OBJECTIVE

Innovative Gen AI Engineer with a decade of experience in software development, AI model integration, and cloud deployment. Expert in generative AI, deep learning, and ML Ops, I drive transformative, data-driven solutions to enhance enterprise operations. Eager to leverage my skills to catalyze business growth and foster remarkably continuous innovation

PROFILE SUMMARY

- Accomplished Gen AI Engineer with nearly ten years experience, delivering software solutions across telecommunications, healthcare, finance, insurance, and public transportation.
- Expert in integrating generative AI models, deep learning methods, and ML Ops strategies for scalable, secure deployments in enterprise applications.
- Demonstrated proficiency in full-stack development, delivering robust front-end and back-end solutions using modern frameworks, agile methodologies, and secure architectures effectively.
- Expertly skilled in database management and DevOps practices, utilizing SQL, NoSQL systems, CI/CD pipelines, Docker, Kubernetes, and multi-cloud platforms efficiently.
- Proven leadership in managing cross-functional teams, mentoring junior developers, and collaborating effectively to translate business requirements into innovative technical solutions.
- Delivered impactful projects for prominent clients in public transportation, healthcare, financial services, and technology, consistently exceeding performance and quality expectations.
- Demonstrated expertise in Python, Java, JavaScript, React, Angular, Node.js, TensorFlow, PyTorch, and additional machine learning libraries, ensuring optimal performance consistently.

TECHNICAL KNOWLEDGE

IDE Tools : Visual Studio Code (VS Code), IntelliJ IDEA, Eclipse, Atom, IntelliJ, Sublime Text, Jupyter Notebook

Languages: Python, Java, NodeJS

Machine Learning: TensorFlow, Py torch, Scikit-learn, Keras, NumPy, Pandas, XGBoost, Light GBM, OpenCV, YOLO, MLLib,

Artificial Intelligence: Hugging Face Transformers, OpenAI, Lang Chain, Google Gemini, Hugging Face Models, Llama

Vector Database: Pinecone, Chromo DB, Cosom DB, Faiss, Color, OpenSearch, Milvus, Elastic Search

Big Data: Hadoop, Apache Spark, Apache Kafka, Apache Hive, Google Big Query, Data Lake, Apache Flink

ETL Tools : Databricks, Snowflake, Azure Data Factory, AWS, Glue, Informatica, Apache Airflow

Operating Systems: MacOS, Windows, Linux

Web Development & Frameworks: HTML5, CSS, Java Script, Django, React, Angular, Express.js, Spring, Flask, Fast API, Bootstrap

Databases: PL/SQL(Oracle), MySQL, NoSQL, MongoDB, Graph QL

Cloud Servers: GCP, AWS, AZURE, Apache Tomcat, HTTP Web Server, Nginx

Logging and Data Analytics Version Control Systems: Prometheus, Grafana, Datadog, ELK, Git, Bit Bucket, GitLab

Container Tools & Infrastructure Tools: Docker, Kubernetes, ACS, AKS, EKS, Terraform, Ansible

WORK EXPERIENCE

Gen AI Engineer

Techforce services/Nsw Public support

Oct'23 to Present

- Collect and store parking and traffic ticket data from APIs, PDFs, images, and databases efficiently.
- Process ticket data using OCR, vectorization, and embeddings for structured retrieval and legal analysis.
- Train LLMs with RAG to generate insights, predict fines, and recommend dispute resolutions accurately.
- Develop APIs with Flask, integrating GKE for scalable model deployment.
- Build a React-based dashboard for users to upload tickets, check fines, and receive AI recommendations.
- Deploy on GKE implementing monitoring with Prometheus, and Grafana for reliability.

MachineLearning Engineer
Techforce services/Salesforce

May'22 - Sep'23

- Design and implement machine learning models within Salesforce for predictive analytics and automation tasks.
- Integrate AI-driven insights into Salesforce CRM to enhance customer engagement and sales forecasting accuracy.
- Develop data pipelines to process and analyze large datasets for actionable business intelligence solutions.
- Optimize Salesforce Einstein models for lead scoring, sentiment analysis, and personalized marketing recommendations.
- Collaborate with stakeholders to align machine learning strategies with business objectives and customer needs.
- Monitor model performance, retrain algorithms, and ensure compliance with data governance and security standards

MachineLearning Engineer
TCS/USAA

Aug'21 - Feb'22

- Collect customer data from transactional and behavioral sources using Apache Spark, ensuring scalable data ingestion and feature extraction processes.
- Segment customers with K-Means clustering using Python and scikit-learn, analyzing demographic patterns for deeper insights into customer behavior.
- Train predictive models using Random Forests or XGBoost in Python to forecast customer churn and recommend personalized product offerings.
- Containerize and deploy machine learning models with Flask and Docker for real-time customer insights integration within USAA's internal systems.
- Implement CI/CD pipelines with Jenkins and deploy models on Kubernetes, enabling continuous training, monitoring, and seamless production deployment.
- Visualize customer insights using Tableau or Power BI, presenting machine learning predictions to business teams for strategic decision-making in real-time.

Data Analyst
Cepheid INC

Feb'20-May'21

- Collect diagnostic test data using SQL queries and Python (Pandas) from multiple sources, ensuring high data accuracy and consistency.
- Perform data analysis and exploratory data analysis (EDA) with Python (Seaborn, Matplotlib) to identify trends, correlations, and anomalies.
- Conduct statistical tests like T-tests or chi-squared tests using Python (SciPy, statsmodels) to validate test performance and optimization.
- Implement predictive models using Random Forest or XG Boost in Python to forecast test outcomes and optimize diagnostic efficiency.
- Generate visual reports and dashboards in Tableau or Power BI to deliver insights on diagnostic test performance to stakeholders.
- Automate reporting workflows using Python (Jupyter Notebook) and schedule regular reports for management and operations teams.

AngularJS Developer, Sunnyvale, CA
AT&T

May'17-Dec'19

- Develop the frontend using AngularJS for interactive features and smooth client-side routing.
- Implement strong security measures including authentication, authorization, and encryption, to protect user data and ensure compliance. Build backend services with Java, using RESTful APIs, and MySQL for efficient data management in microservices architecture.
- Write unit and integration tests, and configure GitLab CI/CD pipelines to automate testing, building, and deployment.
- Deploy the application, monitor performance, and gather feedback for continuous improvements in production.
- Set up a GitLab repository for version control and project organization, ensuring clarity and collaboration.

Java backend developer, St. Louis, Missouri
Daugherty Business Solutions

Jan'16- Mar'17

- Develop a responsive user interface with HTML, CSS, and Bootstrap, ensuring client-side interactions for a user-friendly experience.
- Build backend services with Java, implementing RESTful APIs and business logic for internet service management.
- Configure MySQL database, design schemas, and break down the application into microservices for scalability and modularity.
- Develop microservices for specific functionalities like network optimization and integrate frontend, backend, and database components.
- Write unit and integration tests and set up GitLab CI/CD pipelines for automated testing, building, and deployment.
- Deploy microservices to production, monitor performance, and optimize based on usage metrics for continuous improvement.

JavaScript Developer, Mumbai
Lyse info Global Solutions Pvt Ltd

July'13-April'14

- Develop responsive, user-friendly websites using HTML CSS and JavaScript, incorporating modern frameworks like React
- Collaborate with UX designers to implement intuitive interfaces and write clean, reusable code following best practices.
- Troubleshoot, debug, and optimize performance by reducing load times and file sizes for better user experience.
- Test functionality across devices and browsers, ensuring compatibility and meeting user requirements.
- Use Git for version control and collaborate effectively with other developers on code changes.
- Stay updated with web technologies and continuously integrate new features into web applications.

EDUCATION

- Masters of Science in Computer Science, SFBU
- Bachelor from GIITS in ECE
