounts, applying policies, assigning safes, synchronizing failed accounts and Password rotations.
- Implementation and creation of web policies, password policies, Vault Back-up Management process, AD Configuration (User to connect AD) & Branches).
- Implementation and installation of different versions of CyberArk Suite 8.1.0 and 9.3.
- Used CyberArk Privileged Account Security product suite which includes Enterprise Password Vault, Password Vault Web Access, Central Policy Manager, and Privileged Session Manager.

- Upgraded CyberArk software version on the Production and DR vaults and pertaining CPM/PSM and PVWA.
- Troubleshooting and maintenance of the Password Vault, CPM, PSM, AIM, DR Vault.
- Migrated user accounts into Password Vault using Bulk upload utility.
- Involved in Privileged Identity Management, Identity & Access Management, Single Sign On, SAML, OAuth, AD LDS, ADFS, OKTA, TLS/SSL, and Active Directory.
- Assisted in Production Support issues proactively by adhering to Service Level Agreements (SLA's).

IN-Know Tech Private Limited – Bangalore, India
Role: Network/IAM Engineer

Jan 2013 to Feb 2015

Project Description: In-Know Tech has over a decade of experience in delivering IT Infrastructure solutions and IT Operations Management services to global enterprises I was hired as an IAM Engineer to help with Production Support and do due diligence – troubleshooting, perform root-cause analysis to address bugs to help support their clients.

Responsibilities:

- Created documentation while gathering business requirements alongside defining risk-mitigating controls and legal compliance requirements
- Assisted in policies and procedures (including staff support for security related to identity and access incidents and awareness)
- Configured SailPoint IIQ as part of the application onboarding and implementation process
- Learned and supported deployment of new IAM security products as needed
- Helped with automation and system integration efforts, including Single sign-on and multi-factor authentication
- Utilized the Identity Management suite of products (SailPoint, Oracle, ForgeRock, Ping, Okta, CA) and of their design and implementation.
- Monitored all the links through Solar winds Tool, HP NNM & Moatis tool
- Coordinated with service providers like Reliance, Tata, AIRTEL, Cable and Wireless (now Vodafone from April 1st 2013), Sprint, Verizon, loop, XO, British Telecom, Level 3 for all the link related issues.
- Handled ticketing of new problems. Tracking and escalating of trouble tickets.
- Created, Assigned and helped in closure of Incident, and service tickets.
- Took overall responsibility for incident and service call.
- Handled Sev-1, Sev-2 incidents based on impact on production and leading ownership of the incident call till resolution of the issue.
- Involved with right teams into the incident call and closing incident within SLA or providing work around solution.
- Worked on preparing daily, weekly and Monthly Network bandwidth utilization reports.
- Performed initial trouble shooting with ping and trace report and confirming packet drops and latency through putty.
