

Yousuf Abrar
Cloud DevOps Engineer
Contact: (832) 639-2450
Email: yousuftkw@gmail.com
LinkedIn: <https://www.linkedin.com/in/yousuftkw/>

PROFESSIONAL SUMMARY:

Over all 8 years of Experience in IT Industry working as DevOps Engineer, Security Cloud Engineer and Systems Engineer to provide solutions for Analysis, Design, develop, Support, Troubleshooting, Implementing and Integrating various applications as per Business, Security and DevOps Solutions to Large Enterprise Applications across several business domains in different infrastructures like On - Premises, provisioned, and Cloud.

- In-depth knowledge of DevOps management methodologies and production deployment Configurations.
- Experience IT work experience based on **DevOps, Networking, AWS** - Public Cloud and Release Management process that includes end-to-end code configuration, automation and deployments of artifacts for entire **SDLC** model over AWS Cloud in 24/7 uptime environments.
- Hands-on experience setting up public/private cloud infrastructures for PROD and NON-PROD environments using **EC2** instances and serverless computing using AWS Lambda Functions.
- Experience using AWS cloud Platform including **EC2**, VPC, S3, RDS, CloudFormation, Route53, CloudTrail, CloudWatch, SNS, SQS, IAM, Code Deploy, Kinesis, Lambda and CloudFront and Identity and Access Management domain products like Security Access Manager, Federated Identity Manager, RSA, Entrust, Ping, Azure AD, Qlik and Certificate Authority.
- Experience using **AWS Redshift** as a data warehouse for storing usage reports of applications.
- Experience in dealing with Windows Azure **IaaS** - Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Route, Traffic Manager, **VPN**, Load Balancing, Application Gateways, and Auto-Scaling.
- Experience in Virtualization technologies like **VMWare**, Vagrant and worked with containerizing applications like Docker and Kubernetes.
- Good knowledge in product deployment in servers, mail servers, monitoring tools & shell scripts, networking, **SQL/MySQL**.
- Expertized in using **JIRA** software with Jenkins and GitHub for real time bug tracking and issue management.
- Experience in creating **Terraform** templates for launching custom sized VPC and subnets.
- Experienced Working with Jenkins and Maven for Continuous Integration (**CI/CD**) of applications built on different platforms.
- Designed and implemented a CI/CD pipeline using **Jenkins, Docker**, and AWS EC2
- Experience with migration to Amazon web Services AWS from Datacenter.
- Experience in Administration/Maintenance of Source Control Management Tools such as, Bitbucket Server, TFS, **GitHub**, **Atlassian** Stash, **Perforce**, TortoiseGit GIT and SubVersion (SVN).
- Experience working with **Jira** and **ServiceNow**.
- Persuasive verbal and written communication skills complement a proven ability to **multitask**, maintain an organized approach, and ensure success - even when faced with high-pressure or high-risk situations.

EDUCATION:

Bachelors in Electrical and Electronics Engineering

J.N.T University, Hyderabad, India

TECHNICAL SKILLS

- Languages: Java, Python, **SQL**, PowerShell, MATLAB, and LabView
- MS-Office: Word, Excel, Access, Outlook, Outlook Express and PowerPoint.
- Technical: Jack Rabbit systems (ERP system), SQL, SAP, Tableau, DevOps, AWS, Azure, Git, **Linux**

(Red Hat), Ansible, **OpenShift**, Kubernetes and **Docker**

- Middleware: WAS, **DataPower**, WMB, IIB, WebSphere MQ, TDS
- Monitoring: **Splunk**, **Nagios**, Cloud Watch, AppDynamics, ELK Stack, Apache spark, Logstash, Graylog, Loggly, OpenNMS, Kubernetes.
- Cloud: AWS EC2, **AZURE**, GCP, **OpenStack**
- CI/CD Tools: Jenkins, **Jira**, Lambda, Gradle, Maven, Ant, UDeploy, **ServiceNow**, Chef, Hudson, Eclipse, IBM RAD, Travis CI, Codeship, Jet Brains.

Core Skills:

- Automation: **Ansible**
- Cloud Computing: **AWS**, Azure
- Containerization: **Docker**, **Kubernetes**
- Continuous Integration/Delivery: Jenkins, **Gitlab**
- Scripting: Python, Bash
- Monitoring & Logging: **Splunk**
- Database: MySQL, PostgreSQL

CERTIFICATION:

AWS Certified Solution Architect Associate

PROFESSIONAL EXPERIENCE:

Intellicheck
Cloud DevOps Engineer

July 2023 – Present

Responsibilities:

- Automated cloud deployments using Ansible, python and AWS Cloud Formation Templates.
- Created CloudFormation templates to build out new server or application stack with RDS, Autoscaling
- Managing ASP.Net applications and Application Pools.
- Used SCM (GIT) tool as source code repository, managed for branching, merging, and tagging. Agile, Developed Shell, Bash Scripts for automation purposes.
- Implemented multi-tier application provisioning in Aws cloud, integrating it with Chef.
- Designing and implementing fully automated server build management, monitoring and deployment by Using Technologies like Chef.
- Involved in various stages of Software Development Life Cycle (SDLC) deliverables of the project using the Agile (Scrum) methodology.
- Developing an automated solution using python for querying AWS and alerting the respective infrastructure owner about usage and compliance of the infrastructure.
- Configure and administer Elastic Load Balancers, Route53, Network and Auto scaling Groups for high availability.
- Provision infrastructure across AWS workloads by utilizing Terraform Enterprise.
- Providing measures for AWS cloud implementation that resulted in a significant cost reduction for the client.
- Experience in migrating on premises to Windows Azure and building Azure Disaster Recovery Environment and Azure backups from scratch using PowerShell script.
- Design and develop Cloud Service projects and deployed to Web Apps, PaaS, and IaaS
- Creating and managing the deployment pipelines via Spinnaker.
- Good knowledge in creating process templates and components in UrbanCode deploy for WebSphere, Java applications and used for day-to-day deployments.
- Working on creation of multiple Amazon Machine Images for multiple regions and different environments using Packer Scripts and automated in Ansible playbook.
- Troubleshoot Continuous integration and automated deployment and management CI/CD using Jenkins, Ansible, Docker.
- Monitoring metrics to identify the health of the services and applications using Nagios.

- Working with QA environments and SRE to ensure product quality and release cycles.
- Monitoring of app servers by scheduling cron jobs and responsible for refreshing or rehydration of DEV and QA infrastructure and make sure not to go out of compliance.
- Involve and manage configuration and working with ElasticSearch, Log stash and Kibana (ELK) for monitoring and troubleshooting.

Inspired Entertainment
Cloud DevOps Engineer

Mar 2021 – June 2023

Responsibilities:

- Use agile methodology throughout the project. Involved in weekly and daily bases release management.
- Working with a strong team of architects and backend developers to gather function and non-functional requirements.
- Worked with highly available and scalable infrastructure in AWS cloud by using various AWS services like EC2, VPC, Auto scaling, ELB, RDS, Route53.
- Deploy and monitor scalable infrastructure on Amazon web services (AWS) & configuration management.
- Optimized the EC2 instances run time using Lambda functions and CloudWatch events.
- Involved in performing application deployment to AWS Elastic Bean Stack environment.
- Configured & deployed Java applications on Amazon Web Services (AWS) for a multitude of applications utilizing the AWS stack, cloud formation.
- Having ample experience in DevOps Configuration Management tools like Chef and Puppet for deployment on multiple platforms.
- Configured and managed cloud infrastructures using Amazon Web Services (AWS), which includes EC2, S3, IAM, VPC, CloudWatch and CloudFormation.
- Involved in Visual Studio Online (VSO) and SQL Azure.
- Design solution for various system components using Microsoft Azure.
- Working as Cloud Administrator on Microsoft Azure, involved in configuring virtual machines, storage accounts, resource groups.
- Configured MFA user authentication from on-prem AD to Azure AD.
- Responsible for delivering an end-to-end continuous integration - continuous delivery system for the products in an agile development approach using Chef/Ansible and Jenkins and Shell Scripts.
- Worked on CI/CD tools Jenkins and GIT version control system for continuous smooth code release process.
- Integrated Jenkins with GitHub private repositories builds Automation tools (Maven and Ant), and Artifact repository for pushing successful build code.
- Implemented AWS CloudWatch which monitors Live Traffic, logs, Memory utilization, Disk utilization and various other factors which are important for deployment.
- Involved in editing the existing ANT build files in case of project requirement changes.
- Developing Maven Build Scripts based on the requirements. Managed Maven project dependencies by creating parent-child relationships between projects.

Nacco Industries
DevOps Engineer

Sep 2018 – Mar 2021

Responsibilities:

- Migrate SVN repositories to Git and administrate Gitlab to manage Git repositories.
- Build and improve the reliability and performance of cloud applications and cloud infrastructure deployed on Amazon Web Services.
- Create and attach volumes on to EC2 instances.
- Configure AWS VPC with public and private subnets.
- Apply Auto Scaling and Elastic Load Balancing to create high availability and fault tolerance to EC2 instances.

- Install and configure Apache, Nginx, Drupal, and WordPress on Ubuntu and Amazon Linux instances.
- Primary duties include Build and Deployment of the java applications onto different environments like Dev, QA, UAT and Prod.
- Involved in Installing Jenkins on a Linux machine and created a master and slave configuration to implement multiple parallel builds through a build farm.
- Patched all Windows servers and workstations with updates through WSUS server with Company standards.
- Practical understanding and experience in scaling Chef with 100's of agents and few Chef Servers.
- Generated Ant, Perl & UNIX scripts for build activities in QA, Staging and Production environments
- Deployed using Admin console into WebLogic Application Servers.
- Directed the Release Management Calls to synchronize with the Developers, Testers and DBA teams for successful Release.
- Presented reports to the Project manager about the progress and issues tracking key project milestones, plans and resources.
- Involved in Troubleshooting of user interface using JSP.
- Installed & configured Windows 2008 with Active Directory service.
- Pushed releases to QA, Beta, and production environments.
- Worked closely with the team to review code for compatibility issues, resolve issues as they arise, and implement deployment processes and improvements on a continuous basis.
- Used Jenkins to perform automated Builds and Deployments.
- Expert in User Management and Plugin Management for Jenkins.
- Used CONFLUENCE to maintain the product release wikis.
- Administered JIRA and managed tickets raised by keeping a close eye.
- Deployed the applications to Tomcat Application Server and static content to apache web servers.
- Established processes and tools to maintain code base integrity, including check-in validation rules and branch/merge processes.
- Documented project's software release management procedures with input decisions

Forum Energy Technologies

DevOps Engineer

Apr 2016 – Sep 2018

Responsibilities:

- Responsible for the building and deploying the artifacts into DEV, INT and QA Environments
- Used Subversion as version Control for maintaining the versions.
- Created Subversion configuration record for builds using derived objects generated during build audit process.
- Used MAVEN to automate the build process.
- Integrated the Code Quality tools Cobertura, PMD, Findbugs and Checkstyle to Maven Projects.
- Installed and Configured Nexus to manage the artifacts in different Repositories.
- Maintain automation & network simulators, develop python test scripts, run regression/sanity test release binaries.
- Configured and automated the Jenkins Build jobs for Continuous Integration.
- Used Git-hub as version Control system
- Used Apache Tomcat as application server for deploying the artifacts.
- Used Bamboo as continuous integration tool.
- Served as a partial administrator for UNIX machines.
- Created deployment request tickets in Remedy for the deploying the code to Production.
- Attended the Minor/Major Event change control meetings to get necessary approvals for the deployment request.
- Used Perl/Shell to automate build and deployment Process.
- Executed the DB Scripts (DML's) which have dependencies on the code on Oracle DB.
- Used JIRA as Issue Tracking Tool.
