

PROFILE

Proficient in configuring and maintaining critical system services, adept at developing automation scripts to streamline operations. Skilled in collaborative troubleshooting across cross-functional teams to swiftly resolve complex issues and ensure seamless operations.

WORK EXPERIENCE

Sysco LABS Technologies, US-based Client - Cloud Engineer

Dec 2022 – Jan 2025

Sysco LABS is the captive innovation arm of Sysco Cooperation, United States the world's largest food service company and a Fortune 500 company. The Cloud Operations Team, a newly established team within Sysco, focuses on streamlining processes in the cloud environment. The team's primary goals are to devise solutions for cost and resource optimisation, focus on operational efficiency and automation, guide stakeholders in cloud best practices, and manage day-to-day incident resolution.

> Key Responsibilities

- Proficient in configuring, managing and troubleshooting Windows and Linux systems.
 - Configured and optimized Windows Server roles and features, including DNS, DHCP, Hyper-V, DFS and IIS, to ensure optimal performance and reliability.
 - Diagnosed and resolved complex issues related to system performance, network connectivity, and application compatibility
 - Expertly troubleshoot and resolved complex issues arising post-patching, ensuring minimal downtime and maintaining system stability
- Managed VPCs/VNET/ load balancer in both AWS and Azure environments, ensuring secure and scalable network architecture.
- Provisioned and configured resources across AWS, Azure, and GCP cloud platforms, optimizing infrastructure to meet project requirements and performance standards.
- Managed Identity and Access Management in AWS, Azure, and GCP cloud platforms, ensuring secure and appropriate access per user requirements.
- Creating and managing policies optimizing performance and ensuring reliable operation across cloud environments.
- Demonstrated expertise in handling day-to-day incidents with minimal downtime and smooth operations using tools such as xMatters and the ServiceNow ticketing system, adhering to ITIL processes.
- Worked on different time zones and followed Agile methodology.

> Projects

- Ansible playbook for security tool deployment on windows servers
 - Developed an Ansible playbook to detect and automate the installation of essential security tools on Windows servers, reducing manual intervention by 85% and securing 100% of servers within the network.
 - Developed an Ansible playbook for disk and group/user management on Windows servers.
 - **Key Technologies:** Powershell, GitHub, Confluence, AWX, Ansible
- Infrastructure as Code (IaC) scanning for Terraform modules using GitHub Actions and Wiz cli
 - Developed an automated IaC security scanning workflow to enhance the security posture of Terraform modules in a CI/CD pipeline. Leveraged GitHub Actions and WIZ CLI to ensure compliance with best practices and security standards before deploying infrastructure.
 - **Key Technologies:** GitHub Actions, Wiz cli, Terraform, Git, YAML
- Cloud security enhancement initiative to strengthen cloud security by implementing and enforcing security best practices.
 - Conducted regular security audits and vulnerability assessments, systematically identifying and remediating security vulnerabilities.
 - Collaborated with cross-functional security teams to enhance the cloud security posture, leading to a significant reduction in potential security threats.
 - **Key Technologies:** Docker, ECS, ECR, EC2, RDS, GitHub, Kenna, Wiz

- AWS EKS cluster deployment & management
 - Supported application teams to deploy containerized applications, configure Kubernetes services, Install the AWS Load Balancer Controller and configure Ingress.
 - **Key Technologies:** EKS, Kubernetes, ECS, ECR, EC2, kubectl, GitHub, eksctl, Wiz, ELB, IAM
- Developed an automated cost optimisation solution to convert on-demand EC2 instances/VM to spot instances
 - Successfully deployed over 60 of non-production AWS accounts achieving 20% of EC2 monthly savings and provided continuous support to application teams and troubleshoot the issues.
 - **Key Technologies:** AWS Lambda, EventBridge, CloudWatch, Webhook, CloudFormation, YAML, Mixed Instance Policy, EC2 Spot Instances, Auto Scaling Groups and Boto3 (Python), Cost Explorer, AWS Billing and Cost Management, Visual Studio Code, Terraform, Azure Functions, Azure Event Grid, Azure Monitor, Azure Logic Apps, ARM templates/Bicep, YAML, VM, Azure Spot Virtual Machines, VM Scale Sets, Azure Cost Management and Billing
- Designed an automated EC2/virtual machine instance class/machine type management solution for cost efficiency in AWS and Google Cloud Platform.
 - Conducted sessions for application teams, enabling them to independently manage instance class/machine type upgrades for over 100 accounts reducing monthly expenses by 10% through efficient instance class management.
 - **Key Technologies:** AWS Lambda, Boto3, Amazon EventBridge, Amazon SNS, Amazon EC2, AWS/GCP IAM, Cloud Functions, Pub/Sub, Cloud Tasks, Python, Terraform
- Led AWS S3 management and cost optimisation projects
 - Developed a solution to identify idle S3 buckets and collaborated with 50 stakeholders to remove unnecessary buckets by setting policies resulting in over 20% monthly S3 savings
 - Documented processes and collaborated with managers, cyber security teams, and stakeholders to ensure compliance and efficiency.
 - **Key Technologies:** Amazon S3, S3 Lens Dashboard, Boto3, Python, AWS CLI, CloudWatch, Confluence
- Graviton2 migration for RDS cost optimisation
 - Scripted processes and successfully led the project to migrate all RDS instance class types across 250+ accounts, collaborating with over 100 application teams and resulting in a 25% monthly savings.
 - **Key Technologies:** RDS, Python, AWS CLI, Cost Explorer, Confluence, Turbonomic
- Legacy account decommissioning and resource removal
 - Orchestrated communication strategies and rigorously adhered to change management protocols to facilitate a seamless transition during resource decommissioning.
 - This effort increased project efficiency by 25%, successfully removing over 1,000 resources through close collaboration with stakeholders.
 - Utilised tools such as ServiceNow, CloudWatch, CloudTrail, DataDog, AWS CLI, VS Code, Tanium and Backup to track and manage the decommissioning process effectively.
- Creating cost dashboard and security dashboard using Power BI
 - **Key Technologies:** Wiz (a Cloud Security Platform), File Share, Python, Power BI, Lambda, Cost Explorer
- Terraform module creation and standardisation
 - Standardized and optimized Terraform modules, ensuring compliance with organizational policies and tagging standards; reduced deployment errors by 40% and improved infrastructure consistency across multiple environments by 30%.
 - **Key Technologies:** Terraform, GitHub, SharePoint

> **Key Responsibilities**

- Provisioned and managed block storage solutions using Pure Storage, Dell EMC Isilon, and Hitachi systems.
- Provisioned NAS shares, including NFS, CIFS, and SMB, to meet diverse business requirements.
- Troubleshoot and resolved NAS permission issues, ensuring seamless access and security for users.
- Knowledgeable in storage hardware architectures (NAS & SAN)
- Collaborated with third-party vendors to ensure timely hardware replacements, minimising downtime and maintaining system availability.
- Handled failover processes, disaster recovery and managed daily incidents to maintain service continuity and reliability.
- Worked closely with the service and change management teams to ensure all changes, operational tasks, and projects complied with maximised service standards and minimised service risks.

Sri Lanka Telecom PLC, Sri Lanka - Trainee

Feb 2019 – May 2019

> **Key Responsibilities**

- Worked on FTTH Project at Colombo Head Office & OPMC.
- FTTH infrastructure/installations/maintenance/ISDP testing.
- Attended to customer complaints, conducted field visits, tests, and maintenance.
- Knowledge of ISP operation, IPTV, IDC, 3G, LTE, and 5G.
- Knowledge of cloud computing concepts.
- Worked on Azure Server Provisioning Project for internal usage.

EDUCATION

- BSc Engineering (Honours) – Second Class Honours
Electrical and Electronics Engineering (Degree with Washington Accreditation)
Nov 2016 - Sep 2021
University of Peradeniya, Sri Lanka

CERTIFICATIONS

- [AWS Certified Solutions Architect - Associate](#)
- [Microsoft Certified: AZ-104 Azure Administrator Associate](#)
- [Microsoft Certified: AZ-900 Azure Cloud Fundamentals](#)
- AZ-800: Administering Windows Server Hybrid Core Infrastructure – Pursuing
- EX 200: Red Hat Certified System Administrator – Pursuing
- [Linux Foundation : Open Source Software Development Methods](#)
- [Intel Network Academy: Network Transformation 102](#)

KEY SKILLS

- Cloud Computing (AWS, Azure, GCP)
- OS: Windows/ Linux
- DNS/ DHCP/ Active Directory/ DFS/ Intune
- Scripting Languages (Powershell/ Bash/ Python)
- Microsoft Office 365
- Kubernetes/EKS/ Docker/ Jenkins/ GitHub/ GitLab CICD Pipeline
- ServiceNow/ DataDog/ Jira/ Wiz
- Ansible/ Chef/ Terraform/ AWX/ MySQL
- Networking (VPN, Firewall, Switches, Routers, Protocols, IP)
- **Soft Skills:** Communication Skills, Leadership & Teamwork, Effective Problem-solving Skills, Project Management Skills

AVAILABILITY AND WORK RIGHTS

- Availability: Immediately available to start work.
- Work Rights: Hold full, unrestricted work rights in Australia.
- Relocation: Open to relocation across Australia for the right opportunity.
