Technology: .NET DEVELOPER

Summary

- Over **10 years of experience** in **.NET Full Stack Development**, specializing in building scalable and performant applications using **C#, ASP.NET Core**, and **Blazor**.
- Expertise in **backend development** using **ASP.NET Core, MVC, ADO.NET, SignalR**, and **Web API** for creating RESTful and real-time applications.
- Proven experience in developing modern **frontend applications** using **Angular, React.js (Hooks, Redux for state management)**, **HTML5, CSS3**, and **JavaScript**.
- Strong knowledge of **Micro Frontend Architecture, GraphQL**, and **Single Page Application (SPA)** for optimizing frontend performance.
- Hands-on experience with cloud services, specifically **AWS (EC2, S3, Lambda, Kubernetes)** and **Azure like AKS, Azure Active Directory, Blob Storage, Key Vault** for building highly scalable and secure applications.
- Experience with **OAuth 2.0, JWT Tokens**, and **Azure Active Directory** for secure authentication and authorization in applications.
- Expertise in **SQL** like Oracle, MySQL, PostgreSQL and **NoSQL** databases (**MongoDB, Cassandra, Cosmos DB, DynamoDB**), including optimizing stored procedures, queries, and performance tuning.
- Proficient in implementing **DevOps** practices with tools like **Docker, Kubernetes, Azure DevOps, Jenkins, Ansible**, and **Terraform** for CI/CD pipelines and infrastructure automation.
- Worked extensively with **unit testing** frameworks like **NUnit, MSTest**, and **Selenium** to ensure high-quality code with automated testing.
- Proficient in **real-time data processing** and messaging systems, including **Apache Kafka, RabbitMQ, AWS SQS**, and **Azure Service Bus**.
- Skilled in **data serialization** formats such as **JSON**, and **XML**, and experienced in parsing and generating API responses.
- In-depth experience with **microservices** architecture, implementing **RESTful APIs**, and handling cross-service communication using **message queues**.
- Integrated **GraphQL** into both frontend and backend systems for efficient querying and optimized data retrieval.
- Excellent knowledge of **containerization** and **orchestration** with **Docker** and **Kubernetes** for scaling and managing distributed applications.
- Proficient in **cloud-native architecture**, deploying applications on **AWS** such as EC2, Lambda, S3 and **Azure** such as AKS, Azure Functions to ensure high availability and reliability.
- Strong experience with **OAuth 2.0** protocols, ensuring secure API access and implementing **JWT tokens** for token-based authentication.
- Implemented **microservices** on **Kubernetes** clusters for seamless scaling and efficient resource management.

- Expertise in **Agile methodologies**, **Scrum**, and **Kanban** for project management and iterative development.
- Familiar with **Prometheus**, **Grafana**, **Splunk**, and **Datadog** for monitoring and logging applications in production environments.
- Strong communication skills, collaborating effectively with cross-functional teams to ensure timely delivery of high-quality software.
- Knowledgeable in **version control systems** such as **Git**, **GitHub**, **Bitbucket**, and **Subversion** for managing code repositories.
- Implemented **secure coding practices** by ensuring proper **SSL/TLS encryption** and utilizing secure libraries for data protection.
- Deep understanding of **RESTful architecture**, and experience with designing and implementing **RESTful APIs** using **ASP.NET Core** and **Web API**.
- Proficient in **frontend testing** using **Jasmine** and **Karma**, and backend testing using **JUnit** and **Mockito** to ensure application stability.
- Passionate about continuous learning and keeping up-to-date with the latest trends in **.NET technologies**, **cloud computing**, and **DevOps practices**.

Skills

- ☐ **Languages:** C#, JavaScript, TypeScript, HTML5, CSS3, SQL
- ☐ **Frontend:** Angular, React.js (Hooks, Redux), Blazor, jQuery, GraphQL, SPA
- ☐ **Backend:** .NET Core, ADO.NET, SignalR, Blazor, ASP.NET MVC, Web API, Microservices
- ☐ **Cloud:** AWS (EC2, S3, Lambda, SQS), Azure (AKS, Blob Storage, Key Vault, Active Directory)
- ☐ **Messaging:** Apache Kafka, RabbitMQ, AWS SQS, Azure Service Bus
- ☐ **DevOps:** Docker, Jenkins, Azure DevOps, Terraform, Ansible
- ☐ **Databases:** SQL Server, MySQL, PostgreSQL, MongoDB, Cosmos DB, DynamoDB, NoSQL
- ☐ **Security:** JWT, OAuth 2.0, SSL/TLS, Azure Active Directory
- ☐ **Testing:** NUnit, MSTest, Selenium, Postman, Swagger, SoapUI
- ☐ **Monitoring:** Prometheus, Grafana, Splunk, ELK Stack
- ☐ **Version Control:** Git, GitHub, Bitbucket
- ☐ **Methodologies:** Agile, Scrum, Waterfall

Professional Summary

Client : DISCOVER

February 2023-Present

- **Developed a scalable e-commerce platform** using **ASP.NET Core**, **Blazor**, and **SignalR** for real-time updates on products, cart, and inventory.
- **Integrated GraphQL** on the backend for optimized querying between the frontend and backend, reducing data load time and improving user experience.
- Used **AWS EC2** instances to host microservices and **S3** for product image storage, enabling better data management and scalability.
- **Implemented JWT tokens** for secure authentication and authorization of users and **OAuth 2.0** for payment gateway integration.

- Created highly interactive UI components with **React.js (Hooks, Redux)** and **Angular**, enabling real-time product listings, updates, and notifications.
- Developed **hybrid mobile apps** using **Ionic with Angular** to deliver a seamless shopping experience across Android and iOS devices.
- Built **real-time product listing and cart updates** in the mobile app by integrating **SignalR** with Ionic components, enabling users to get instant inventory changes.
- **Utilized Azure Kubernetes Service (AKS)** to ensure scalable microservices architecture for high-traffic periods, such as Black Friday sales.
- Automated **CI/CD deployment** using **Azure DevOps**, resulting in faster production cycles and minimal downtime.
- **Integrated MongoDB** for dynamic product categorization and **SQL Server** for customer transaction data, optimizing query execution time.
- Developed **real-time messaging** features using **SignalR**, ensuring customers received real-time product updates and order status changes.
- Created and optimized **SQL queries** and implemented **stored procedures** to enhance database performance and ensure faster checkout processes.
- Deployed **Azure Blob Storage** for efficient and cost-effective storage of product images and user-generated content.
- Enabled **unit testing** with **NUnit** to ensure all API services and frontend interactions were bug-free.
- **Optimized SQL queries** and implemented **data caching** strategies using **Redis** to reduce database load and improve page load speed.
- **Implemented Grafana** and **Prometheus** for monitoring user engagement metrics, inventory levels, and application health.
- Integrated **AWS SQS** for asynchronous messaging to handle user orders and notifications, reducing backend processing time.
- **Ensured data security** by implementing **encryption** both at rest and in transit using **Azure Key Vault** and **SSL/TLS**.
- Developed and maintained secure API endpoints using **OAuth 2.0** for third-party payment integrations.
- Contributed to a **40% increase in customer retention** by improving the performance and reliability of the shopping platform.
- Improved checkout speed by implementing **Asynchronous API Calls** and reducing latency during peak load times.
- Successfully delivered a full-featured, high-performance, and secure e-commerce platform for the client, resulting in **increased sales by 30%** during the first quarter.

Client : AMERICAN AIRLINES

October 2019-February 2023

- Designed and developed a **real-time stock trading platform** using **ASP.NET Core**, **SignalR**, and **Web API** for instant trading updates and notifications.
- Deployed services on **AWS EC2** for scalable infrastructure and **AWS Lambda** for serverless event-driven actions.

- Integrated **AWS SQS** for managing trade orders asynchronously and **Azure Service Bus** for real-time trade alerts.
 - Utilized **SignalR** to provide **real-time notifications** on stock prices, trades, and alerts for thousands of active traders.
 - Built hybrid mobile applications using **Ionic Framework with Angular** to enable real-time access to stock prices, trade execution, and alerts for on-the-go traders.
 - Integrated **SignalR** within Ionic apps to push **real-time stock updates and notifications**, ensuring immediate reflection of market changes.
 - Implemented **JWT token** authentication for secure user login and session management, providing secure access to trading services.
 - Created and maintained **microservices** for trade execution, portfolio management, and real-time market data processing.
 - Built a **highly available cloud infrastructure** using **Azure Kubernetes Service (AKS)** and **AWS** to ensure system uptime during volatile market conditions.
 - Developed **RESTful APIs** to integrate real-time stock data and third-party market feeds into the trading platform.
 - Ensured **fast trade execution** by implementing low-latency, high-throughput services using **ASP.NET Core**.
 - **Optimized SQL queries** to handle large data sets and reduce the overhead of trader-related transactions, resulting in faster trade execution.
 - Implemented **Postman** and **Swagger** for **API testing** and documentation, ensuring robust API security and reliability.
 - Enabled **real-time data updates** for users using **SignalR**, ensuring that all trading decisions were made with the latest market information.
 - Designed a **high-frequency trading engine** with low latency by optimizing backend services and **database queries**.
 - Managed and optimized the system's **message queueing system** using **AWS SQS** and **Azure Service Bus** to decouple services.
 - Integrated **GraphQL** to allow frontend applications to fetch only necessary data, reducing bandwidth consumption and improving application performance.
 - Built **secure APIs** with **OAuth 2.0** for third-party financial services, enabling secure user authorization and data sharing.
 - Utilized **Grafana** and **Prometheus** for system monitoring, tracking trade execution times, and ensuring seamless operation.
 - Automated deployment pipelines with **Jenkins** and **Terraform**, ensuring fast and secure deployments across multiple cloud platforms.
 - **Improved the execution speed** of high-frequency trades, contributing to a **10% reduction in latency** and **15% increase in trading volume**.
 - Contributed to the successful implementation of **real-time stock trading and order management systems**, enhancing market operations for clients.
-

- Developed a **patient management system** for healthcare organizations using **ASP.NET Core**, **Blazor**, and **SignalR** for real-time updates on appointments and test results.
 - Implemented **JWT tokens** and **OAuth 2.0** for secure authentication and authorization of healthcare professionals and patients.
 - Integrated **Azure Blob Storage** for secure storage of medical records and patient images, ensuring compliance with **HIPAA regulations**.
 - Created and maintained **RESTful APIs** to allow seamless integration with external healthcare applications and medical devices.
 - Developed the **UI** using **React.js** and **Angular**, enabling responsive design and a smooth patient experience.
 - Worked with **MongoDB** and **Cosmos DB** for flexible and scalable storage of patient records and appointments.
 - Designed and implemented **microservices** to handle patient data, appointments, and billing in a secure and efficient manner.
 - Deployed services on **Azure Kubernetes Service (AKS)** and **AWS EC2** to ensure high availability of patient management systems.
 - Ensured data integrity and security by implementing **SSL/TLS encryption** for patient data and using **Azure Key Vault** for secure key management.
 - Implemented **unit tests** using **NUnit** and **XUnit** to ensure system reliability and reduce errors in production.
 - Managed and optimized database performance using **SQL Server** and **MongoDB**, ensuring fast retrieval and manipulation of patient records.
 - Utilized **Prometheus** and **Grafana** for health monitoring and ensuring continuous availability of healthcare services.
 - Developed a **real-time messaging system** using **SignalR** to notify patients about their test results and appointments.
 - Implemented **Azure Active Directory** for managing patient and staff roles and ensuring proper access control.
 - Integrated **FHIR** for standard healthcare data exchange, improving the interoperability of patient records across platforms.
 - Automated build and deployment processes using **Jenkins** and **Azure DevOps**, improving deployment speed and reliability.
 - Ensured compliance with healthcare industry regulations, including **HIPAA** and **GDPR**, for secure patient data handling.
 - Contributed to a **30% improvement in patient engagement** and a **25% increase in overall operational efficiency**.
 - Optimized patient search and appointment scheduling features by improving query performance and reducing load times.
 - Delivered a fully functional, secure, and scalable **patient management system** that significantly improved healthcare outcomes and operational efficiency.
-

Client: VERIZON

May 2014-January 2015

- Developed a **patient management system** for healthcare organizations using **ASP.NET Core**, **Blazor**, and **SignalR**.
- Developed and maintained internal enterprise applications using **ASP.NET MVC**, **C#**, and **ADO.NET**, improving the performance and reliability of customer and billing management systems.
- Implemented **Blazor components** for interactive UI features and ensured seamless integration with backend APIs for real-time user interaction.
- Utilized **SignalR** for real-time communication in customer notification and service provisioning dashboards, reducing customer support dependency by 20%.
- Integrated **RESTful APIs** using **ASP.NET Web API**, enabling seamless data exchange across Verizon's internal services.
- Worked with **SQL Server** and **PostgreSQL** for managing large volumes of billing and usage data; optimized complex queries and stored procedures to reduce execution time by 30%.
- Employed **RabbitMQ** for asynchronous messaging between billing services and payment processors, ensuring reliable and decoupled service communication.
- Contributed to migrating legacy monolithic applications into **microservices** hosted on **AWS EC2**, improving deployment flexibility and system scalability.
- Built responsive web pages using **AngularJS**, **JavaScript**, and **HTML5/CSS3**, enhancing user experience and mobile compatibility.
- Implemented secure authentication mechanisms using **OAuth 2.0** and **JWT tokens**, ensuring role-based access control for customer and admin portals.
- Automated CI/CD pipelines with **Jenkins** and **Git**, reducing deployment times and improving build reliability across development environments.
- Worked in Agile development teams using **Scrum methodology**, actively participating in sprint planning, code reviews, and daily stand-ups to ensure project delivery milestones.
- Conducted unit and integration testing with **NUnit** and **Postman**, achieving high test coverage and minimizing defects in production deployments.
- Collaborated with cross-functional teams to enhance application security, implement **SSL/TLS encryption**, and ensure data compliance with company policies.

Education

- Bachelor of Technology (B.Tech) in Computer Science
Vignan's Foundation for Science, Technology, and Research
Graduated with honors.

Certifications

- **Microsoft Certified: Azure Developer Associate**
- **AWS Certified Solutions Architect – Associate**
- **Certified Kubernetes Administrator (CKA)**
- **Microsoft Certified: Azure Fundamentals**
- **AWS Certified Developer – Associate**
