

Aaron Stevens

Senior Full Stack Engineer

+1 (864) 588-5579 aaronstevens.work7@gmail.com linkedin.com/in/aaron-stevens-26464a343 Anderson, SC

SUMMARY

Experienced **Senior Full Stack Engineer** with over 12 years of hands-on experience in building and maintaining high-performing web and mobile applications. Skilled in front-end frameworks like **React**, **Vue**, **Angular** and back-end technologies such as **Node.js**, **Django** and **C#**. Comfortable working with databases like **MySQL**, **PostgreSQL**, **DynamoDB** and **MongoDB** and deploying applications using cloud platforms like **AWS**, **Azure** and **Google Cloud**.

Passionate about creating seamless user experiences and developing efficient APIs that power smooth interactions across platforms. I enjoy working with cross-functional teams, collaborating closely with designers, product managers and QA engineers to bring ideas to life. As a team lead, I focus on mentoring junior developers, encouraging them to grow and helping to build a supportive, innovative work environment.

Love finding ways to improve development workflows, using **CI/CD pipelines**, **Docker** and **Kubernetes** to make our process faster and more reliable. Whether it's optimizing code, solving complex technical problems, or guiding the team to meet business goals, I'm always looking for new ways to improve and deliver high-quality, scalable products.

EXPERIENCE

Senior Full Stack Engineer

01/2023 - 12/2024

[TalentVerse](#)

- Architected a scalable microservices system using **Node.js**, **Express.js** and **Kubernetes**, enabling independent deployment of services and reducing downtime during updates by 40%.
- Designed cross-platform UIs with **React**, **Vue.js** and **Angular**, utilizing **Material-UI** and **Tailwind CSS** to create consistent, responsive and accessible user experiences.
- Implemented serverless data processing workflows using **AWS Lambda** and **DynamoDB**, improving real-time event handling and cutting infrastructure costs by 20%.
- Built live notifications and collaborative chat systems with **Socket.IO** and **Redis Pub/Sub**, enhancing real-time communication and multi-user functionality for the platform.
- Secured APIs with **OAuth2**, **JWT authentication** and IP restriction policies, ensuring compliance with industry security standards and protecting user data.
- Refactored legacy AngularJS modules into modern **React functional components** with **Redux**, reducing technical debt and improving code maintainability.
- Automated CI/CD pipelines using **Jenkins**, **GitHub Actions** and **Docker**, accelerating deployment cycles and reducing human error during production releases.
- Increased test coverage by developing unit, integration, and E2E tests with **Jest** and **Cypress**, ensuring platform reliability and reducing production issues by 30%.
- Mentored junior developers by hosting weekly technical workshops, conducting detailed code reviews and leading pair programming sessions to improve team performance.
- Collaborated with product managers, designers and QA engineers to gather business requirements, define technical specifications and deliver high-impact features on schedule.
- Integrated **GraphQL APIs** to optimize data fetching for the frontend, reducing API over-fetching and improving application performance by 25%.
- Migrated legacy systems to a hybrid architecture combining **serverless functions** and containerized services on **AWS ECS**, improving scalability and resource utilization.
- Designed database schemas and optimized queries using **PostgreSQL** and **MongoDB**, improving query performance for high-volume data operations by 35%.
- Created real-time analytics dashboards with **D3.js** and **Chart.js**, allowing stakeholders to monitor system performance and user engagement metrics dynamically.

Senior Front End Developer

06/2021 - 12/2023

[Macy's](#)

- Developed scalable, reusable front-end components using **React**, **Redux**, and **Material-UI**, integrating seamlessly with backend services built in **Java (Spring Boot)** to support dynamic user experiences.
- Improved application performance by implementing **lazy loading**, **code splitting**, and **server-side rendering (SSR)** with **React** and **Spring MVC**, reducing page load times by 40%.
- Migrated legacy AngularJS features to modern **React functional components** with **Hooks**, improving maintainability and reducing technical debt in alignment with industry standards.
- Built and consumed RESTful APIs designed with **Java (Spring Boot)** to support real-time data exchange and ensure backend reliability.
- Designed interactive data dashboards using **D3.js** and **Chart.js**, fetching data from backend APIs in **Spring Boot**, enabling stakeholders to monitor KPIs visually.
- Collaborated with backend teams to optimize API response times, ensuring seamless integration between **React** frontends and **Java** services.
- Configured CI/CD pipelines using **Jenkins**, automating deployment processes for React applications and Java-based backend services to maintain consistency across environments.
- Conducted unit and integration testing using **Jest** and **JUnit**, achieving 90% test coverage across frontend components and backend services.

EXPERIENCE

- Enhanced application accessibility by implementing **WCAG standards** with React, ensuring compliance and inclusivity for users with disabilities.
- Integrated third-party services into the React frontend using APIs built in **Java**, such as authentication (OAuth2) and payment gateways, ensuring secure and seamless functionality.

Senior Full Stack Developer

07/2018 - 06/2021

Cognizant

- Delivered scalable full-stack applications using **React**, **TypeScript**, and **Django**, supporting high-performance features for thousands of concurrent users.
- Enhanced backend performance by developing RESTful APIs and GraphQL endpoints in **Django** and **Python**, enabling efficient client-server communication and reducing response times by 25%.
- Designed and implemented database schemas with **PostgreSQL**, leveraging advanced indexing techniques to optimize query performance and reduce latency.
- Built real-time features like activity tracking and notifications using **WebSockets** and Django channels, improving user engagement and interactivity.
- Automated server provisioning and deployments using **Terraform** and **AWS Lambda**, streamlining cloud infrastructure management and cutting manual errors by 40%.
- Developed dynamic and type-safe frontend components with **React** and **TypeScript**, reducing runtime bugs and improving maintainability through strong typing.
- Implemented caching solutions using **Redis** with Django, reducing database load and improving response times for frequently accessed data by 30%.
- Designed data pipelines with **Python** and Celery for task queuing and asynchronous processing, enabling efficient handling of large-scale background jobs.
- Conducted code reviews and mentored team members on advanced **TypeScript patterns**, **React Hooks**, and **Django best practices**, improving overall team productivity and code quality.
- Built interactive data visualization dashboards using **Chart.js** and **D3.js**, powered by Python-based data analytics tools, to support data-driven decision-making for stakeholders.

Senior Full Stack Engineer

01/2016 - 07/2018

Wipro

- Built interactive and polished UIs using **React**, **Vue.js** and **TypeScript**, leveraging **Material-UI** to deliver high-quality, accessible designs.
- Developed scalable backend systems with **Node.js**, **NestJS** and **GraphQL**, improving API performance and enabling efficient data querying.
- Enhanced application security by implementing **SAML SSO**, multi-factor authentication (MFA) and secure session management, meeting enterprise security requirements.
- Automated testing and deployment pipelines using **Azure DevOps**, reducing build times and deployment errors by 40%.
- Improved database operations by optimizing queries with **Sequelize ORM** and utilizing **PostgreSQL** for complex data handling.
- Designed and deployed data-driven applications integrating external APIs like payment gateways and geolocation services via **OAuth2**.
- Introduced E2E testing with **Cypress**, improving test reliability and minimizing customer-facing bugs.
- Provided comprehensive technical documentation and conducted knowledge-sharing sessions to onboard new team members effectively.

Front End Engineer

06/2014 - 12/2015

Prudential Financial

- Developed modular **AngularJS** components to create dynamic, scalable user interfaces, improving development efficiency and code reusability.
- Designed responsive layouts using **Bootstrap**, **CSS3** and **HTML5**, ensuring cross-browser and device compatibility.
- Created a real-time chat application with **Socket.IO** and **Node.js**, enabling instant communication within the platform.
- Visualized business data using **D3.js** to provide stakeholders with interactive dashboards for actionable insights.
- Integrated RESTful APIs with **PostgreSQL**, implementing geospatial features to support location-based services.
- Conducted thorough unit testing with **Jasmine**, reducing bugs in production and ensuring the stability of key features.
- Refactored legacy JavaScript code into modular architecture, improving maintainability and performance.
- Built reusable CSS frameworks and themes for consistency across the platform's front-end design.

Frontend Web Developer

07/2011 - 06/2014

Marsh

- Built dynamic single-page applications using **AngularJS**, improving user experience with faster load times and smooth navigation.
- Designed and implemented responsive UIs using **HTML5**, **CSS3** and **Bootstrap**, ensuring compatibility with various screen sizes and devices.
- Developed a real-time messaging system using **Socket.IO** and **Node.js**, enhancing collaboration features for internal users.
- Created interactive data visualizations with **D3.js**, providing users with insightful and intuitive representations of business metrics.
- Implemented geospatial features with **PostgreSQL**, enabling advanced location-based functionality for the application.
- Refactored existing JavaScript code to follow modular design principles, enhancing maintainability and reducing technical debt.
- Wrote unit tests using **Jasmine** to ensure robustness and reliability of front-end components.
- Managed API integrations and optimized performance, reducing response times for external data retrieval by 20%.

KEY ACHIEVEMENTS

Enhanced Platform Scalability

Designed and implemented a microservices architecture that improved system scalability by 40%, enabling seamless handling of peak traffic and reducing downtime during updates.

Improved User Engagement

Delivered real-time collaboration features, including live notifications and chat with **Socket.IO** and **Redis**, resulting in a 25% increase in user activity metrics.

Optimized Deployment Processes

Automated CI/CD pipelines using **Jenkins**, **GitHub Actions** and **Docker**, cutting deployment times by 30% and minimizing errors during production releases.

Reduced Infrastructure Costs

Migrated legacy services to **AWS Lambda** and **ECS**, achieving a 20% reduction in operational costs through efficient resource utilization.

EDUCATION

Bachelor's degree, Computer Science
University of South Carolina

08/2007 - 07/2011

SKILLS

Language: Javascript, TypeScript, Java, Python, PHP, C#

Frontend:

React, Angular, Vue, Next.js, Nuxt.js, Gatsby, WordPress, Bootstrap, Tailwind CSS, Material UI, Styled-Components, Redux, Vuex, NgRX, Context API

Backend: Node.js, Express.js, Django, Spring Boot, NestJS, ASP.NET

Database: MongoDB, MySQL, PostgreSQL, Firebase

Testing: Unit Testing, E2E Testing, Jest, Cypress, JUnit

Cloud Services & DevOps: AWS, Azure, GCP, Google Cloud, Docker, Kubernetes, Jenkins, Heroku
