Location: St.Louis, MO- 63368

Professional summary:

- 7 years of experience in delivering enterprise solutions in multiple domains like telecommunications, Finance and other related domains. Expertise in conceptualizing, designing and coding technical solutions using Java/J2EE and UI technology stacks to satisfy complex business problem statements
- Expert in Various Agile methodologies like SCRUM, Test Driven Development (TTD), Agile Development & Testing using Software Development Life Cycle
- Expert level skills on JSON, HTML, CSS
- Spearheaded the styling of websites, enhancing user interfaces with a focus on design consistency and visual appeal while limiting involvement in complex front-end development tasks.
- Showcased strong proficiency in JavaScript by developing custom scripts and functionalities that improved website interactivity and performance.
- Developed and maintained full-stack web applications using Node.js, React, and TypeScript, ensuring seamless integration of front-end and back-end systems.
- Built highly interactive, user-centric UIs with React, leveraging React Hooks and Context API for state management, improving user engagement by 25%.
- Designed and implemented RESTful APIs using Node.js and Express.js, enabling efficient data interaction between front-end and back-end services.
- Experience with jQuery, JavaScript, ReactJS, BackboneJS, AngularJS, and Client-side validations
- Experienced in Java Web-based, Desktop Based Development with Concepts of Object-Oriented Design (OOD), Object Oriented Analysis (OOA), Object Oriented Programming (OOP) and its implementation
- Expertise in the implementation of Core Java concepts of Java, J2EE Technologies: JSP, Servlets, JSF, JSTL, EJB transaction implementation (CMP, BMP, Message-Driven Beans), Spring, Swing, Hibernate, Java Beans, JDBC, XML, Web Services, Multi-Threading, Data structures
- Experience in Spring Modules Spring MVC, Spring Boot, Spring Microservices, Spring REST, Spring Security
- Proficient in using Amazon Web Services (AWS). Extensive experience focusing on services like EC2, Cloud Watch, IAM, S3, RDS.
- Experience in database modeling, design and development of PL/SQL stored procedures, packages in relational databases: Oracle, SQL Server, PostgreSQL and MySQL
- Strong experience with MongoDB development (reports, schema design, map reduce functions) and migrations from SQL relational databases to NoSQL databases like MongoDB, and Cassandra
- Implemented Splunk solutions to monitor, search, and analyze application logs, improving the observability and debugging process.
- Integrated unit and integration testing into CI/CD pipelines, ensuring code quality and reliability before deployment.

Technical Skills:

Languages	Java 1.6/1.7/1.8, J2EE, C#.
Web Technologies	HTML/HTML5, CSS, JavaScript, JSP, JavaBeans, Java Servlets API.
Frameworks	Spring, Hibernate, Angular JS, React JS.
Application/Web servers	Jenkins, JBoss, Tomcat
Relational Databases	Oracle, SQL server, MySQL
NoSQL Databases	MongoDB, Cassandra
Internet Technologies	HTML 5, JavaScript 1.8, CSS, JQuery, Angular JS, Node JS
Web Services	JAX-RS, SOAP, REST
Cloud Environments	AWS
Operating systems	Windows, UNIX, Mac OS, Linux
Testing Tools	Junit, Jenkin, JIRA
Methodologies	Agile, TDD (Test-Driven-Development),
Developer IDE Platforms	Eclipse, IntelliJ, Spring Tool Suite (STS), GITHUB

Professional Experience:**Mastercard, USA****May 2023 – Present****Role: Software Engineer****Description:**

Mastercard is a global payments technology company that facilitates electronic transactions between consumers, businesses, financial institutions, and governments. Founded in 1966 and headquartered in Purchase, New York, Mastercard operates a vast network that enables secure, reliable, and fast payment processing for billions of transactions annually. The company offers a range of products and services, including credit, debit, and prepaid cards, as well as payment solutions for businesses and governments.

Responsibilities:

- Designed and developed backend services using Java, ensuring efficient performance and maintainability in complex applications.
- Implemented RESTful APIs, integrating backend systems with front-end applications for smooth data exchange and user interaction.
- Applied unit testing frameworks to validate backend functionalities and ensure code robustness through test-driven development.
- Understanding of IoT-enabled platforms and integrated systems supporting end-to-end business processes.
- Designed and developed responsive, dynamic user interfaces using React, enhancing user experience across multiple platforms and devices.
- Led front-end development with React.js, implementing modern best practices like hooks, functional components, and state management with Redux.
- Collaborated with back-end teams to integrate RESTful APIs and GraphQL, ensuring smooth data flow and efficient interaction between client and server.
- Optimized front-end performance by implementing techniques like code splitting, lazy loading, and React memoization, resulting in a 30% faster load time.
- Migrated legacy JavaScript codebases to TypeScript, ensuring stricter type safety and reducing bugs by 40%, improving overall application stability.
- Worked closely with cross-functional teams to deliver high-quality, scalable solutions under strict timelines.
- Optimized backend processes to handle increased traffic, ensuring high availability and low latency of services.
- Collaborated on continuous integration and deployment pipelines to streamline the release of updates and patches.
- Demonstrated adaptability in resolving performance bottlenecks and enhancing the scalability of the backend infrastructure.
- Contributed to code reviews, providing constructive feedback and ensuring best practices in code quality and design.
- Utilized version control systems like Git to manage and collaborate on code changes in a fast-paced development environment.

Ivanti, India**Nov 2021 – Dec 2022****Role: Software Engineer****Description:**

Ivanti is a key player in the IT management and cybersecurity space, offering a comprehensive suite of solutions designed to streamline IT operations, enhance security, and improve user experience. With a focus on integration, automation, and scalability, Ivanti helps organizations optimize their IT environments and achieve their business goals.

Responsibilities:

- Led cross-functional teams in designing and implementing software architecture, ensuring adherence to policies and design patterns
- Designed RESTful APIs using Swagger, defining endpoints, request/response structures, authentication mechanisms, and error handling strategies.
- Monitored and troubleshooted transport layer issues to ensure consistent network performance and availability.
- Leveraged Angular 13 for data access, creating custom directives, factories, services
- Skilled in utilizing Oracle-specific features such as Analytic Functions, Hierarchical Queries, and Regular Expressions for advanced data manipulation
- Created and maintained detailed documentation for styling guidelines and JavaScript functionalities, facilitating better communication and collaboration within development teams.

- Optimized React applications for performance by using lazy loading, code splitting, and memoization techniques, reducing page load time and improving overall user experience.
- Designed and implemented scalable, high-performance web applications using Node.js, React, and TypeScript, ensuring optimal user experience and maintainability.
- Built and optimized RESTful APIs and microservices using Node.js to support high-traffic applications, improving system performance by 30%.
- Developed and maintained reusable, modular front-end components with React and TypeScript, promoting consistency and reducing time-to-market for new features.
- Assisted in troubleshooting and debugging styling and scripting issues, ensuring a seamless and efficient user experience on various platforms.
- Developed and executed comprehensive unit tests using JUnit to ensure code quality and reliability across multiple projects.
- Designed and implemented CI/CD pipelines using tools like Jenkins, GitLab CI, or CircleCI, streamlining the deployment process and reducing time to production.
- Integrated JUnit testing into the CI/CD pipeline, enabling automated testing and faster feedback for development teams.
- Utilized Gradle for build and dependency management, integrating with SVN, Jenkins
- Played pivotal role in bug resolution and defect coordination using JIRA
- Integrated AWS Lambda with other AWS services such as Amazon S3 and DynamoDB
- Implemented comprehensive monitoring and logging solutions using AWS CloudWatch
- Developed and maintained interfaces for seamless communication between Adobe Experience solutions and external systems, ensuring data consistency and integration efficiency.
- Applied a strong understanding of internet protocols and software engineering principles to build robust, scalable, and secure applications.
- Utilized Typescript's strong typing for early error prevention in development cycle
- Demonstrated expertise in implementing SSL protocols for secure connections
- Proficient in Kubernetes for orchestrating and automating containerized applications

Accenture, India

Jan 2018 – Nov 2021

Role: Application Development Associate

Description:

Accenture is a leading global professional services company specializing in digital, cloud, and security solutions. With a presence in over 120 countries, Accenture provides a wide range of services and solutions in strategy, consulting, technology, operations, and interactive. The company collaborates with clients to drive innovation and help them achieve their business goals through advanced technology and industry expertise. Known for its commitment to sustainability and corporate responsibility, Accenture serves clients across various industries, including finance, healthcare, and communications.

Client : Generali

Responsibilities:

- Designed and coded application components in agile environment, employing Test-Driven Development
- Utilized Spring components, hibernate for object-relational mapping, and developed React JS user interfaces with Flux for single-page application (SPA) development
- Created Angular service, integration with RESTful APIs, Angular HTTP Client to send GET/POST requests to fetch data from the server. Implemented REDUX architecture with Angular using angular-redux for unidirectional data flows
- Developed login portals using AngularJS 2.0 framework along with HTML5 and CSS3
- Developed and implemented styling elements for websites, ensuring a visually appealing and user-friendly interface while not engaging deeply in front-end development tasks.
- Applied advanced CSS techniques to create responsive and engaging web designs, contributing to improved user experience and aesthetics.
- Demonstrated expertise in developing services using AWS Elastic Search, Restful Services (JAX-RS), and Java, showcasing profound understanding of RDBMS systems, including MySQL, Oracle DB, and SQL Server
- Created reusable components and services to consume REST APIs using Component-based architecture by AngularJS.

- Utilized version control with Git and collaborated in Agile development environments, delivering projects on time with cross-functional teams.
- Integrated authentication and authorization features, ensuring secure access control in full-stack applications.
- Played a key role in adopting modern front-end technologies like React Router, Styled Components, and Webpack to improve development efficiency.
- Contributed to improving application architecture by introducing state management solutions such as Redux or Context API for large-scale applications.
- Worked on performance profiling and tuning of React applications, leading efforts to improve speed and responsiveness.
- Developed and maintained Unix shell scripts to automate system administration tasks, improving efficiency and reducing manual errors.
- Implemented server-side logic and front-end UI components for real-time applications, using WebSockets and React, providing seamless, live updates for users.
- Optimized React components with React Hooks and Redux for state management, reducing unnecessary renders and improving application performance by 20%.
- Integrated third-party services and external APIs into Node.js applications, allowing seamless data exchange between multiple platforms and improving user functionality.
- Proficiently managed web infrastructure components, including web servers and application servers, to support high-traffic applications and ensure reliable performance.
- Implemented containerization technologies, such as Docker and Kubernetes, to facilitate application deployment, scaling, and management in diverse environments.
- Set up Java/J2EE development environment using Eclipse, Maven, and Apache Tomcat
- Played key role in architecting and delivering Full Stack projects using Web pack and Node

EDUCATIONS:

Masters in Information Systems – Murray state university, Murray USA

Jan 2023 – May 2024

Bachelors in Computer Science – Reva Institute of technology and management, India

Aug 2014 – Jun 2018
