

Professional Summary:

- Around 9+ years of IT experience in design, development, implementation and testing of Client-Server, Web Applications using Java/J2EE Technologies.
- Experience in SDLC (Software Development Life Cycle) that includes Requirement Analysis, Design, Coding, Testing, Implementation, Maintenance with methodologies like Waterfall Model and Agile Methodologies.
- Experience in design and development of web-based applications using Spring Boot, Spring MVC, Spring Data JPA, Spring AOP, Spring Transactions, Spring Core, Spring JDBC, Spring Security, Spring Batch and Hibernate ORM, Microservices, Jenkins, Docker, Kubernetes, Maven, Git.
- Experience on Core Java Technologies like Multithreading, Collections and Exception handling mechanisms and Generating Runtime Proxies.
- Experience with ORM tool Hibernate involving Connection Pooling, Mappings, Transaction Management, Inheritance Relation Ships and Association Relationships, HQL (Hibernate Query Language), Criteria API.
- Excellent working knowledge in configuring multiple WebLogic domains including machines, manage servers, node managers, and cluster environments.
- Hands on experience with scripting languages like Linux.
- Experience in implementing SOA (Service Oriented Architecture) using Web Services (SOAP, WSDL, Restful, and JAX-WS) and REST Services.
- Experience with using Apache Tomcat Server, Web Logic and Glassfish Server.
- Used Maven scripts for building and deploying the application in Web/App servers.
- Experience with databases like MySQL, Oracle.
- Familiar in deploying applications through Web Sphere server as part of CRUD process.
- Strong debugging and troubleshooting skills.
- Strong Knowledge on Micro Services [Client Side and Server Side Load Balancer, Discovery Client Service, Gateway service, JMS], Apache Kafka, Event Driven Mechanism

Employer Summary:

- Working as a Software Engineer in **TeqLeader Consulting (Pty) Ltd** from Apr 2022 to March 2025.
- Worked as a Lead Engineer in **Infosys** from July 2021 to January 2021.
- Worked as a Lead Engineer in **HCL Technologies** from April 2020 to July 2021.
- Worked as a Software Engineer in **Apollo Computing Laboratories** from Feb 2016 to March 2020.

Technical Skills:

- Java Technologies Java, J2EE, Java Web Services [JAX-WS]
- RESTful, JDBC, JSP, Custom Tags, JSTL, Servlets
- Spring Boot, Spring MVC, Spring Data JPA, Spring Core, Spring JDBC, Spring AOP, Spring Transactions, Spring Batch, Spring Security And MicroServices.
- Application Server Web-logic, Tomcat
- Databases Oracle 10g, MySQL
- Frameworks/API's JPA, Hibernate
- Code Development Tools Eclipse, Spring Tool Suite
- Scripting/Markup Languages HTML, CSS, Java Script
- Documentation Tools MS Word, MS Excel

- Version Controlling tools SVN, Git
- Build Tools Maven, Jenkins
- Writing Testcases using JUnit, Mockito
- Operating Systems Windows, UNIX
- Design Pattern Singleton, Factory, Proxy
- Frameworks Spring, Hibernate
- Methodologies Agile, Scrums
- J2EE Servlet, JSP, JDBC, JAXB, JAX-RS, JAX-WS
- Web Services SOAP, REST
- Docker, Kubernetes

Education:

- Bachelor of Technology from JNTUH, Hyderabad, India.

Domain Knowledge:

- Telecom Domain
- Avionics Domain
- Insurance Domain

Technical Skills:

Languages : Java, SQL, C, C++, LINUX.
Stream : Spring Boot, Spring Framework, Hibernate, SOAP Services, REST API, AWS[ALB-Application Load Balancer, EC2].
RDBMS : Oracle, SQL Server.
Tools : IntelliJ Idea 2021.3.3, Eclipse IDE, Maven, Jenkins
Operating System : Linux, Windows7/10.

PROFESSIONAL EXPERIENCE

Client Name : Discovery

Feb 2023 – Mar 2025

Role : Java Developer

1. Project: SmartComm - Java Based Brokerage Management Application

Description: SmartComm is a Java-based application designed for brokerage management and commission calculations for various insurance and financial products. Responsibilities included thorough manual testing to ensure the functionality, accuracy, and reliability of the application.

Responsibilities:

- Conducted comprehensive user interface testing to ensure ease of navigation and functionality for brokers and administrators.
- Tested commission calculations for multiple product types, verifying accuracy according to specified broker split percentages and product policies.
- Participated in broker management testing, including adding, editing, and removing broker houses, and ensuring data integrity during broker business transfers.
- Tested accreditation processes for brokers, verifying required documents, certifications, and permissions.
- Conducted product and contract management testing, ensuring accurate association of products with broker houses and contracts.
- Participated in integration testing with external systems and databases to verify data consistency and accuracy.
- Conducted security testing to identify and address authentication and authorization vulnerabilities.
- Performed regression testing after each feature or bug fix to maintain existing functionality.
- Ensured accuracy and completeness of user manuals, guides, and help documentation through documentation testing.
- Having good exposure on Git, Maven, and Jenkins and working in agile methodology.
- Having good exposure on design patterns.

Environment: Spring Framework, Spring Data JPA, SQL, REST API, Java Enterprise Application(J2EE), Microservices.

Client Name : MultiChoice

April 2022 – January 2023

Role : Java Developer

2. Project: Refreshed User Interface Application (RUI)

Description: MultiChoice is a South African company that operates DStv, a major satellite television service in Africa and Gotv, a minor service operating in over 9 countries of this area and Show-Max service. MultiChoice was formed out of the subscriber-management branch of the M-Net terrestrial pay television company, and broadcasts the full range of M-Net channels on the DStv service. MultiChoice is owned by the media conglomerate of the same name. One of the subsidiaries of MultiChoice is DStv Now, renamed as DStv App, a service that delivers television transmission to mobile devices such as laptops, smart phones, and notebooks.

Responsibilities:

- Involved in different user stories and developing the widgets based on the client requirements.
- Writing test cases for different for the different user stories.
- Managed dependencies between multiple teams.
- Took understanding of the client environment as well in order to find out the best possible solution.
- Working on the bugs on the priority basis.
- Having good exposure on Gerrit, Maven, and Jenkins and working in agile methodology.
- Having good exposure on design patterns.

Environment: Spring Framework, Spring Data JPA, SQL, REST API, Java FX, MicroServices, Jenkins, Docker, Kubernetes.

Client Name : Comcast

July 2021 – January 2022

Role : Java Developer

3. Project: Testing on WIFI Router Devices

Description: Comcast Corporation is American telecommunications, it is second largest broadcasting and cable television Company in world by revenue and largest pay-tv company, largest cable TV company and largest home internet service provider in United States, and nation's third-largest home telephone service provider.

Responsibilities:

- Involved in different user stories and involved in bug fixing.
- Writing test cases for different cases and monitoring test result in Jenkins.
- Managed dependencies between multiple teams.
- Interacted with the client on regular basis to clarify requirements and solve any dependency if any.
- Took understanding of the client environment as well to find out the best possible solution.

Environment: Spring Framework, Hibernate ORM, Core Java, SQL, C/C++.

Client Name : Cisco

April 2020 – July 2021

Role : Java Developer

3. Project: Cisco Catalyst 3850/3650 Devices

Description: The Cisco Catalyst 3560 Series is a line of fixed-configuration, enterprise-class switches that include IEEE 802.3af and Cisco pre standard Power over Ethernet (PoE) functionality in Fast Ethernet and Gigabit Ethernet configurations. The Cisco Catalyst 3560 is an ideal access layer switch for small enterprise LAN access or branch-office environments, combining both 10/100/1000 and PoE configurations for maximum productivity and investment protection while enabling the deployment of new applications such as IP telephony, wireless access, video surveillance, building management systems, and remote video kiosks. End users can deploy networkwide intelligent services-such as advanced quality of service (QoS), rate limiting, access control lists (ACLs), multicast management, and high-performance IP routing-while maintaining the simplicity of traditional LAN switching.

Responsibilities:

- Involved in different user stories and involved in bug fixing on the priority Basis.
- Managed dependencies between multiple teams.
- Interacted with the client on regular basis to clarify requirements and solve any dependency if any.
- Solving the Bugs, Collecting the logs from server machines and finding the Root Causes for those issues.

Environment: Spring Framework (Spring Core, Spring JDBC, Spring AOP, Spring MVC, Spring Data JPA), REST API, SQL, C++, C.

Client Name : ADA

Feb 2015 – Mar 2020

Role : Software Developer

4. Project: Advanced Portability Avionics System and Integration Tool

Description: The ADVANCED PASIT is a simulation tool for Light Combat Aircraft (LCA). For Machine Computer and Line Replaceable Units (LRU's) to monitor MIL-STD-1553B Data Bus. ADVANCED PASIT provides a dual redundant MIL standards 1553B card for simulating Bus Controller (BC), Remote Terminal (RT) and Monitor Terminal (MT) for the monitoring the MIL-STD-1553B bus data. This system is capable of configuring combinations of BC, 31RT'S and MT at a given time with MIL-STD-1553B USB/PCI card Responsibilities:

- Involved in writing end to end test cases for different user stories and involved in creating RTM matrix.
- The implementation Of BC and MT is done using Collections in Java/C.
- Writing test cases for different test cases and monitoring test result in different formats.
- Managed dependencies between multiple teams.
- Interacted with the client on regular basis to clarify requirements and solve any dependency if any.
- Prepared and executed ATP (Acceptance Test Procedure) for Advanced PASIT and testing setup.
- Took understanding of the client environment as well in order to find out the best possible solution.

Environment: Spring Core, Spring MVC, Spring AOP, Hibernate, SQL, C, C++.
