

Sai Kushal Nerella

Irving, TX (willing to relocate) | (607) 595-9467 | snerell1@binghamton.edu | AWS Certified Developer Associate

SUMMARY

Results-oriented Software Development Engineer with nearly 5 years of experience in building high-performing web applications. Known for a strong problem-solving mindset, efficient time management, and a collaborative work ethic. Adept at clear communication, team coordination, and maintaining thorough documentation. Looking to contribute both technical and interpersonal strengths in a fast-paced, growth-focused environment.

EDUCATION

Binghamton University, State University of New York | Binghamton, NY

Cumulative GPA: 3.5/4.0

Master of Science in Computer Science (Software Engineering and Security Track)

August 2022 - May 2024

Relevant Coursework: Data structures and Algorithms, Operating Systems, Software Engineering, Software Project Management, Data Mining, Computer Architecture, Programming Languages, Mobile Systems Security, Computer Security, Data Privacy

TECHNICAL SKILLS

Programming: Java, J2EE, Python, JavaScript, TypeScript, SQL, Node.js, Shell Scripting, Bash.

Frameworks: MVC, Spring, Hibernate, Spring Boot.

Web Technologies: HTML, CSS, React JS, Redux, JSON, Angular, JavaScript, Typescript, Vue.js, Express.

SOA: Web Services, HTTP, SOAP, Restful web services.

IDE's: Eclipse, IntelliJ, Spring Tool Suite, VS code.

Build Tools: Maven, Gradle, npm.

Operating Systems: Windows, IOS, Linux.

Cloud: AWS (CDK, AWS S3, AWS Athena, AWS Dynamo DB, AWS Cloud formation, AWS cloud watch, API gateway, AWS batch, AWS lambda, AWS cloud watch, AWS glue, AWS lake formation, AWS Athena, etc.).

Testing Tools: JUnit, Mockito, Cypress, Jest, TestNg, Postman, Cucumber, Gherkin, Acceptance Test-Driven Development (ATDD).

Databases: MySQL, Oracle DB, SQL Server, MongoDB, DynamoDB, IBM DB2, PostgreSQL

Methodologies: Agile, Scrum, Waterfall.

Additional: Object-oriented Design, Microservices Architecture, Cloud Computing, Docker, Kubernetes, CI/CD pipeline, Git, Jenkins, Jira, SailPoint IIQ, CyberArk, Tectia, Autosys

PROFESSIONAL EXPERIENCE

Citi

Irving, TX

Software Engineer

August 2023 – Current

- Led platform-wide improvements for a banking dispute resolution system, modernizing the backend design and streamlining architecture to support better performance, easier maintenance, and a smoother user experience across internal banking teams.
- Fine-tuned cloud infrastructure and network configurations on AWS, enhancing the scalability of services handling sensitive financial data and customer transactions.
- Adopted Kubernetes to efficiently manage containerized services related to transaction disputes, QC processing, and provisional credit workflows, improving operational reliability.
- Built and supported responsive, high-performance banking portals using Java (Spring Boot) for backend APIs and React with TypeScript on the frontend, enabling faster and more secure access to dispute case statuses and related documents.
- Implemented smart techniques like asynchronous processing and lazy loading to improve performance, reducing page load and backend response times by 50%.
- Actively participated in defect triage, debugging, and bug bash sessions, helping stabilize the platform and reduce customer-impacting production issues by 30%.
- Designed and maintained robust workflow engines and business logic for case routing, letter generation, and QC checkpoints, supported by thorough unit and integration testing with over 95% test coverage.
- Collaborated with cross-functional teams (QA, product, compliance) to integrate modular, reusable components, ensuring smooth feature delivery and consistent behavior across modules.
- Managed end-to-end CI/CD pipelines using Git, Jenkins, and Maven to deploy updates reliably across staging and production, speeding up release cycles while maintaining code quality.

HealthFirst

Pune, India

Associate

October 2021 – July 2022

- Designed and developed a responsive and scalable backend claim processing system using Java and Spring Boot and supported front-end teams working with ReactJS to deliver a smooth user experience across user roles (employees, managers, clients).
- Created thorough unit and integration tests using JUnit, ensuring reliability and stability of key modules like claim filing, approval, and reporting.
- Utilized Node.js and Express.js to build robust and scalable web APIs, facilitating smooth communication between frontend interfaces and backend services.
- Skilled in improving user engagement and interface interactivity by applying intuitive JavaScript features and well-designed CSS styling.

- Familiar with working across data pipelines and integrating with tools like PostgreSQL, Apache Kafka, and Elasticsearch through adjacent project collaboration and team-wide integration efforts.
- Supported development of React-based SPAs by helping structure backend services and coordinating with front-end teams using Redux for efficient state handling.
- Worked in an Agile setup, actively participating in requirement discussions, sprint planning, and daily stand-ups across 7 teams to ensure timely and coordinated project delivery.

**Cigna
Associate**

**Bangalore, India
June 2021 – October 2021**

- Led the integration of multiple healthcare data sources and developed secure, standards-compliant REST APIs using Java and Spring Boot, enhancing interoperability and improving data exchange efficiency by 30%.
- Configured and managed AWS networking setups, ensuring scalable and compliant infrastructure for health data transmission across clients and vendors.
- Conducted comprehensive unit and integration testing using JUnit and Mockito, increasing API reliability and reducing cross-system data issues by 35%.
- Implemented Kubernetes to orchestrate API services and streamline deployment, improving uptime and resource management.
- Wrote clean, maintainable code and improved system performance, contributing to a 30% reduction in resource overhead. Managed multiple concurrent API integration efforts with a 95% on-time delivery rate.
- Demonstrated strong expertise in Spring Boot, Microservices, Hibernate, Eclipse, and Git, while following Agile and TDD practices to improve codebase quality and project agility.
- Collaborated with internal teams and external vendors to refine API features and ensure compliance with HIPAA, X12, and EDIFACT standards, resulting in higher client satisfaction and more reliable data processing.

**Hexaware Technologies
Associate Software Engineer**

**Chennai, India
Dec 2020 – June 2021**

- Utilized the Spring framework with Spring Boot and Hibernate to develop robust and efficient backend systems, with MySQL as the primary database for managing transactional data.
- Engaged throughout the SDLC, gathering client requirements and designing technical solutions to development, Integration, deployment and post-production support.
- Applied J2EE design patterns such as Factory, Singleton, DAO, Session Façade, and MVC to build modular and maintainable application components.
- Wrote and executed unit tests using JUnit to ensure the stability and correctness of application modules.

**Burgeon IT Services
Associate Engineer**

**Hyderabad, India
May 2019 – Dec 2020**

- Assisted in developing internal modules for invoice and task tracking systems using Java, JSP/Servlets, and Spring MVC under supervision.
- Participated in writing SQL queries and performing basic CRUD operations in MySQL, supporting backend data management tasks.
- Collaborated on form validation and error handling for web components using JSP, HTML, and basic JavaScript to improve data input accuracy.
- Learned and applied MVC architecture and worked on controller-level logic to route requests and handle business workflows.
- Created and maintained simple JavaBeans and DAO classes, gaining hands-on experience in Java-based database access layers.
- Took part in writing test cases for small functions and bug fixes, learning JUnit basics and the importance of clean code practices.
- Attended regular team stand-ups, sprint grooming sessions, and training workshops to build foundational understanding of Agile development cycles.
- Completed internal POCs and mini projects on file upload/download, user login systems, and session management for practice and evaluation.

PROJECTS

Campus Democracy

- Designed the backend for the GSO elections, focusing on secure data processing and server-side operations.
- Created Python scripts for automating voter authentication, vote tallying, and result generation.

Parking Access Control System

- Developed and integrated a Greedy Algorithm to prioritize and allocate parking spaces based on user categories.
- Upgraded the parking management system with the new algorithm, ensuring accurate space allocation through rigorous testing.

ACHIEVEMENTS AND AWARDS

- Recognized as a Top Performer among 60 individuals across 7 teams, earning opportunities to meet company's vice president and gain insights on career development.
- Led a team to achieve top-ranking status among 17 teams, driving innovation in feature development and demonstrating excellence in project execution and technology stack selection.
