SUMMARY

Site Reliability Engineer with proven expertise in architecting resilient cloud infrastructure, pioneering large-scale AWS migrations, and elevating system reliability to 99.99% uptime across mission-critical applications. RHCSA, who decreased response times by 75% through advanced monitoring solutions, combining deep Linux expertise with modern SRE principles to build self-healing infrastructure at scale

KEY ACHIEVEMENTS

Patching Compliance Achieved

Achieved 100% compliance through automated patching, reducing manual tasks by 80%.

Kubernetes Deployment Success

Deployed 15+ apps using Kubernetes, cutting downtime by 85% with strategic updates.

Relocate ("Hypervisor-Level Lift and Shift")

Migrated 150+ virtual machines to AWS using a hypervisor-level lift-and-shift approach, reducing on-premises infrastructure costs by 25% and improving system scalability.

Seamless Server Migrations

Executed 250+ Linux server migrations maintaining 100% uptime, leading zero disruption.

EXPERIENCE

01/2023 - Present

Atlanta, GA

Site Reliability Engineer

Equifax

- Developed 10+ Terraform templates to provision AWS infrastructure, decreasing cloud provisioning time from days to minutes and cutting deployment errors by 85%.
- Minimized failure by running smoke tests using Cypress, increasing deployment reliability by 40%.
- Led monthly patching for 600+ servers with 99.9% success rate, minimizing security vulnerabilities.
- Deployed 15+ applications in the Kubernetes cluster, implementing Rolling Update and Blue-Green deployment strategies that lowered downtime by 85%.
- Designed and implemented automated patching solutions using Red Hat Satellite Server, ensuring 100% compliance with security updates, and lessened manual interventions by 80%.
- Orchestrated deployment of 50+ containers across 9 Kubernetes nodes, improving resource utilization by 40%.
- Developed and maintained over 20 automation scripts using Bash and Python, leading to a 30% reduction in manual intervention and enhancing operational efficiency across multiple projects.

09/2019 - 01/2023

Seattle, WA

Systems Engineer

DoorDash

- Managed installation, configuration, and maintenance of 300+ Red Hat Linux and Oracle Enterprise Linux/UNIX systems, increasing system reliability by 98%.
- Ensured monthly patching for 300+ servers with 99.8% success rate, minimizing security vulnerabilities.
- Supported database operations and resolved 100+ performance issues, ensuring 99.9% uptime for mission-critical systems serving 500+ users.
- Led the migration of over 250 Linux servers across development, testing, and production environments with minimal downtime.
- Successfully executed RHEL 7 to RHEL 8 migrations, finishing two weeks ahead of schedule.
- Administered and optimized over 500 Linux servers, maintaining 99.99% uptime through monitoring and automated alerts.
- Architected and deployed high-availability infrastructure using VMware vSphere and vSAN, supporting over 500 virtual machines with 99.99% uptime and reducing hardware costs by 30%.

03/2016 - 09/2019

Brooklyn, NY

System Administrator

Rite Aid

- Led monthly patching for 300+ servers with 99.8% success rate, minimizing security vulnerabilities.
- Configured and managed Red Hat Satellite Server for patch management across 100+ systems, reducing update time by 70%.
- Collaborated with 3 cross-functional teams to execute migration with zero downtime, preserving 100% service availability.
- Deployed 40+ physical and virtual servers using Kickstart/Templates, reducing build time from days to hours.
- Resolved 200+ networking issues related to TCP/IP, DHCP, DNS, NFS, and Samba, decreasing ticket resolution time by 45%.
- Managed user accounts and security for 300+ users, maintaining zero security breaches.
- Optimized file system performance using LVM, NAS and SAN tools, improving data access speeds by 60%.

EDUCATION

06/2010 - 06/2010 • Bachelor of Science, Microbiology
Guinea University N'zerekore
