

GEETHA KRISHNA
Email: gkpavansai@gmail.com
Sr. Java Full Stack Developer

PH: 662-591-1213

Professional Summary

- 7+ years of professional experience in Information Technology (Java and J2EE technologies).
- Involved in all phases Analysis, Design, Development, Implementation and Testing of Software Applications development life cycle.
- Strong working experience in application development using JDBC, Servlets, JSP, Java Beans, JMS, Struts, spring, Hibernate and Web Services.
- Experience in developing web applications using technologies like HTML, Java Script, AJAX, DOJO, JSON, CSS, JSP Tag libraries and GWT.
- Proficient in developing web and J2EE applications using **Core Java, JSP, JSF, CSS, Servlets, EJB, JavaScript, Spring, JDBC, HTML/DHTML, XML**, and **Struts** framework.
- Proficient in writing ANT, Maven builds script to automate the application build and deployment.
- Good experience in developing and updating a web page using HTML5, CSS3, AngularJS, React.js, Java Script, backbone.js, and jQuery across various browsers and thereby achieving cross browser compatibility.
- Implemented Node.js server-side code to interact with MongoDB to store & retrieve data using Mongoose drivers.
- Experienced in working with multiple databases like Oracle, SQL Server, Cassandra, and MySQL.
- Functional knowledge in implementation of AWS Cloud based technologies like Elastic Servers, EC2 Instance and S3.
- Experienced with Perl, Shell scripting and test automation tools like Selenium RC, WebDriver, and Selenium Grid.
- Experienced in performing Data driven testing to validate the components displayed on the website using Selenium.
- Experience in **Agile software development process, Test-Driven Development (TDD), and Scrum.**
- Utilized Azure services such as **Azure Kubernetes Service (AKS), Azure DevOps, and Azure Container Registry (ACR)** for deploying, managing, and automating the deployment of containerized applications and services.
- Implemented Framework for Selenium scripts using Java.
- Refactored Java code to Kotlin for existing applications using Android Studio
- Initiated the Automation framework using Selenium Web Driver to run test cases in multiple browsers and platforms.
- Exposure to AWS and Docker.
- Highly motivated software engineer and experience in developing in web applications using JavaScript, Backbone.js and Coffee script technologies.
- Good knowledge in developing multi-threading applications.
- Good knowledge on SoapUI tool to unit testing SOA based applications.
- Configured and utilized **Apache Kafka** for resilient and scalable messaging across distributed components in the application architecture.
- Expert in implementing dynamic web applications using Application Servers like BEA WebLogic, IBM WebSphere and Apache Tomcat and deploying in various environments like Windows and Linux.
- Experience in working with Log4j, JUnit and developing ANT and MAVEN Scripts for enterprise applications.
- Expertise in Spring framework, extensively used **Spring DI, Spring AOP, Spring JDBC templates, and Spring MVC.**
- Experience in RDBMS like Oracle, SQL Server, Netezza, MS Access, DB2/AS400 and MySQL.
- Extensive experience with SQLs/Stored Procedures.
- Experience in UNIX shell scripting, FTP/SFTP and file management in various UNIX environments.

TECHNICAL SKILLS:

- Programming Languages: Java, Java 8 C, C++, SQL
- J2EE Technologies Servlets, JSP, JDBC, JNDI, OSGI, EJB, RMI, ASP, Python.
- Frameworks: Jakarta Struts, Spring, Spring MVC, JSF 2.0(Java Server Faces), Hibernate 4.0, Tiles, ibatis, Validator
- Web Technologies: HTML, DHTML, JavaScript with jQuery, Ext JS, AJAX, CSS,CMS, Yahoo UI, ice faces API , Angular,Node.js, Backbone.js
- XML Technologies: XML, XSLT, XSL, HTML5, DHTML, XSL / XSL-FO, JNDI, LDAP, SOAP
- Application/Web Servers: IBM WebSphere, IBM HTTP server, WebLogic, WebLogic Portal, JBoss, jBPM, Apache Tomcat, OC4J
- Databases: Oracle, SQL Server, MySQL, DB2
- Messaging Systems: JMS, IBM MQ-Series
- IDE Tools: IBM WebSphere Studio Application Developer (WSAD), RSA, RAD, Eclipse RCP, JDeveloper, Net Beans
- Big Data: Kafka, Cassandra.

PROFESSIONAL EXPERIENCE

JP Morgan & Chase, New York, NY

December 2023 to Present

Sr. Java Full stack developer

Responsibilities

- Developing application service components and configured beans using Spring IoC, creation of Hibernate mapping files and generation of database schema
- Developed application service components and configured beans using Spring IoC, creation of Hibernate mapping files and generation of database schema.
- Developed Restful web services using Apache Camel, Spring boot and configured Kibana as a visualization dashboard.
- Developed a responsive web design using Bootstrap and CSS3, used of LESS CSS pre-processors to give dynamic behavior to CSS by writing variables, operations and functions.
- Participated in code review and mentoring sessions and used GIT as version control and GIT Bash for GIT interactions.
- Used **props, states, keys, refs** in React.js to build the UI components.
- Worked in React JS for creating interactive UI's using One-way data flow, Virtual DOM, JSX, React concepts.
- Used **React-router** to route the pages on the client-side and built SPA.
- Implemented client-side interface using React.js, flux pattern and Redux framework.
- Experience in implementing MEAN Stack (Mongo DB, Express.js, Node.js, and React.js).
- Moved the project to Java 8 to extensively use Lambda expressions and have better connectivity to Cloud in addition adding Spring boot Libraries and UI Enhancement.
- Coded Java backend, JSP, Struts, JavaScript, Business classes
- Converted an app to microservices architecture using Spring Boot using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various Microservices in PCF.
- Implemented REST Microservices using spring boot. Generated Metrics with method level granularity and Persistence using Spring AOP and Spring Actuator.
- Developed Hibernate mapping files using different mapping strategies such as table per class hierarchy and also used Hibernate Persistence Strategy to interact with database.
- Create request and call Amber web Manager to calculate amber points.
- Enhanced user experience by designing new web features using MVC Framework like Express JS and NodeJS.

- Worked on the modernization of a legacy and outsourced UI technologies used were React. JS, CSS, Node JS, Express JS and AWS (Amazon Web Services).
- Used AJAX and JSON to make asynchronous calls to the project server to fetch data on the fly.
- Developed a tool to retrieve and send data to third party service provider this feature was implemented using REST.
- Worked on extracting event data from front end using kafka REST proxy.Used Kafka frameworks for messaging and queuing
- Implemented Kafka producer and consumer applications on kafka cluster setup with help of zookeeper
- Recommended and developed strategy for integrating internal security model into new projects with Spring Security and Spring boot.
- Created RFP (Request for Proposal) microservice to provide RESTful API utilizing Spring boot with Spring MVC.
- Used JSP's HTML on front end, Servlets as Front Controllers and JavaScript for client-side validations.
- Used Hibernate mappings, relationships between tables and entity classes to access and update information in the database.
- Involved in converting Hive/SQL queries into Spark transformations using Spark SQL, Python and Scala.
- Worked with build, maintenance, and configuration of various AWS resources like, EC2, S3, Lambda, Auto Scaling, ECS, EBS and Elastic Load Balancers
- Used AWS to deploy the project on EC2 instance Implementation of the Business logic layer for MongoDB Services.
- Developed Reporting Dashboard which will generate reports and reduce manual intervention for support activities. Developed with Spring MVC, Core Java and Sybase.
- Conceptualized, designed, and implemented automated functional API test cases using SOA test, and Soap UI.
- Used Postman API to get convenient, visual display of query results.
- Integrated code quality and static code analysis tools like SonarQube into CI/CD pipelines for ensuring code quality.
- Configured Docker containers and Kubernetes to manage dozens of micro services.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, and Docker/Kubernetes.
- Used selenium and cucumber for some part for automation testing as well.

Environment: Java 8, J2EE,React JS, XML, CSS, Spring, Hibernate, Struts, WebLogic, and REST, jQuery, AJAX, Ext JS, JavaScript, JSP, Junit, Windows, JMS, Maven, GitHub.

Meryl Lynch, New York, NY

August 2022 to November 2023

Sr. Java full stack developer

Responsibilities

- Implemented Spring Boot framework / Microservices Architecture that handles application logic making business calls interacting with web services.
- Developed complete Web tier of the application with Spring MVC framework.
- Developed and Consumed Enterprise Web Services (SOAP and RESTful). Generated client using Spring Boot Frameworks with Spring REST Template Builder.
- Used Spring Boot which is faster in building Micro services and developed Spring-based applications with very less configuration.
- Automated applications and MySQL container deployment in Docker using Python and monitor them using Nagios.
- Back-end Validation is performed using Groovy and front-end validation is done using JavaScript. Created JSP pages using standard JSTL tags, and custom tags.
- Implemented and maintained with code using Spring integrations with Hibernate, JPA as Persistence layers.
- Worked on Test Driven Development and performed unit tests using Junit and Jmockit.

- Tested SOAP and REST Services using SOAP UI and Postman Tools.
- Used Java 1.8 Method references feature to point to methods by their names and used functional Interfaces.
- Integrated legacy on-prem applications with modern front-end stacks (React/Angular) and backend services (Spring Boot), optimizing performance and enabling gradual cloud-readiness while maintaining critical internal network access controls.
- Implemented DAO for data access using Spring ORM with Hibernate.
- Experience in using Data Access Objects (DAO), Singleton, Business Delegate and Factory patterns to increase the performance of the system.
- Experience in optimizing React applications for performance by utilizing techniques like code splitting and lazy loading.
- Proficient in creating reusable and modular React components for efficient UI development.
- Writing complex SQL queries using joins, sub queries and correlated sub queries to retrieve data from the database.
- Implemented Redis-based distributed caching to enhance performance and scalability of RESTful microservices, reducing API response times by 40% and ensuring high availability in a multi-node on-premise environment
- Creating different database objects like tables, views and manipulating then using SQL queries.
- Created Workflows and Sessions to load data from the SQL Server, Oracle, flat file, and XML file sources that exist on servers located at various locations.
- Involved in daily standup and sprint planning sessions as part of Agile Scrum methodology. Imported data from XML files and converted to flat files and standard formats triggering **JAVA Batch Programs**.

Environment: Java, J2EE, Hibernate, Spring, Struts, Microservices, JSP, JSTL, JavaScript, JSF, POJO's, CSS3, Log4j, JUnit, Eclipse, BEA WebLogic, SQL, Oracle, Windows, Jenkins, CSS, JavaScript, JSON, jQuery, Ajax, Spring, Hibernate, JBoss, SVN, Subvert

Humana, Louisville, KY

January 2021 to July 2022

Java Full Stack Developer

Responsibilities

- Involved in writing JSP and JSF components. Used JSTL Tag library (Core, Logic, Nested, Beans and Html tag lib's) to create standard dynamic web pages.
- Implemented with Angular using its advantage including two-way data binding and templates.
- Identified the defects through Selenium and ensured that business processes deliver the expected results and remain reliable throughout the production release.
- Used NodeJS, Angular13 framework for developing the Single Page Application (SPA).
- Designed and developed the session module using J2EE for existing cold fusion application.
- Implemented RESTful APIs using Spring Boot for scalable and robust web services development.
- Experienced with spring framework applications like **Spring Core, Spring AOP, Spring MVC, Spring Batch, Spring Security**, and **Spring Boot** and did integration to **Microservices** into the existing system architecture.
- Implemented **Spring Integration** with asynchronous channels to enable efficient communication between different components and developed global error-handling mechanisms within the integration framework to ensure robustness and resilience in the application.
- Implemented **Spring Data JPA** for streamlined database interactions within the Spring Boot microservices, enhancing development productivity and maintainability.
- Used **Spring Batch** for scheduling and maintenance of batch jobs. Deployed the application in various environments DEV, QA, and Production.
- Designed and implemented microservices using AWS Lambda and API Gateway for serverless RESTful APIs.
- Used Spring framework with Hibernate to map to Oracle database and mapped using Hibernate Annotations.

- Used AWS Step Functions to orchestrate complex workflows involving multiple Lambda functions.
- AWS Certified Cloud Professional with expertise in designing, implementing, and managing cloud-based solutions.
- Demonstrated skills in AWS services, including EC2, RDS, DynamoDB, S3, and CloudFormation Templates.
- Utilized JMeter for performance testing and Jenkins for continuous integration in the development pipeline.
- Created and worked with various SQL and NoSQL databases such as AWS RDS Aurora DB cluster, MySQL, DynamoDB, MongoDB and connected to the database through DB Instances using the AWS Java SDK.
- Implemented build scripts using Maven and GIT technology for version control.
- Used CQL (Cassandra Query Language) to read from and write data into Cassandra database.
- Worked on NoSQL databases including HBase, Mongo DB, and Cassandra.
- Integrated redis with monitoring tools (kibana and Grafana) to store and analyze applications metrics and logs for real-time insights.

Environment: Java, Struts Framework, Oracle, HTML, PL/SQL, JDBC, Stored procedures, Web Logic Application Server, Hibernate, Ant, JAX -WS Web Services, WSDL, EJB.

American Airlines, Dallas, TX

October 2019 to December 2020

Java developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development.
- Developed a prototype of the application and demonstrated to business users to verify the application functionality.
- Created Hibernate XML files and Java class files to map the object relation Mappings.
- Developing front end of application using HTML, CSS, backbone.js, JavaScript, jQuery.
- Used Angular framework where data from backend is stored in model and populated it to UI.
- Prepared user documentation with screenshots for UAT (User Acceptance testing).
- Extensive experience in producing/consuming Rest based web services using JAX-RS, Jersey providers.
- Developed the administrative UI using Angular.js and Node.js.
- Developed and implemented the MVC Architectural Pattern using Struts Framework including JSP, Servlets, EJB, Form Bean and Action classes.
- Hands on experience with MVC JavaScript frameworks such as Backbone.js, Angular.js and Node.js.
- Developed and designed Interfaces using Swing.
- Implemented the function to send and receive AMQP messages on Rabbit MQ synchronously and asynchronously .
- Experienced in developing JMS components to send/receive messages to Queues and Topics on various brokers such as WebSphere MQ and Rabbit MQ
- Developed the web layer using Spring MVC framework.
- Worked on a code generation framework that generated Java Swing code from XML
- Developed web services in Java. Experienced with SOAP/WSDL. Have also designed and developed REST interfaces in Java.
- Developed Action Forms and Action Classes in Struts framework.
- Developed Web API using Node.JS and hosted on multiple load balanced API instances.
- Implemented Struts Action classes using Struts controller component.
- Developed Web services (SOAP) through WSDL in Apache Axis to interact with other components.
- Integrated Spring DAO for data access using Hibernate used HQL and SQL for querying databases.
- Implemented EJBs Session beans for business logic.
- Used parsers like SAX and DOM for parsing xml documents and used XML transformations using XSLT.
- To maintain the version of the files used GitHub and took the responsibility to merge code from branch to master and create new branch when further implementation started.

- Worked with GIT version, Jenkins CI/CD, Docker and JIRA for bug tracking.
- Implemented Automated execution of tests (nightly and need based) using Maven and Jenkins (continuous integration).
- Wrote stored procedures, triggers, and cursors using Oracle PL/SQL.
- Created and deployed web pages using HTML, JSP, JavaScript and CSS.
- Wrote Unit Test cases for performing unit testing.
- Used ANT automated build scripts to compile and package the application.
- Used Jira for bug tracking and project management.

Environment: Java, JSP, JDBC, Struts, Hibernate, Design Patterns, XML, PL/SQL Developer, WebLogic, Apache Axis, ANT, Clear case, JUnit, Web services, SOAP, XSLT, Jira.

Java Developer

Max Life Insurance Co. Ltd, Hyderabad, India

September 2017 to June 2019

Responsibilities:

- Involved in phases of SDLC of the project and it is including the design, Agile software development, installations, integrations and testing to complete the requirements.
- Interacted with the business requirements, analyze, design the system used various UML diagrams.
- Used HTML, JSP, JSTL tag libraries and Struts tiles to develop the presentation tier.
- XML code is used to transfer the application data between client and server. In server-side, Servlets is used to construct and parse the data in XML format and in client-side Java is used.
- Designed generic XML document and XSD document specifications for extensibility.
- Application has been developed based on Model View Controller (MVC) architecture Using Struts.
- Developed Java beans, helper classes and Servlets for interacting with UI written in JSP.
- Wrote a controller Servlet that dispatched requests to appropriate classes.
- Involved coding SQL Queries, Stored Procedures and Triggers.
- Developed the application using Core Java concepts like Multi-Threading, Swing, Spring, Struts, and worked on new features of Java 1.5 such as Enum, Annotations.
- Developed JSP's, Action classes and EJBs for user transactions.
- Developed Generic Java Scripts functions for validations.
- Used J2EE Design patterns and Data Access Object (DAO) in the integration tier layer of the project.
- Used JDBC in the Enterprise Java Beans to access the Oracle Database
- Database Development includes PL/SQL stored procedures, views, indexes, triggers, and constraints are used to reduce the response time in the application.
- Designed and developed stored procedures for data validation and access.
- Involved in coding for JUnit test cases, ANT building the application.

Environment: Agile, Java, J2EE, Struts, EJB, JSP, JSTL, Swing, Enum, JDBC, DAO, Windows, SQL Server 2005, PL/SQL, XML, Web Service, JDBC, JavaScript, ANT.
