PROFESSIONAL SUMMARY

Detail-oriented iOS Software Engineer with expert proficiency in Swift and Objective-C. Demonstrated experience in developing high-performance, user-centric iOS applications using advanced iOS frameworks and design patterns. Proven ability to optimize app performance, implement complex features, and collaborate effectively in fast-paced, Agile environments. Passionate about creating excellent user experiences and balancing technical decisions with business needs.

WORK EXPERIENCE

Bouqute By MY

Dec. 2024 – Present

iOS SOFTWARE ENGINEER

- Architected an iOS wedding-florist application using Swift and MVVM, enabling real-time flower recommendations based on seasonal availability, color theory, and budget
- Integrated a retrieval-based AI chat system leveraging OpenAI embeddings (text-embedding-ada-002) and Pinecone, allowing users to query custom floral data and color rules in natural language
- Implemented photo color extraction using Vision framework, matching venue or dress color palettes with recommended flowers
- Developed a translucent, high-end custom tab bar using SwiftUI, reflecting the "Bouquet By MY" luxury brand aesthetic
- Optimized API calls and concurrency with Swift async/await, minimizing latency during chat interactions and data retrieval
- Built secure authentication flows via Keychain and JWT tokens, safeguarding sensitive user data like order details and personal color preferences
- Created modular UI components for quick customization, ensuring a consistent and elegant user experience across iPhone and iPad devices

Mers Farrukh

Jun. 2023 – Present

iOS SOFTWARE ENGINEER

- Architected native iOS application using Swift and MVVM pattern, enabling mobile inventory management for Mercedes parts warehouse
- Developed custom camera interface using AVFoundation for parts photography and documentation
- Integrated barcode scanning functionality using AVFoundation, accelerating parts processing and reducing manual input errors
- Engineered offline-first data persistence using Core Data, allowing warehouse operations without constant internet connectivity
- Implemented custom search algorithms with URLSession, enabling efficient part code retrieval based on year, model, and part categories
- Built responsive UI with UIKit and Auto Layout, ensuring seamless operation across different iPhone models
- Optimized image processing and caching using SDWebImage, reducing data usage and improving app performance
- Integrated secure authentication using Keychain and JWT tokens, protecting sensitive inventory data

CryptoTax/CryptoVote

Jan. 2018 – Present

iOS SOFTWARE ENGINEER

- Architected iOS financial application using Swift and MVVM architecture, implementing real-time cryptocurrency tax calculation and voting features across iPad and iPhone platforms

- Developed comprehensive tax reporting system integrating multiple exchange APIs (Coinbase, Binance), enabling automated transaction tracking and tax liability calculations
- Implemented Core Data persistence layer for offline transaction management, reducing API calls by 40%
- Created modular UI components using UIKit and Auto Layout, enabling seamless cross-device functionality
- Established CI/CD pipeline using Jenkins and Fastlane, reducing deployment time by 60%
- Built comprehensive unit test suite achieving 85% code coverage, identifying and resolving critical financial calculation edge cases

Evolution Networks

Mar. 2018 – Aug. 2018

iOS SOFTWARE ENGINEER

- Architected social goal-tracking iOS application using Swift and MVVM pattern, enabling users to track and share personal achievements
- Developed custom progress tracking UI components using UIKit animations, resulting in engaging visual goal progression
- Implemented real-time social features using Firebase, allowing users to connect and share tips within goal-focused communities
- Engineered offline-first data persistence using Core Data and CloudKit sync, ensuring seamless user experience across devices
- Built dynamic content feed using UICollectionView with custom layouts, supporting rich media sharing and community interactions
- Integrated push notification system for goal reminders and community engagement
- Created modular networking layer supporting multiple APIs, enabling seamless integration of social and tracking features
- Implemented secure user authentication and data privacy controls, ensuring GDPR compliance for EU users

EDUCATION

San Francisco State University

Bachelor of Science, Computer Science

San Francisco, CA

SKILLS

- **Technical skills:** Swift and Objective-C, iOS frameworks (UIKit, Core Data, Core Animation, GCD), iOS SDK, Xcode, and other iOS development tools, SwiftUI and Combine, iOS design patterns (MVC, MVVM, VIPER), RESTful APIs, Nodejs GraphQL, JSON, Multithreading and memory management, Unit tests and UI automation tests, proficient with version control systems (Git, GitHub), CI/CD pipelines and app deployment processes, App performance optimization and debugging techniques.
- **Languages:** Russian, English
