

RAJESH REDDY

Full Stack JAVA Developer

[PORTFOLIO](#) | ReddyRajesh2761@gmail.com | Ph- 806-600-4742 | [LINKEDIN](#) |

SUMMARY:

- Software developer with 5.9 years of experience participated in all phases of the **Software Development Life Cycle** (SDLC), using the **AGILE** methodology with SCRUM, and including requirements gathering, analysis, design, development, and testing.
- Developed web applications with strong background in **Java/J2EE** concepts like OOPs, **Multithreading**, Collections.
- Proficient with modern Integrated Development Environments (IDEs) such as **Eclipse**, **NetBeans**, and **IntelliJ** to design, build, and validate **Java EE** applications.
- Proficient in implementing secure authentication and authorization systems using **Spring Security**, ensuring safe access to web applications.
- Experienced in developing web interfaces using **HTML5**, **CSS3**, **Bootstrap**, **JavaScript**, **React.JS**, **Angular.JS** and **jQuery**.
- Expertise in **Oracle** and/or **SQL Server** and a strong database development background that provides smooth application integration and excellent performance.
- Hands-on experience in designing and building applications using **Spring Boot**, **Kafka** scalable and robust solutions.
- Proficient in implementing **DevOps** pipelines for **CI/CD** automation, ensuring seamless integration and deployment of applications using **Terraform** scripts.
- Use **AWS Glue** to integrate and migrate data from diverse sources like Amazon S3, Redshift, RDS, DynamoDB, and external databases.
- Skilled in **UNIT testing** and performance testing of applications to ensure quality and reliability.
- Thorough understanding of the **Agile Scrum** methodology, actively participating in sprint planning, daily standups, and retrospective meetings.
- Utilized **MVP**, **MVC**, and **SPA** design patterns, such as inversion of control and dependency injection, to build software designs that are adaptable and expandable.
- Experienced in using **Splunk** for monitoring, searching, analyzing, and visualizing real-time data, enhancing system performance monitoring and log management.

SKILLS:

Languages:	C#, C++, Java 11,17, J2EE, JavaScript, Python
Frontend technologies:	HTML, CSS, and JavaScript
Frameworks:	Spring Boot(3.x), React.JS, Angular 9,12 , .Net, Hibernate, Spring, IOC
Databases:	Oracle 11g, MySQL, DynamoDB, MongoDB and SQL Server
Methodologies:	SDLC, Agile, Scrum and Waterfall
Tools:	Git, GitHub, Splunk, Jira, Jupyter Notebook , Microsoft Word, Excel and RStudio
J2EE Technologies:	JSP, Servlets, JDBC, AJAX and JSON
IDEs:	Eclipse, IntelliJ, NetBeans, and Visual Studio
Messaging	JMS (Java Message Service), IBM MQ, Rabbit MQ, Apache Active MQ, Apache Kafka
Operating System:	Windows, Linux, and Mac OS
Cloud Technologies	Amazon EC2, S3, Azure AD, Terraform, Ansible, simple DB, Elastic Load Balancing, SQS, EBS, cloud front, Azure Monitor, EKS and PCF.

EXPERIENCE:

Molina Healthcare, Tampa, Florida-US

July 2023 – Present

Role : Full Stack Java Developer

- Led the end-to-end software development lifecycle (**SDLC**) for multiple agile projects, including requirements gathering, analysis, design, development, and testing, resulting in the successful delivery of applications ahead of deadlines by 15%.
- Enhanced development productivity by deploying code to **continuous integration** (CI) environments **using Jenkins**, reducing integration and testing times by 20%.
- Improved application performance by 30% and memory usage by leveraging the **Java Collections Framework** and **Python** scripts to optimize data structures and automate performance testing.
- Designed and developed **RESTful and SOAP** based web services using the JAX-RS and JAX-WS APIs, facilitating seamless communication across distributed systems and achieving 99.9% uptime for networked applications.
- Streamlined server-side monitoring by implementing a metrics collection mechanism using **Apache Kafka**, enabling real-time data streaming and reducing server response times by 25%.
- Strengthened application security by implementing **MySQL** database security measures, including encryption and user authentication, reducing vulnerabilities by 40%.
- Increased code reliability by 35% by developing over 150-unit tests with **JUnit** and **Mockito**, achieving 95% code coverage.
- Reduced front-end defects by 30% through comprehensive **UI testing** and web-based testing using **Selenium**, leveraging Firebug for efficient debugging and issue identification.
- Implemented real-time **log monitoring** and analysis using **Splunk**, reducing incident resolution time by 30%.
- Boosted build reliability and automation efficiency by developing and maintaining **CI/CD** pipelines with **Jenkins, Maven, and ANT**.
- Enhanced debugging and monitoring by implementing **Log4j**, ensuring faster resolution of issues and increasing system stability by 25%.
- Improved API reliability by conducting over 200 test cases using **Postman, SOAPUI**, and **Python**-based automation scripts, ensuring 100% functionality and adherence to business requirements.
- Simplified complex user interfaces by utilizing **JSP** Tag libraries, **JavaScript**, and third-party libraries, enhancing user satisfaction scores by 15%.
- Accelerated development of microservices using **Spring Boot** in Eclipse-based **Spring Tool Suite** (STS), successfully deploying applications on the **OpenShift** cloud platform.
- Developed robust database solutions by creating optimized **stored procedures** and functions in **PostgreSQL**, improving query performance by 40%.
- Developed dynamic web applications using **Angular**, integrating backend **RESTful and SOAP** APIs. Improved performance by optimizing Angular components and lazy loading modules, reducing application load time by 30%.
- Designed responsive and intuitive UI elements using **Bootstrap**, improving application usability ratings by 20%.
- Created dashboards and reports in **Splunk** to visualize system performance and application logs.
- Utilized **AWS S3** for secure data storage and **EC2** for scalable computing, enabling 99.99% application availability.
- Streamlined container orchestration by deploying **Docker** images on **Kubernetes** clusters in **AWS**, increasing test environment setup efficiency by 50%.
- Improved database performance and scalability by implementing **MongoDB** concepts such as sharding, replication, and schema optimization, resulting in a 30% reduction in query latency.

Goldman Sachs, Bangalore, India

June 2018 – July 2022

Role: JAVA Developer

- Involved in **Functional Testing, Regression testing** and **Integration testing** on different system components.
- Used advanced **Java 8** features like **Lambda** Expressions for Array operations, Streams, Method reference and collections.
- Used **JPA** to persist the data into the database and wrote **SQL** based queries to implement **CRUD** operations on the data.
- Worked with version control **GIT** to manage the code repository. Merging and branching using push pull commands through GIT.
- Utilized **multithreading** concepts in Java and Python to improve application responsiveness, enabling concurrent execution of tasks and efficient utilization of system resources.
- Developing **DAOs** using **Spring JPA**, Hibernate Persistence API for the database operations to interact with MySQL.
- Demonstrated expertise in developing Java-based web applications for banking/financial systems by leading the design and implementation of a Command Line Interface (CLI) for a Secure Transaction Processing Module using **Spring Boot**.
- Integrated relational databases, such as **MySQL** and Oracle, into the project to ensure secure and efficient data management in compliance with financial application regulations.
- Created responsive and aviation friendly UIs with **Bootstrap**, guaranteeing interoperability with multiple avionics display systems.
- Involved in various **SDLC** phases like Requirement gathering, Design, code Analysis.
- Experience in handling messaging services using **Apache Kafka** implemented **Micro services** architecture to make application smaller and independent **REST web services** using **Jersey** with the enabled **OAUTH**.
- Created multiple services to integrate **Apache Kafka** into existing microservice architecture to allow event-driven data flow.
- Extensive hands-on experience with databases like Oracle, designing the database and coding of **SQL, PL/SQL**, Triggers, and Views.
- Worked in integrating JMS with **SPRING BOOT** by providing which is embedded with Active MQ.
- Used **JMS** for the **asynchronous exchange** of critical business data and events among J2EE components and legacy system.
- Used **Jenkins** for CI and deployment and **Docker** for efficient containerization.
- Implemented a **Continuous Delivery** pipeline integrating Docker, Jenkins, GitHub, and **AWS AMIs**. Configured Jenkins to automatically build a Docker container leveraging Linux containers with the AMI baked in whenever a new GitHub branch is created.
- Extensive expertise in the **Spring Framework**, with a focus on developing cloud-native software solutions and leveraging its core features for scalable and robust applications. Also created **YAMEL** files for using a **swagger API** within the UI.

Certifications:

- Oracle Certified: Java SE 17 Developer

- Microsoft Azure Administrator - AZ 104

- Amazon Cloud Solution Architect

ACADEMICS:

Masters in Computers and Information Sciences | Western Illinois University, Macomb, IL | **GPA - 3.7**
Bachelors of Technology | Lovely Professional University, Jalandhar, Punjab | **GPA – 3.8**
