

Amulya Koppanadam

Houston, TX • 6602709183 • amulya.koppanadam@gmail.com

SUMMARY

- A Cloud/DevOps professional with **7 years** of expertise in designing, implementing, and managing cloud solutions across Azure and AWS. Proficient in deploying and maintaining cloud-native services, including compute, storage, networking, security, and databases, while optimizing performance, cost, and scalability.
- Extensive experience in Infrastructure as Code (IaC) and automation using Terraform, Python, PowerShell, and Bash, streamlining infrastructure provisioning, configuration management, and CI/CD pipelines with Azure DevOps, Jenkins, and GitHub Actions.
- Implemented cloud security best practices, managing IAM roles, security policies, VPC security groups, NSGs, and network ACLs to ensure a secure cloud environment while enforcing compliance standards.
- Led the containerization of applications using Docker, orchestrated Kubernetes clusters in Azure Kubernetes Service (AKS) and Amazon EKS, and managed microservices deployment with Helm charts to enhance scalability and reliability.
- Designed and implemented high-availability (HA) and disaster recovery (DR) solutions across multi-region cloud environments, ensuring 99.99% uptime with automated failover strategies.
- Spearheaded cloud cost optimization strategies using Azure Cost Management and AWS Cost Explorer, achieving a 15% reduction in infrastructure expenses through resource right-sizing and usage analysis.
- Implemented comprehensive monitoring and observability solutions using Azure Monitor, AWS CloudWatch, Datadog, New Relic, Prometheus, and Grafana, proactively identifying performance issues and reducing incident response time by 40%.
- Led seamless migrations from on-premises to cloud, ensuring zero data loss and minimal downtime for business-critical applications.
- Experience working in Agile Environment and deep understanding on SDLC Methodologies.
- Professional & pleasant work ethic, self-motivated & eager to lead others.
- Quick learner & very team oriented. Team player with excellent communication skills in listening, talking & writing, developed through various consulting projects.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, Shell Scripting, PowerShell
- **Operating Systems:** Windows, Linux, Mac OS
- **Cloud Platforms:** Microsoft Azure, AWS
- **CI/CD:** Azure DevOps, Jenkins, AWS DevOps and DevSecOps tools
- **Tools:** Terraform, Kubernetes, Docker, Ansible
- **Version Control Tools:** GIT, GitHub, GitLab
- **Monitoring & Logging:** New Relic, Datadog, Prometheus, Grafana, AWS CloudWatch, Log Analytics, Azure Monitor
- **Technical Stack:** Azure Virtual Machines, App Services, Storage, Networking, Active Directory, SQL Database, ARM templates, Azure Key vault, Azure Kubernetes Service (AKS), ACR, EC2, S3, RDS, EKS, ECR, CloudFormation
- **Certifications:** AZ-900, AZ-104, AZ-400, AZ-300, ITIL-v4

WORK EXPERIENCE

Sr. Azure Cloud/DevOps at Genuine Parts Company | Atlanta, GA [May 2024- Current]

- Designed and automated Azure infrastructure provisioning using Terraform-based Infrastructure as Code (IaC) solutions, streamlining resource allocation for Windows/Linux VMs, VNet Peering, and storage solutions, based on user requests in ServiceNow.
- Optimized CI/CD pipelines in Azure DevOps, reducing provisioning time by 50% and deployment failures by 30%.
- Deployed and managed Azure Kubernetes Service (AKS) to run scalable, containerized applications, implementing Helm charts, auto-scaling, and rolling updates, leading to a 30% reduction in infrastructure costs.
- Enhanced server stability by implementing proactive monitoring solutions using Azure Monitoring tools (Azure Log Analytics, Azure Service Health) and third-party platforms like New Relic and Datadog, reducing server crashes by 30%.
- Designed, implemented, and maintained continuous integration and continuous deployment (CI/CD) pipelines to automate the testing, building, and deployment of applications across various environments.
- Implemented Azure Policy and budget alerts to enforce governance and prevent cost overruns, ensuring resource efficiency across multiple environments.
- Implemented configuration management using Ansible, simplifying administration tasks by 30%.
- Implemented Azure Monitor, Log Analytics, and Application Insights to proactively track system performance, reducing mean-time-to-detect (MTTD) issues by 35%.
- Implemented a fully private setup for Azure SQL Servers by configuring private endpoints, NSGs, and firewall rules, ensuring 100% compliance with security policies and eliminating public exposure risks.
- Led and mentored offshore teams to resolve critical issues, streamline workflows, and ensure on-time project delivery, of collaboration and excellence.

AWS Cloud Engineer at Optum | Hyderabad, India [Jan 2022 – Dec 2022]

- Contributed as a Cloud/DevOps Engineer to research and development team to innovate and implement solutions that propelled product advancements.
- Designed, deployed, and maintained AWS infrastructure using services like EC2, S3, VPC, IAM, RDS, Lambda, Route 53, CloudFront, and CloudFormation to optimize performance and scalability.

- Designed and automated AWS infrastructure using Python, Terraform, and CloudFormation, reducing provisioning time by 60% and ensuring infrastructure consistency.
- Developed serverless applications with AWS Lambda, API Gateway, and DynamoDB, cutting operational costs by 40% while enhancing performance.
- Enforced AWS security best practices by managing IAM roles, security groups, VPC NACLs, and KMS encryption, reducing security vulnerabilities by 30%.
- Built CI/CD pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy, enabling zero-downtime deployments and accelerating release cycles by 50%.
- Containerized applications with Docker and Kubernetes (EKS/ECS), improving deployment speed and resource efficiency.
- Integrated AWS CloudWatch, CloudTrail, and Prometheus to proactively monitor system health, reducing incident response time by 35%.
- Implemented AWS cost optimization strategies using Cost Explorer, Budgets, and auto-scaling, reducing cloud spending by 20%.

Azure Cloud/DevOps Engineer at Neudesic | Hyderabad, India

[Mar 2021 – Dec 2021]

- Resolved critical infrastructure issues and automated workflows, enabling business stakeholders to maintain high availability and operational efficiency.
- Delivered cloud solutions for Microsoft at Neudesic, specializing in Azure and AWS migrations, cloud-native development, and infrastructure optimization.
- Designed, Implemented and maintained Azure DevOps pipelines and build processes for UI based and Java Applications, resulting in a 50% reduction in build time and 25% increase in build success rate.
- Implemented disaster recovery and backup strategies in collaboration with security teams, enhancing infrastructure resilience and reducing security incidents by 25% with zero data loss.
- Designed, deployed, and managed REST APIs in Azure Cloud, leveraging Azure API Management (APIM) and App Services for secure and scalable API solutions. Integrated APIs within CI/CD pipelines in Azure DevOps for automated testing, versioning, and deployment.
- Migrated CI/CD pipelines from Azure DevOps to GitHub Actions, automating workflows and improving deployment speed and reliability.
- Developed and automated CI/CD pipelines for Azure Databricks and Data Factory using ARM templates, enabling seamless deployment and integration within Azure DevOps, improving efficiency and reducing deployment time.
- Automated SQL and PostgreSQL database deployments in Azure using Terraform, ensuring consistency, data integrity, and compliance with robust backup strategies.

Azure Cloud Engineer at Capgemini | Hyderabad, India & Amsterdam, Netherlands

[Sep 2016- Mar 2021]

- Served as a key contributor at ABN AMRO Bank, working onsite in the Netherlands for one year, ensuring seamless project execution and fostering strong client relationships to drive successful outcomes.
- Designed and implemented scalable Microsoft Azure architecture for four clients, reducing infrastructure costs by 25% through optimized resource allocation and automation.
- Migrated LAMP stack applications from on-premises to Azure using a lift-and-shift approach, provisioning required Azure services with Terraform templates and automating deployments through Azure DevOps for seamless transition and scalability.
- Automated cloud operations and deployment pipelines using PowerShell and Python scripting, reducing manual intervention and improving system efficiency and reliability.
- Implemented '4 eyes' principles in Azure DevOps pipelines, incorporating approvers and branch strategies to enhance security and workflow transparency.
- Designed and implemented CD pipelines in Azure DevOps to deploy applications across IIS, Tomcat, and Azure Web Apps, ensuring seamless integration and deployment.
- Configured Azure Storage Blobs and Files, set up CDN and custom domains, and managed access control and storage keys to optimize data access and performance.
- Configured Azure Application Gateway to load balancer traffic across multiple regions, distributing load to backend Azure virtual machine servers and App services for High availability and performance.
- Managed SSL certificate renewal and updates in Azure Application Gateway to maintain secure access and ensure uninterrupted service.
- Managed and maintained certificates and secrets in Azure Key Vault to ensure secure access control and compliance with organizational security policies.
- Designed and deployed scalable Azure architectures, reducing costs by 25%, improving server uptime by 30% through proactive monitoring, and enhancing efficiency with automated CI/CD pipelines for web applications and data service.

EDUCATION

- **UNIVERSITY OF CENTRAL MISSOURI/ *Master in Computer Science (2023-2024)***
- **JAWAHARLAL NEHRU INSTITUTE OF TECHNOLOGY HYDERABAD/ *Bachelor of Technology (2012-2016)***
