

# Shoaib Inam (GREEN CARD)

## SR.DEVOPS/SITE RELIABILITY ENGINEER/CLOUD ENGINEER

**Email:** inamshoaib48@gmail.com

**Contact:** +1 (945)-202-6804

---

### PROFESSIONAL SUMMARY

- 10+ years of extensive experience in implementing DevOps strategies across various environments, including Linux and Windows servers. Proficient in leveraging cloud platforms such as Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform (GCP) to build scalable, secure, and highly available infrastructures. Expertise in Continuous Integration and Continuous Delivery (CI/CD), automation, configuration management, and containerization technologies to streamline deployment processes and enhance operational efficiency.
- Experienced in utilizing AWS services like EC2, S3, EBS, VPC, ELB, IAM, Route 53, CloudFormation, CloudWatch, Lambda, API Gateway, RDS, and Auto Scaling to design and manage robust cloud infrastructures.
- Proficient in Azure services including Azure DevOps, Virtual Machines, Virtual Networks, Azure Active Directory, Azure Kubernetes Service (AKS), Azure Resource Manager, Azure Storage, Application Gateways, and Azure Monitor.
- Involved in deploying and managing resources using GCP services such as Compute Engine, Kubernetes Engine (GKE), Cloud Storage, Cloud DNS, Cloud Load Balancing, Stackdriver for monitoring and logging, and implementing security measures with Cloud Armor.
- Expertise in using tools like Ansible, Chef, and Puppet for automating configuration management and deployment processes across multiple environments.
- Extensive experience with Terraform and AWS CloudFormation for provisioning and managing infrastructure as code, ensuring consistency and scalability.
- Proficient in building and deploying containerized applications using Docker and managing complex container orchestration with Kubernetes and OpenShift.
- Experience in creating and managing Docker images, Docker Compose files, and implementing CI/CD pipelines for containerized applications.
- Skilled in setting up and managing CI/CD pipelines using Jenkins, GitLab CI/CD, Bamboo, CircleCI, and Azure DevOps, facilitating automated build, test, and deployment processes.
- Experience integrating various DevOps tools such as Nexus and SonarQube to enhance the efficiency and reliability of delivery pipelines.
- Proficient in using version control systems like Git, GitHub, Bitbucket, and SVN for efficient code management and collaboration.
- Experience integrating with Open Telemetry for enabling better observability and tracing within CI/CD pipelines.
- Experience in implementing branching strategies, code reviews, and resolving merge conflicts to maintain code quality and integrity.
- Strong scripting skills in Python, Shell, Bash, PowerShell, Ruby, Groovy, and YAML for automating routine tasks and processes.
- Developed automation scripts for infrastructure provisioning, application deployment, and system monitoring.
- Experienced in implementing and managing monitoring and logging solutions using Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Nagios, Datadog, and AWS CloudWatch to ensure system reliability and performance.
- Skilled in using build tools like Maven, Ant, and Gradle for compiling and packaging applications.
- Experience in managing and automating release processes to ensure smooth and timely deployments.
- Improved security with more Role-Based Access Control (RBAC) settings.

- Implemented robust security practices using AWS IAM, Azure Active Directory, SSL/TLS certificates, and firewall configurations.
- Experience with Extensions API in AWS , for better integration of third-party tools and custom monitoring solutions within serverless functions.
- Experience in conducting security assessments and using tools like AWS Inspector and Azure Security Center to ensure compliance and protect against vulnerabilities.
- Knowledgeable in managing databases such as MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, and SQL Server.
- Experienced in configuring and managing storage solutions across different cloud platforms.
- Familiarity with virtualization technologies including VMware, Hyper-V, and VirtualBox.
- Strong understanding of networking concepts including DNS, TCP/IP, DHCP, SSH, and VPN configurations.
- Experience working with agile methodologies and tools like JIRA, Confluence, and ServiceNow for project management and issue tracking.
- Proven ability to collaborate effectively with cross-functional teams including developers, QA, and product owners to deliver high-quality software solutions.
- Strong problem-solving skills with a focus on automation and process improvement to enhance operational efficiency.
- Excellent communication and documentation skills, ensuring clarity and transparency in all stages of the development and deployment processes.
- Committed to staying updated with emerging technologies and best practices in the DevOps and cloud computing domains.

## TECHNICAL SKILLS

- **Cloud Technologies:** AWS (Amazon Web Services) , Microsoft Azure and GCP (Google Cloud Platform).
- **Operating Systems:** Windows , Linux and MacOS.
- **Programming Languages:** Python, Java, Shell, Bash, PowerShell, Ruby, Perl, Go, YAML, Groovy, SQL, HTML, XML, JavaScript.
- **Containerization & Orchestration:** Docker, Kubernetes, OpenShift, Docker Swarm , EKS, AKS, GKE , Docker Hub and Azure Container Registry.
- **Configuration Management & Infrastructure as Code:** Ansible, Chef, Puppet, Terraform, CloudFormation, ARM Templates and Packer.
- **Version Control:** Git, GitHub, GitLab, Bitbucket, SVN, Azure Repos, Code Commit.
- **Continuous Integration & Continuous Deployment (CI/CD):** Jenkins, GitLab CI/CD, Bamboo, Azure Pipelines, CircleCI, Hudson and SMA.
- **Build & Automation Tools:** Maven, Ant, Gradle, MS Build, Jenkins, Bamboo, Kafka, Web Methods and Nexus.
- **Web & Application Servers:** Apache Tomcat, WebSphere, WebLogic, IIS, JBoss, Glassfish and TIBCO.
- **Database Management:** Oracle, SQL Server, PostgreSQL, MySQL, DynamoDB, MongoDB, Cassandra, DB2, Cosmos DB and NoSQL.
- **Monitoring & Logging:** Prometheus, Grafana, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Nagios, Dynatrace, Datadog, New Relic, Nimbus, Graylog, AWS CloudWatch, Azure Monitor and Google Stackdriver.
- **Networking & Security:** TCP/IP, DNS, DHCP, FTP, SFTP, NFS, LDAP, VPN, Firewalls, SSH, HTTP/HTTPS, SAMBA, TELNET, SMTP, SNMP, SSL/TLS, WAF, AWS IAM, Azure AD, SSL Certificates and Veritas NetBackup.
- **Project Management & Collaboration:** Jira, Confluence, ServiceNow, Atlassian Tools, Basecamp, MS Project and Azure DevOps.
- **Testing Tools:** Selenium, JUnit, Cucumber, Mockito, NUnit, HP LoadRunner, SonarQube and SonarCloud.
- **Virtualization & Backup Management:** VMware, vCenter, VCA, Hyper-V, VirtualBox , SolarWinds, EMC Avamar, Veritas NetBackup and AWS Backup.

## PROFESSIONAL EXPERIENCE

**Client: Rogers Corporation**

**Nov 2021 - Present**

**Chandler, AZ**

**Sr. DevOps / Site Reliability Engineer/ Cloud Engineer**

### **Roles & Responsibilities:**

- Scheduled, deployed, and managed container replicas on Kubernetes clusters across AWS EKS, Azure AKS and GCP ensuring high availability and optimal performance.
- Developed automation scripts and tools to manage platform infrastructure, improving reliability and reducing upgrade times for clusters and services.
- Built and maintained dashboards and visualizations in Splunk and Datadog to monitor system health, define alerts, and automate responses.
- Provided operational support to software development teams for launching and managing applications on Kubernetes, including troubleshooting and performance tuning.
- Designed and configured virtual data centers in AWS, Azure and Azure including VPCs, subnets, security groups, route tables, and load balancers to support enterprise applications.
- Automated infrastructure provisioning and application deployments using Terraform, CloudFormation, and ARM Templates, ensuring consistent and scalable environments.
- Managed AWS cloud resources including EC2, S3, RDS, IAM, EBS, and Auto Scaling, implementing serverless architectures using AWS Lambda, API Gateway, and DynamoDB.
- Configured Docker environments, created custom Docker images, and deployed containers across multiple platforms, integrating with CI/CD pipelines.
- Established and managed CI/CD pipelines using Jenkins, GitLab CI/CD, Azure Pipelines, and Bamboo, automating build, test, and deployment processes for multi-tier applications.
- Developed Ansible playbooks and Chef cookbooks to automate server provisioning and application deployments, streamlining operations and reducing manual effort.
- Integrated Jenkins with Docker and Kubernetes for continuous delivery, leveraging Jenkins shared libraries to re-design CI/CD processes and improve efficiency.
- Implemented Blue-Green deployments and automated rollback mechanisms, ensuring zero-downtime releases and reliable application delivery.
- Implemented comprehensive monitoring and logging solutions using Prometheus, Grafana, ELK Stack, Splunk, and Nagios, ensuring system reliability and performance.
- Developed security protocols and configured cloud resources using AWS IAM, CloudTrail, and Azure Active Directory to protect against vulnerabilities and ensure compliance.
- Managed cloud-based security measures including network access control lists (NACLs), security groups, and firewalls to safeguard applications and data.
- Collaborated with core engineering and security teams to design, test, and implement scalable, secure solutions across cloud and on-premises environments.
- Provided 24/7 operational support, diagnosing and resolving incidents, managing error budgets, and ensuring continuous system uptime.
- Created and maintained detailed documentation of system architecture, tools, and processes, facilitating knowledge transfer and ease of maintenance.

- Developed scripts in Python, Shell, Groovy, and Terraform to automate routine tasks, infrastructure provisioning, and application deployments.
- Automated patching processes for AWS ECS clusters, achieving zero downtime and ensuring seamless operations.
- Managed the automation of deployment processes using Jenkins, Ansible, and Docker, supporting continuous integration and delivery across multiple environments.

**Client: Oak Street Health**

**May 2019 – Oct 2021**

**Chicago, IL**

**Sr. DevOps / Site Reliability Engineer**

### **Roles & Responsibilities:**

- Designed, configured, and managed public/private cloud infrastructures utilizing AWS, Azure, and OpenShift. Worked extensively with AWS services such as EC2, S3, Elastic Load Balancers, Elastic Beanstalk, RDS, DynamoDB, VPC, IAM, CloudFormation, CloudWatch, and more.
- Automated cloud deployments and infrastructure provisioning using Terraform, AWS CloudFormation, and ARM Templates, ensuring scalable, fault-tolerant environments.
- Migrated on-premises applications to cloud platforms like AWS and Azure, leveraging services like Azure IaaS, VPC, Load Balancers, and Auto-Scaling groups for high availability and performance optimization.
- Implemented and managed Kubernetes clusters across AWS EKS, Azure AKS, and GCP, ensuring high availability, fault tolerance, and efficient container orchestration.
- Automated the deployment, scaling, and management of Docker containers using Docker Compose, Docker Swarm, and Kubernetes, optimizing application delivery.
- Created custom Docker images to streamline the migration of legacy applications to cloud platforms and managed containerized environments using Ansible and Jenkins.
- Established and managed CI/CD pipelines using Jenkins, GitLab CI/CD, and Azure DevOps, integrating with various DevOps tools like Nexus, SonarQube, and JFrog Artifactory.
- Developed Ansible playbooks and Chef cookbooks to automate server provisioning, application deployments, and configuration management across multiple environments.
- Designed and deployed automation frameworks for application build and release processes, reducing manual intervention and improving deployment consistency.
- Developed automation scripts using Python, Shell, Groovy, and PowerShell to automate routine tasks, infrastructure provisioning, and cloud resource management.
- Implemented AWS Lambda functions for automating changes to S3 buckets and DynamoDB tables, and created Python scripts to manage AWS services like EC2, S3, and CloudFront.
- Automated the migration of on-premises applications to cloud environments using Azure Site Recovery and AWS Database Migration Service.
- Configured and managed monitoring and logging tools like Splunk, Dynatrace, Prometheus, Grafana, and ELK Stack to ensure system reliability and performance.
- Developed security protocols using AWS IAM, Azure Active Directory, and Kong API Gateway, implementing best practices for access control, compliance, and threat detection.
- Automated security configurations and compliance checks using CIS Standards, ensuring that all cloud environments meet organizational security requirements.

- Managed databases including MongoDB, SQL Server, and Oracle, automating database deployment and configuration using Ansible, Terraform, and Shell scripts.
- Implemented virtualization solutions using VMware ESX, vSphere, and Azure Virtual Machines, automating the deployment and management of virtual environments.
- Automated Oracle DB installation and licensing processes, and developed SQL queries, functions, and triggers for database management in production environments.
- Provided 24/7 support for production environments, troubleshooting issues, and ensuring system uptime. Worked closely with developers, DBAs, and security teams to design, implement, and maintain robust, scalable solutions.
- Created and maintained detailed documentation for system architecture, processes, and tools, facilitating knowledge transfer and continuous improvement within the team.
- Acted as the primary point of contact for Azure development and cloud automation, driving efficiency and reducing storage costs through automation and optimization.

**Client: Werner Enterprises**  
**Omaha, NE**  
**DevOps Engineer**

**Nov 2017 – Apr 2019**

### **Roles & Responsibilities:**

- Designed, configured, and managed cloud infrastructures using AWS, Azure, and GCP services, including EC2, S3, RDS, Elastic Load Balancer, VPC, IAM, CloudFormation, and Azure Virtual Machines.
- Automated cloud deployments and infrastructure provisioning using Terraform, AWS CloudFormation, and Azure Resource Manager (ARM) templates, ensuring scalable and fault-tolerant environments.
- Implemented serverless architectures using AWS Lambda, API Gateway, and DynamoDB, and automated backups and disaster recovery processes using AWS S3 and Glacier.
- Managed containerized applications by deploying and orchestrating Kubernetes clusters on AWS EKS, Azure AKS, and GCP. Created Docker containers, managed images, and automated deployments using Docker Swarm and Kubernetes.
- Integrated Docker with CI/CD pipelines, automating the build, test, and deployment processes for microservices using Jenkins, Ansible, and Helm.
- Deployed and managed OpenShift environments for containerized applications, optimizing for scalability, performance, and security.
- Established and maintained CI/CD pipelines using Jenkins, GitLab CI/CD, and Azure DevOps, integrating with various tools such as Nexus and SonarQube.
- Developed automation scripts using Python, Shell, Groovy, and PowerShell to streamline build, deployment, and configuration management processes across multiple environments.
- Configured Jenkins jobs, Docker containers, and Ansible playbooks to automate deployment pipelines, enabling continuous delivery of applications with minimal manual intervention.
- Developed and maintained automation scripts in Python, Shell, Groovy, and YAML to automate cloud resource management, application deployments, and routine tasks.
- Automated the deployment and configuration of infrastructure using Terraform, Ansible, and Puppet, reducing deployment times and ensuring consistency across environments.
- Created custom scripts to automate AWS services such as EC2, S3, and IAM, and implemented PowerShell scripts for automating Azure resource management and deployment processes.

- Implemented monitoring and logging solutions using tools like Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, and Nagios to ensure system reliability and performance.
- Configured security protocols and access controls using AWS IAM, Azure Active Directory, and GCP IAM, enforcing compliance with organizational security policies.
- Automated security configurations and compliance checks using CIS standards, ensuring cloud environments meet stringent security requirements.
- Managed and automated database operations for SQL Server, MySQL, MongoDB, and DynamoDB using Ansible, Terraform, and Shell scripts.
- Implemented and managed virtualized environments using VMware, ESXi, and Azure Virtual Machines, automating deployment and scaling processes for virtual servers.
- Developed database queries, functions, and stored procedures to support application development and data management in production environments.
- Provided 24/7 support for production environments, diagnosing and resolving incidents, managing error budgets, and ensuring system uptime.
- Collaborated with cross-functional teams including developers, DBAs, and security teams to design, implement, and maintain robust, scalable solutions.
- Created and maintained detailed documentation of system architecture, processes, and tools, facilitating knowledge transfer and continuous improvement within the team.

**Client: Alight Solutions**  
**Chicago, IL**  
**Linux/Unix Administrator**

**Mar 2014 – Oct 2017**

### **Roles & Responsibilities:**

- Implemented and managed CI/CD pipelines using Jenkins, integrating with tools like Maven, GIT, and Docker to automate build, test, and deployment processes.
- Developed and maintained build and deployment scripts using Maven and Jenkins, facilitating smooth transitions across various environments such as QA, UAT, and Production.
- Configured Jenkins jobs to automate deployments, including the use of plugins like DSL, parameterized triggers, and pipeline view plugins for efficient CI/CD management.
- Automated the deployment of builds to different environments using Jenkins, integrating with version control tools like GIT and SVN for seamless source code management.
- Established and maintained branching, build, and release strategies, utilizing GIT for version control, and managed repositories with GitHub and BitBucket.
- Designed, configured, and managed cloud infrastructure on AWS, including EC2, S3, RDS, ELB, and VPC, automating tasks using Terraform, CloudFormation, and Python scripts.
- Implemented and maintained serverless architectures using AWS Lambda, API Gateway, and DynamoDB, automating deployments and scaling processes.
- Developed and maintained dashboards and monitoring systems using AWS CloudWatch, setting up alarms and alerts to ensure system health and performance.
- Provided production readiness and operational support for AWS infrastructure, participating in performance analysis, capacity planning, and demand forecasting.
- Deployed and managed containerized applications using Docker, Kubernetes, and OpenShift, automating the orchestration, scaling, and management of Docker containers.

- Integrated Docker with CI/CD pipelines to build, test, and deploy applications in a containerized environment, utilizing Kubernetes for container orchestration.
- Created and configured Kubernetes clusters, managing nodes, pods, and services to ensure high availability and fault tolerance in production environments.
- Developed Ansible playbooks and Chef cookbooks for automating the deployment and management of containerized applications across various cloud platforms
- Administered and maintained Linux servers, including RedHat and CentOS, performing tasks such as installation, configuration, backup, recovery, and system monitoring.
- Automated routine system administration tasks using shell scripting and CRON, including disk usage monitoring, file system cleanup, and user management.
- Managed Apache, Tomcat, and JBoss servers, handling installation, configuration, and troubleshooting to ensure reliable application hosting.
- Provided production support for Unix-based systems, managing enterprise environments using VMware, and performing database administration tasks for MySQL and Oracle.
- Developed automation scripts using Python, Shell, and Bash to streamline deployment processes, manage cloud resources, and automate routine tasks.
- Automated cloud deployments and infrastructure management using Puppet, Chef, and Ansible, writing manifests, modules, and playbooks for efficient configuration management.
- Implemented rapid provisioning and life-cycle management for cloud resources, using tools like Terraform, Jenkins, and custom Ruby/Bash scripts.
- Built and maintained cloud operations tools for monitoring, notifications, trending, and analysis, achieving high efficiency in cloud operations through automation.
- Provided Level 3 support for troubleshooting and restoring services in production, managing incident response, and ensuring system reliability.
- Configured and managed security protocols using AWS IAM, including user and role management, access control, and compliance monitoring.
- Monitored and fine-tuned system performance for server environments, using tools like Nagios, Webmin, and AWS CloudWatch to identify and resolve issues proactively.
- Collaborated with cross-functional teams to design, implement, and maintain robust, scalable DevOps solutions, driving standardization, simplification, and automation of workflows.
- Participated in the design and development phases of projects, contributing to system architecture, use case diagrams, and REST API documentation.

## EDUCATION

**SZABIST Islamabad**

**Bachelor of Science in Engineering**

Major: Computer Science

## CERTIFICATIONS

**AWS Certified DevOps Engineer – Professional**

**AWS Certified Solutions Architect – Associate**
