

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

Email: sanasyed2404@gmail.com

Mobile: +1 813 778 2020

<https://www.linkedin.com/in/sana-afroze-444517172/>

Professional Summary:

- Senior Software Engineer with 6+ years of experience designing, developing, and deploying scalable applications using Java, React, Node.js, .Net, Azure and AWS technologies. Proficient in cloud-native architecture (Lambda, ECS), CI/CD pipelines, and RESTful API development.
- Experienced in Agile/Scrum environments with a strong foundation in computer science fundamentals, data structures, and algorithms.
- Adept at cross-functional collaboration, technical mentoring, and delivering high-quality software under pressure.
- Expertise in integrating **front-end technologies** like **React**, **Angular** into **Node.js**-based applications, improving user interactions, and enhancing overall application performance.
- Skilled in designing and implementing **Microservices Architectures**, improving application maintainability and deployment speed.
- Administered **Express.js** security frameworks to implement sophisticated **authentication** and **authorization** strategies.
- Actively participated in all stages of the **Agile development process**, from sprint planning to retrospectives, ensuring continuous team improvement.
- Executed **REST API strategies** and managed web service deployment, showcasing proficiency in **API management** and **microservices architecture**.
- Managed **cloud service configurations** and deployments on **Azure** and **AWS**, including services like **Lambda**, **DynamoDB**, and **CloudWatch** for performance monitoring.
- Collaborated with **UX/UI designers** to develop highly responsive, user-centric web applications using **HTML**, **CSS**, **Typescript**, and **Angular**.
- Ensured responsive design for web applications, improving usability across multiple devices.
- Proficient in managing **JIRA tickets** for Change Requests (CRs) and Defects, ensuring timely resolution and efficient communication within Agile teams.
- Designed and implemented **RESTful APIs**, standardizing integration across cross-functional teams while ensuring compliance with security and authentication best practices.
- Collaborated with platform and service engineering teams to establish **integration patterns**, API contracts, and scalable data models aligned with enterprise architecture.
- Participated in **architecture review boards**, contributing to technical decision-making and ensuring alignment with organization-wide design principles.
- Mentored junior engineers, advocated for engineering excellence, and promoted adoption of **CI/CD pipelines**, GitHub workflows, and code review best practices.
- Demonstrated capability in front-end development, employing **HTML5**, **CSS3**, **jQuery**, **Angular**, **React.js** and **TypeScript** to create responsive and user-centric interfaces.

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

Mobile: +1 813 778 2020

<https://www.linkedin.com/in/sana-afroze-444517172/>

- Comprehensive experience through the entire Software Development Lifecycle (SDLC), from requirement analysis to deployment and support, specializing in agile methodologies for streamlined and effective project execution.
- Proficient in version control using **GitHub and Git**, ensuring meticulous source code management and team collaboration.
- Profound knowledge and application of Core Java, underpinned by a robust understanding of Object-Oriented Programming principles, data structures, algorithms, and concurrent programming concepts.
- Solid background in the design, development, and implementation of scalable client/server and three-tier architecture applications, reflecting a strong grasp of modern software architecture principles.
- Leveraged **.NET Standard (.NET 8, .NET 6), .NET Core 3.1 & .NET Frameworks** to build multi-threaded server-side components for large-scale Web and standalone applications.
- Hands-on expertise in developing and maintaining enterprise-level applications with **modular, scalable, and secure architecture**.
- Contributed to a **Learning Management System (LMS)**, building features like **two-factor authentication, ESO & non-ESO login flows, progress tracking, badge issuance, tile-based dashboards, and video streaming**.
- Migrated legacy AngularJS codebase to **Angular 11+**, leveraging **lazy loading, route guards, interceptors, reactive forms, RxJS, and custom components/pipes**.
- Developed and integrated backend APIs using **Node.js and Express**, and coordinated with **.NET-based services** to ensure seamless interoperability.
- Utilized **AWS Lambda** for cron jobs and event-driven automation, **S3** for file and image storage, **IAM** for role-based access control, and **CloudWatch** for log monitoring and issue resolution.
- Experience with **CI/CD pipelines** using **Azure DevOps**, Git-based workflows, and Agile/Scrum practices.
- Strong collaborator with excellent problem-solving skills and a focus on **clean, maintainable, and performance-optimized code**.
- Extensive programming in Web Technologies like **.NET (.NET 8, .NET 6 & .NET Core 3.1)**, Web services, ASP, AJAX, REST SOAP and XML.
- Migrated legacy **.NET-based backend** services to Node.js, designing and implementing scalable APIs to modernize the application architecture and ensure seamless data flow and integration.
- Proficient in various C# concepts such as Threads, Exception Handling, Collections to implement various features and enhancements.
- Strong programming skills in .NET, C# concepts such as OOP Concepts, Generics, Collections, LINQ, Exception Handling, Synchronization, Persistency, Run-Time Optimization, I/O System, Multi-Threading, Lambdas
- Strong programming skills in designing and implementation of multi-tier applications using web-based technologies like .NET, React & other JavaScript technologies
- Worked on IDEs such as Visual Studio, VS Code, SSMS for developing, deploying, and

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

<https://www.linkedin.com/in/sana-afroze-444517172/>

debugging the applications.

- Developed Microservices along with the unit test cases.
- Expertise in Project management and build automation platform like Azure Devops, creating pipelines using yaml files
- Built the reusable service components using **React and Node JS** services with **Object Oriented JavaScript Libraries, jQuery, HTML5, CSS3** based on the visual designs.
- Experience in developing applications in Single Page (SPA's) using various JavaScript frameworks such as **React, HTML5, CSS3, JavaScript**.
- Very good understanding of Object-Oriented Design (OOD), Design patterns, Design Patterns, MVC, multi-tier architecture and distributed architecture.
- Embraces Agile, Scrum, and Waterfall methodologies to adapt to project needs, fostering both flexibility and discipline in software development processes.
- Renowned for exceptional client engagement skills, committed to delivering tasks with high efficiency and effectiveness while maintaining clear communication with stakeholders at all levels.
- Strong analytical, organizational, and communication abilities, complemented by a collaborative team spirit and the capacity to drive solutions in a team-based or independent capacity.
- Adept in leveraging IDEs such as Visual Studio Code to enhance development efficiency and code quality.

Technical Skills:

Languages	Javascript, Typescript, Java, SQL, .Net
Frameworks	React, Angular, Node.js, Express.js
Web Servers	Web Logic, IIS, Linux
Tools	Git, GitHub, Postman, Visual Studio Code, Chrome DevTools, NPM, ngx-translate/core
Web Technologies	HTML, CSS, JavaScript, jQuery, SASS, Webpack
Methodologies	Agile (Scrum), Waterfall, Azure DevOps, Continuous Integration/Continuous Deployment (CI/CD)
Databases	MongoDb, ArangoDb, MS SQL
Web Services	REST, GraphQL, SOAP
Cloud Platforms	AWS (Lambda, ECS, S3, IAM, DynamoDb), Azure

Certifications:

AWS	AWS Certified Developer - Associate
Azure	Microsoft Certified: Azure Fundamentals from Microsoft
Google Cloud	Cloud Digital Leader from Google Cloud
Service Now	Certified Application Developer

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

<https://www.linkedin.com/in/sana-afroze-444517172/>

Professional Experience:

Client: Optum

Sept 2024 to Present

Role: Full Stack Developer

- Implemented scalable microservices architecture, facilitating easier maintenance and faster feature deployment.
- Created automated functionality for pop up functionality where messages can be dynamic.
- Implemented role-based access for login functionality.
- Designed and implemented a modular database structure in ArangoDB to support multiple clients.
- Architected front-end solutions using **React**, ensuring high-performance and responsive UI for complex enterprise platforms.
- Implemented reusable UI components using **React hooks** & used **React Context API** for enhanced state management.
- Built responsive, accessible UI with **React 18 + TypeScript**, using **styled-components** for theme-based, adaptive styling.
- Developed custom, reusable UI components and forms with validation to support complex healthcare workflows.
- Introduced **Mobx** framework into the application for overall **state management** & developed dynamic and responsive UI components with better performance.
- Designed & implemented the migration of multiple applications Document Integration from Box to SharePoint Online (SPO) by leveraging Microsoft Graph API which resulted in huge cost savings.
- Handled complex async logic using **Redux** and **Redux-Saga**, ensuring smooth state management across modules.
- Worked on improving security of the application by fixing DAST and SAST fixes.
- Created functions which are reusable for dynamic user interaction using JSON for UI error messages.
- Integrated Sharepoint online as a document storage layer for the applications using Microsoft Graph API & played the lead role in migrating existing application documents from Box to SharePoint online.
- Developed complex features using Parallel processing of huge files.
- Designed, developed & integrated Azure Signal R into applications for processing real time notifications on the UI using Notification Hubs.
- Developed background & recurring jobs functionality using Hangfire for processing various data files.
- Built & driven the development of many foundational & core modules using .NET Web API, Entity Framework, LINQ + Microservices with end-to-end unit testing.
- Developed complex SQL Procedures for efficient data processing from staging to transactional tables.
- Designed & developed multiple complex features within the application seamlessly which are highly scalable such as Events, Notifications & Beneficial ownerships (which could go up to any depth in terms of hierarchy)
- Built a team of highly performing engineers by mentoring & assisting them on developing

<https://www.linkedin.com/in/sana-afroze-444517172/>

functionalities in the app.

- Built reusable UI components using React, Typescript, and integrated MobX as UI data store within the application.
- Developed highly responsive web applications by collaborating closely with UX/UI designers.
- Engaged in full-stack development with HTML, Typescript, and CSS, contributing to the dynamic client-side programming.
- Administered Express.js Security frameworks to implement sophisticated authentication and authorization strategies.
- Advocated for **Inversion of control (IoC)**, streamlining dependency management and application configuration.
- Actively participated in all stages of the Agile development process, from sprint planning to retrospectives, driving continuous improvement and team synergy.
- Orchestrated the creation of interactive dashboards using React Charts, HTML, and CSS, enhancing data visualization and user engagement.
- Played a pivotal role across the Software Development Life Cycle (SDLC), ensuring adherence to best practices and achieving project milestones.
- Executed REST API strategies and managed web service deployment, showcasing proficiency in API management and microservices architecture.
- Managed cloud service configurations, deployments, and support on Azure, with experience in codebase maintenance, code reviews, pull requests, version control, and deployment processes.

Environment: React, Node.js, Typescript, SharePoint Online, Microsoft Graph API, Arango DB, HTML, CSS, JSON, Git, Azure DevOps, .net MVC, Entity Framework, C#, .NET Core/.NET, Web API, Express.js, Redux, Entity Framework, ASP.NET MVC, LINQ

Accenture, India

Sep 2020 to Jun 2024

Role: Full Stack Engineer

- Involved in the design and development phases of the **Software Development Life Cycle (SDLC)**.
- Worked with **AWS services**, focusing on **AWS Lambda, DynamoDB, CloudWatch, CodeCommit, CodeBuild, CodePipeline**, and **S3 buckets** for cloud infrastructure management and deployment.
- For **server-side implementation**, Node.js uses a modular-based approach, enhancing code reusability and performance.
- Handled the database for the Badges Module using **DynamoDB** for the Master Data setup.
- Used **Lambda Functions** for the **batch run** of badge generation, report creation, and email notifications, while configuring necessary settings in the **serverless.yml** file.
- Debugged multiple issues using **CloudWatch** for tracking application outcomes across different environments, ensuring seamless performance monitoring.
- **JWT Token Implementation:** Led the implementation of **JWT Token** authentication from the backend using **Node.js** and **Express.js**, focusing on delivering robust security fixes across several applications with a particular focus on **role-based access control (RBAC)**.
- **API Login Functionality & Security:** Designed and developed the login functionality for

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

<https://www.linkedin.com/in/sana-afroze-444517172/>

an application, incorporating **JWT token-based security** for **role-based access** and strengthening the application's security. Utilized **Node.js** and **Express.js** for backend development.

- **Backend Security Fixes with Node.js:** Worked extensively on **Node.js** to implement security fixes for multiple applications, ensuring that backend systems were secure and adhered to the latest security practices. Integrated **JWT (JSON Web Tokens)** for secure token-based authentication.
- **React.js Enhancements and Performance Optimization:** Worked on **React.js** to address critical defects and implement features such as **MSAL** integration to improve application performance, enhancing the user authentication process. Focused on optimizing **React.js** performance for smoother UI/UX.
- **MSAL Integration:** Implemented **MSAL (Microsoft Authentication Library)** into applications to streamline and secure the authentication process, ensuring seamless integration and functionality without issues.
- Used a **modular-based component approach** for structuring the application to improve performance while ensuring adherence to industry-standard linting rules.
- Implemented the latest **Angular** features, including routing, directives, data-binding, life cycle hooks, observables, dependency injection, and route guards to enhance the application functionality and maintainability.
- Worked on **critical defects** and resolved them before the launch of the application to ensure smooth delivery.
- **Cross-Technology Work:** Collaborated across **React.js** and **Node.js** environments to address both frontend and backend issues, demonstrating versatility in managing **full-stack development tasks**. Focused on improving the integration between frontend (**React.js**) and backend (**Node.js/Express.js**).
- Contributed to a large-scale **Learning Management System (LMS)** by developing new features and supporting the **migration of legacy components to Angular v11+**, enhancing performance, modularity, and maintainability.
- **Login functionality** with support for both **ESO users** (authenticated via **Microsoft Authentication using MSAL**) and **non-ESO users** (validated using **JWT tokens** and custom validations).
- **Two-factor authentication**, custom error messaging, and user-specific access control.
- **Tile-based dashboards**, **learning progress tracking**, **badge issuance**, **image styling**, **pop-up notifications**, and **video streaming interfaces**.
- Built reusable and dynamic UI components using **Angular Modules**, **Components**, **Services**, **Reactive Forms**, and **RxJS** for state and event management.
- Contributed to the backend system by working on **Node.js** and **Express.js**, participating in the **design and development of APIs**, and integrating new features with an existing **.NET-based native application**.
- Contributed to a robust **Learning Management System (LMS)** platform, focusing on the **development of key learning features** and **modernization of the front-end** by migrating legacy modules to **Angular 11+**.
- **User login flows** for **ESO (Microsoft Authentication with MSAL)** and **non-ESO users** (JWT-based authentication with role-based validation).
- **Two-factor authentication**, **learning progress tracking**, **badge issuance**, **image**

Sana Afroze

Senior Software Engineer | Azure | AWS | Microservices | Agile | React.js | Node.js | Angular | Java | .Net

Email: sanasyed2404@gmail.com

Mobile: +1 813 778 2020

<https://www.linkedin.com/in/sana-afroze-444517172/>

- rendering, file downloads, pop-up notifications, and video streaming interfaces.
- File and image assets were dynamically served from **AWS S3**, and used throughout the application for download or display upon user achievements.
- **Reactive Forms** and **Template-driven forms** with advanced validation.
- Utilized **AWS Lambda functions** to automate backend processes including **scheduled events/cron jobs** for tasks like badge generation, report creation, and email notifications.
- Managed **AWS S3** for storing and serving documents, user files, images, and downloadable content—ensuring seamless access control and performance.
- Used **AWS IAM** for defining and maintaining **role-based access policies** to secure different layers of the application.
- Monitored application health and debugged production issues using **CloudWatch** by tracking API logs, error reports, and performance metrics.
- Collaborated in **CI/CD processes using Azure DevOps**, handled version control with **Git**, managed tasks in **JIRA**, and supported cross-functional teams throughout development sprints.
- Participated in **AWS EC2 instances** as part of the deployment pipeline or supporting microservices infrastructure (usage included system configuration and occasional backend task support).
- Integrated CAPTCHA after evaluating multiple libraries for security and business fit, resulting in improved protection against automated threats.
- **Route Guards** for role-based navigation control.
- **HTTP Interceptors** for API token injection and error handling.
- **Lazy loading** for optimized performance and faster load times.
- **Environment configuration** for dynamic environment-based builds (dev, stage, prod).
- **Lifecycle hooks, custom pipes, custom directives, shared modules, and state management** using **RxJS**.
- Developed secure RESTful APIs and handled **JWT-based authentication**, ensuring role-based access control and secure user session management.
- Collaborated with cross-functional teams to ensure seamless front-end/back-end integration, effective API design, and smooth rollout of new features.
- Participated actively in **Agile sprints**, performed **JIRA-based task tracking**, handled **Change Requests (CRs)** and **defect resolutions**, and provided support during deployment cycles.
- Applied best practices for component architecture, lazy loading, and route guards to enhance performance and security.
- **Business Requirements & Defect Management:** Collaborated with cross-functional teams to manage business requirements for several applications while ensuring the timely resolution of defects across the applications using **JIRA** for issue tracking..
- Resolved many defects as part of the **POC**, while also taking on missed requirements and **Change Requests (CRs)** to ensure the application met all requirements before launch.
- Assisted colleagues in understanding their tasks and provided guidance on the expectations for each feature, ensuring efficient team collaboration.
- Handled multiple tasks in parallel, ensuring completion within the given time constraints

Sana Afroze

<https://www.linkedin.com/in/sana-afroze-444517172/>

and deadlines.

- Supported the team in times of need, offering help with difficult tasks and troubleshooting complex issues.
- Monitored the deployment cycle in a modular fashion to track the delivery of applied changes. Resolved any unexpected failures on priority to ensure on-time delivery.
- Maintained code quality by adhering to business standards and best practices, preventing future issues with ensuring long-term maintainability.
- **POC Development & Knowledge Enhancement:** Worked on several **POCs (Proof of Concepts)** aimed at enhancing personal knowledge and evaluating new technologies to improve team practices and application development. Experimented with **new tools** to stay up-to-date with industry trends.
- **JIRA Ticket Management:** Ensured the timely resolution of **JIRA tickets** related to **Change Requests** and **Defects**, including high-priority bugs and critical issues. Met deadlines and ensured effective communication with stakeholders for all updates. Utilized **Agile Scrum methodology** for sprint management.
- **Event Participation & Market Trends:** Actively participated in industry events to stay updated on the latest market trends and technology advancements, contributing to knowledge-sharing sessions on technologies **Accenture** is adopting to enhance performance.
- **Support for New Team Members:** Provided onboarding support to new team members by conducting walkthroughs of applications and **configuration changes**, promoting a collaborative and efficient work environment using **Confluence** for documentation

Environment: Node.js, React.js, Angular, Express.js, AWS Lambda, DynamoDB, HTML5, CSS3, JavaScript, TypeScript, Git, GitHub, GitLab, JIRA, AWS, Azure, OAuth 2.0, RESTful APIs, SQL, MongoDB, DynamoDB.

Global India Infotech, India

Dec 2019 to Sept 2020

Role: Software Engineer

- Involved in the design & development phase of a new project from scratch.
- Designed and developed a **retail ordering website** using **Node.js ,Typescript & Angular** to facilitate product ordering and management.
- Utilized **MongoDB** as the backend database to manage product data and user information efficiently.
- Developed **CRUD operations** (Create, Read, Update, Delete) for managing products and customer orders.
- Added **user interaction features**, including search functionality using **Redis as cache** layer, worked on calculations features that reflect changes in product availability and pricing.
- Designed and implemented real-time notifications functionality using **Signal R** & pop-ups for notifications, order confirmation, and error handling, enhancing the user experience.
- Ensured responsive design and smooth navigation to cater to different devices, improving overall usability for retail customers.

Environment: Node, Angular, Typescript, MongoDB, Signal R, HTML5, CSS3
