SKILLS

Python

Node.js

Bootstrap

Redux

Django/ CMS

Flask

NextJS

Typescript

JavaScript

Ruby

WebSocket

Tailwind

React JS

VueJS

Angular

Git

Grafana/Kibana

SciPy

Webpack

NumPy

Artificial Intelligence

PyTorch

TensorFlow

PROFILE

As a seasoned Senior Python Engineer with over 8 years of experience, I bring deep expertise in architecting and delivering high-performance, data-driven applications. I excel at building scalable backend systems, optimizing database operations, and integrating complex third-party services. Proficient in frameworks like Django and Flask, I combine strong technical acumen with a problem-solving mindset to deliver robust, efficient, and maintainable software solutions that drive real business value.

EMPLOYMENT HISTORY

Senior Software Engineer at 47Billion

February 2022 — Present

- Developed and maintained Python-based microservices, leveraging Django and FastAPI for robust, scalable web applications.
- Designed RESTful and asynchronous APIs to facilitate seamless integrations with third-party services, boosting application functionality.
- Implemented real-time communication features using WebSockets and Celery to enhance user collaboration and system responsiveness.
- Optimized PostgreSQL and Redis queries, improving data retrieval and processing speeds by over 30%.
- Utilized Docker and Kubernetes for containerization and orchestration, reducing deployment times and increasing system reliability.
- Championed CI/CD pipelines (GitHub Actions, Jenkins), promoting continuous delivery and accelerating release cycles.
- Ensured code quality through rigorous code reviews, automated testing, and adherence to best practices and security standards.
- Mentored junior engineers, fostering a culture of knowledge sharing and technical excellence.

Software Engineer at Minute7

May 2019 — January 2022

- Architected and optimized backend services in Python to streamline time tracking and expense management solutions.
- Built and refined Django-based modules, enabling efficient data processing and seamless front-end integrations.
- Automated key processes via RESTful APIs and asynchronous tasks, cutting manual overhead and driving operational efficiency. Deployed caching and database indexing strategies, reducing response times by up to 40%.
- Spearheaded code reviews, unit testing, and performance tuning, consistently upholding best-in-class coding standards.
- Collaborated with cross-functional teams (design, product, QA) to incorporate user feedback, iterating rapidly in an agile environment.
- Oversaw implementation of cloud-based services (AWS S3, Lambda, RDS) to ensure high availability, scalability, and secure data storage.
- Provided mentoring on Python best practices and advanced development tools, boosting team productivity and project outcomes.

Software Engineer at HobbyDB

June 2016 — April 2019

FastAPI
MongoDB
Lambda
SQL
AWS
Azure
Terraform
Docker
Kubernetes
GCP
GitHub
CI/CD
DevOps
Jenkins
Microservices
Kafka
RabbitMQ
PySpark
Selenium
Swagger
Gradle
Swagger
Cypress
Pytest
GraphQL
IntelliJ
Microservices
Heroku
ElasticCache
Jenkins
Postman

- Designed and maintained Python-based microservices for an extensive collectibles database, ensuring high performance and scalability.
- Implemented RESTful and GraphQL APIs with Django and FastAPI, streamlining data retrieval for millions of user-generated items.
- Leveraged asynchronous processing with Celery and Redis to handle large-scale operations and real-time updates efficiently.
- Optimized PostgreSQL queries and indexing strategies, reducing search latency and improving user experience.
- Orchestrated Docker and Kubernetes deployments, automating environment setup and speeding up new feature rollouts.
- Established robust CI/CD pipelines (GitHub Actions, Jenkins) to facilitate continuous testing, integration, and delivery.
- Championed best practices in code reviews, testing, and documentation, fostering a culture of technical excellence.
- Collaborated with cross-functional teams (product, UX, QA) to rapidly iterate and enhance the overall platform functionality.

★ PROJECTS

Trainual

Trainual is a knowledge-sharing and training platform that helps businesses systematize their operations.

It centralizes processes, policies, and standard operating procedures, making them easily accessible to teams.

The platform simplifies onboarding, ensuring consistency in training and reducing manual overhead.

By automating routine tasks, Trainual empowers organizations to focus on growth and innovation.

Its intuitive interface and customizable features cater to businesses of all sizes, promoting efficiency and scalability.

Authorea

Authorea is an online platform that revolutionizes scholarly writing and publishing. It enables researchers and authors to collaborate in real time on scientific articles, preprints, and other academic content.

By integrating powerful authoring tools, version control, and easy citation management, Authorea streamlines the publishing workflow.

Its intuitive interface accommodates diverse file formats, allowing for transparent peer review and open access sharing.

Backed by a community of scholars, Authorea promotes knowledge dissemination and accelerates research innovation.

Careviso

Careviso is a healthcare technology company dedicated to streamlining prior authorization and coverage management processes.

Their innovative solutions simplify insurance complexities, helping healthcare providers improve efficiency and reduce administrative burdens.

By automating patient eligibility checks and real-time benefit verification, Careviso enhances both patient access and the overall care journey.

Their platform integrates seamlessly into existing workflows, expediting approvals and minimizing operational bottlenecks.

Backed by a multidisciplinary team, Careviso continues to enhance data transparency, aiming to transform the healthcare experience for providers and patients alike.
