

PAVITRA SAI VEGIRAJU

DevOps Engineer

Email: pavitrasv411@gmail.com | Location: IL USA | Phone: +1 (312) 826-0209 | [LinkedIn](#)

SUMMARY

- DevOps Engineer with 4 years of hands-on experience, specializing in automation, CI/CD pipelines, and scalable cloud infrastructure across AWS and Azure platforms.
- Proficient in AWS and Azure cloud platforms with a strong command of Terraform, Ansible, Docker, and Kubernetes.
- Built scalable and secure pipelines using GitLab CI, Jenkins, and Vault, enabling continuous delivery and infrastructure compliance.
- Implemented advanced monitoring and performance tools using Prometheus, Grafana, and Python-based simulators to improve system reliability.
- Experienced in automating security controls and compliance audits (e.g., HIPAA) across cloud-native environments.
- Strong scripting skills in Python, Bash, and Go to support automation, log processing, and deployment workflows.
- Collaborative team player with Agile experience, using Jira and Slack for cross-functional coordination and sprint planning.

TECHNICAL SKILLS

- **Programming Languages:** Python, Bash, Go
- **Cloud Platforms:** AWS, Microsoft Azure
- **Containerization & Orchestration:** Docker, Kubernetes
- **CI/CD Tools:** Jenkins, GitLab CI
- **Version Control Systems:** Git, GitHub
- **Monitoring & Logging Tools:** Prometheus, Grafana
- **Infrastructure Automation & Configuration Management:** Ansible, Terraform
- **Operating Systems:** Linux (Red Hat, Ubuntu)
- **Databases:** MySQL, PostgreSQL
- **Networking & Security:** VPN, Vault, firewalls, security groups
- **Collaboration & Agile Tools:** Jira, Slack
- **Other Skills:** Microservices, Hybrid/Multi-cloud environments

PROFESSIONAL EXPERIENCE

CVS Health

October 2024 – Present

DevOps Engineer

- Developed secure and scalable DevOps pipelines using GitLab CI, Terraform, and Vault to automate auditing workflows and enforce infrastructure compliance policies.
- Engineered custom scripts in Go and Bash to automate generation of compliance artifacts, streamline log aggregation, and ensure traceability across Kubernetes clusters in AWS and Azure.
- Integrated security best practices into CI/CD pipelines, enabling real-time scanning of infrastructure code and configurations, significantly reducing manual effort in audit preparation.
- Collaborated cross-functionally using Jira and Slack to coordinate with security, cloud, and compliance teams, achieving 95% automation coverage in audit tasks and reporting processes.
- Enhanced observability and incident readiness by deploying Prometheus and Grafana dashboards to monitor compliance drift, improving audit response time by over 40%.

VMware

July 2021 – December 2022

DevOps Engineer

- Designed and implemented a centralized observability and benchmarking solution for SaaS applications using Grafana, Prometheus, and Python-based simulators to proactively detect and resolve system bottlenecks.
- Built dynamic dashboards in Grafana to visualize latency, throughput, and error rates, which improved real-time monitoring coverage by 60% and accelerated root cause analysis.
- Configured Prometheus exporters to collect telemetry data from Azure-hosted microservices and Kubernetes clusters, streamlining environment-wide health monitoring.
- Executed advanced stress testing strategies using Python scripts to assess system behavior under load, enhancing production readiness.
- Automated alerting systems and anomaly detection workflows, cutting Mean Time to Detection (MTTD) by 35% and reducing incident resolution time.

- Teamed up with QA and development stakeholders to define performance thresholds and enforce SLAs, ensuring system uptime consistently above 99.95%.
- Contributed to CI/CD pipelines by integrating performance validation gates in Jenkins, ensuring only optimized builds progressed through the delivery lifecycle.

Trigent

June 2019 – May 2021

DevOps Engineer

- Transitioned manual deployment workflows to automated Jenkins pipelines, significantly enhancing release frequency and reducing manual errors by 40%.
- Created scalable CI/CD pipelines for enterprise Java and .NET systems, automating build and release processes while ensuring code integrity through Git.
- Standardized server configurations using Ansible automation, improving reliability and reducing configuration drift across distributed Linux systems.
- Improved pipeline structure and script efficiency through cross-functional collaboration, which significantly reduced deployment failure rates by 30%.
- Reduced operational overhead by 25% through the creation of Bash scripts that automated critical environment and deployment tasks.
- Managed and optimized MySQL and PostgreSQL database configurations as part of application deployment pipelines, ensuring high availability during release cycles.
- Researched and tested Docker-based containerization of existing applications, providing technical validation and a roadmap for full-scale implementation.
- Participated in daily Agile ceremonies using Jira, actively contributing to sprint planning and improving DevOps ticket turnaround by 20%.

PROJECTS

Infrastructure Cost Visualization Tool

- Developed a reporting pipeline to extract Terraform state data and integrate with Power BI dashboards for real-time cloud cost monitoring.
- Leveraged AWS Budgets API and Python scripts to automate budget alerts and visualize spending trends across environments.

Multi-Cloud Deployment Automation

- Automated infrastructure provisioning across AWS and Azure using modular Terraform code, standardizing multi-cloud resource deployment.
- Integrated Packer and Jenkins to build and test golden images for EC2 and Azure VMs, ensuring consistency across environments.

EDUCATION

- **Master of Science in Computer Science**
Illinois Institute of Technology, Chicago, IL

January 2023 – December 2024

CERTIFICATIONS

- **Azure Fundamentals (AZ-900)**
- **Azure Administrator Associate (AZ-104)**
- **AWS Certified Cloud Practitioner**
- **Azure AI Fundamentals**
