

Abhinav

Senior Java Developer

abhinav@vinsumsoft.us | +1 (434)-213-0052 | Work Authorization: H1B

PROFESSIONAL SUMMARY

- Over 9+ years of extensive IT experience in developing, design, analysis, testing of various web based, SOA based and client/server applications in multi-platform environments with JAVA/J2EE technologies, Involved in all phases of Software Development Life Cycle (SDLC).
- Well versed in using software development methodologies like Water Fall, Agile (SCRUM), Test Driven Development and Service orientation architecture.
- Highly proficient in using OOPS for building n-tier architecture systems with hands-on development expertise in front-end UI layer, application layer including middleware, core business frameworks and Back-end database layer integration.
- Experience in Front-End UI development skills using scripting languages like HTML5, DHTML, CSS, JavaScript, jQuery, JSON, AJAX, Node JS, Angular, Backbone JS, Bootstrap, Tag Libraries, JSTL.
- Experienced in managing and securing privileged accounts PAM, implementing least-privilege principles, and establishing strict access controls for sensitive AWS resources.
- Expertise in implementation of Core concepts of Java, J2EE Technologies: JSP, JTS, Servlets, JSF, JSTL, EJB transaction implementation, JMS, Struts, Spring, Swing, Hibernate, Java Beans, JDBC, XML, Web Services, JNDI, Swing, Serialization and Externalization.
- Experience in design and development of robust and highly scalable web service platforms and API's based on REST and SOAP for applications using AXIS, WSDL, UDDI, XML, JAX-WS, JAX-RS, JAXB, JAX-RPC technologies and Jersey frameworks.
- Extensive experience in developing, testing and implementing of application software using Java (EJB, Servlets, JSP, ASP, JMS, Smart Mapper, Java Beans, JDBC, Java Applets, Oracle Apps, AWT, JFC Swing, Java Script, and C++).
- Experience in developing web applications on MVC based frameworks like Spring, Spring IOC, Spring Security, Spring Boot, Spring Batch and Spring MVC.
- Experience using databases such as MySQL, Postgres, Oracle DB.
- Refactored existing monolithic applications by identifying components that needed to be transformed to Microservices architecture, with Spring Boot-based services interacting through a combination of REST, AWS, and API-Gateway.
- Expert in Core Java with strong understanding of Garbage Collector, SWING, Collections, Multithreading, Event handling, Exception handling and Generics
- Expertise in Back-end/server-side java technologies such as: Web services, Java persistence API (JPA), Java Messaging Service (JMS), Java Database Connectivity (JDBC), Java Naming and Directory Interface (JND)
- Expertise in open source framework Object Relational Mapping (ORM) tools like Hibernate and also used Hibernate Annotations to reduce time at the configuration level
- Well experienced in Core Java – asynchronous programming, multithreading, collections and a few design patterns.

- Expertise in databases such as Oracle, MySQL, SQL Server, NoSQL, Mongo DB and IBM DB2 databases to manage tables, views, indexes, sequences, stored procedures, functions, triggers and packages.
- Experience using J2EE design patterns like Composite View, Value Object, Singleton, Factory, Prototype, Business Delegate, Session Façade Pattern, Service locator, Visitor, Observer, Decorator, Front Controller, DAO, MVC, Abstract Factory and Factory Pattern for reusing most efficient and effective strategies for new development.
- Experience in AWS Cloud Environment (EC2, S3, VPC, Lambda, ELB, EBS, ROUTE53, Auto Scaling, Cloud Watch, CloudFront, Amazon RDS).
- Used AWS Aurora for relational database and performance metrics, such as query throughput and latency. It provides fast database cloning and creates copies of the databases.
- Experience in GCP storage services like Google Cloud Storage, Cloud SQL, Cloud Bigtable.
- Good Experience in GCP Bigdata services like Big Query, Google cloud datastore, Google cloud Dataproc.
- Proficient in designing decision tables, rule flows, and integration of BRMS with enterprise systems.
- Implemented BRMS to automate decision-making processes for loan approvals, reducing manual effort by 40% and increasing processing speed by 30%.
- Developed and managed business rules using IBM ODM to streamline workflow automation.
- Helped the team in designing, testing, and maintaining business rules in Drools to align with compliance and regulatory changes.
- Reduced processing time by 25% by optimizing business rules in the claims processing system, improving customer response times.
- Used React Router for creating routes in the application
- Expertise in XML technologies such as DTD, XSL, XSLT, XML schemas, XPath, XForms, XSL-FO and parsers like SAX, DOM.
- Good experience working in Liferay MVC Portlets for building Websites, Intranets, collaborative environments, Mobile Apps.
- Strong experience in different IDEs like RAD, Eclipse, Spring Tool Suite and IntelliJ IDEA and worked on various application and web servers like JBoss, BES Web Logic, IBM Web Sphere, Glassfish, Camel and Apache Tomcat
- Experience with containerization and clustering technologies like Docker, Mesos, Docker Swarm and Kubernetes.
- Having experience with Cloud Computing environment like Amazon Web Services (AWS)
- Good knowledge on building applications using ANT and Maven.
- Experience with Selenium, JUnit, Mockito, Log4j in developing test cases and determining application functionality.
- Experience in development, deployment and troubleshooting Web based and enterprise-based applications on Windows, UNIX and Linux platforms.
- Experience in using code repository tools - Tortoise SVN, GitHub, and Visual Source Safe
- Strong communication and analytical skills and a demonstrated ability to handle multiple tasks as well as work independently or in a team.

TECHNICAL SKILLS

- **Languages:** Java 1.8, SQL, PL/SQL
- **Enterprise Java:** JSP, Servlet2.x, EJB, JNDI, JMS, JDBC, JPA, MDB,
- **Web Technologies:** HTML, CSS, JavaScript, AJAX, jQuery, Node.js, Angular JS, Angular2/4/6/8, React JS
- **Development Tools:** Eclipse, My Eclipse, NetBeans IDE
- **Web/App Servers:** Apache Tomcat, WebLogic, JBoss, IBM WebSphere
- **Databases:** Oracle 10g/11g/12c, SQL Server, MS SQL, Mongo DB, MySQL, and PL/SQL Procedures, Cassandra
- **Web Service Framework:** Apache Axis, Sun Jersey, and Apache CXF
- **Version Control Tools:** CVS, SVN, GIT
- **Operating Systems:** UNIX, Linux, Windows
- **Tools & Framework:** Struts, Spring, Spring Boot, Hibernate, JPA, Spring MVC, Spring Boot, Log4j, Junit, SOAP UI, Gradle, Apache Ant and Apache Maven, Apache Camel, TDD
- **Design Patterns:** MVC, Front Controller, Singleton, Business Delegate and DAO Patterns
- **Web Service Protocols:** SOAP, REST, JAX-RPC, JAX-WS, JAXB, WSDL and UDDI
- **AWS:** IAM, EC2, S3, Elastic beanstalk
- **DevOps Tools:** Jenkins, Docker, Kubernetes
- **Cloud Technologies:** AWS, Azure, GCP

EXPERIENCE

Client: Deloitte/ State of Illinois, Mechanicsburg, PA

Nov 2023 – present

Role: Senior Java Developer

Responsibilities:

- Involved in creating web applications utilizing Spring, Spring Data JPA, Spring JDBC used HTML5, CSS3, JavaScript, JSP, JQUERY, Angular 13, AJAX and Bootstrap.
- Involved in analysis and design phases of Software Development Life Cycle (SDLC) and developed the functionalities using Agile and Scrum methodology.
- Analysed business requirements to translate functional requirements into technical requirements and develop web applications using Mongo DB, Express, React.js/Redux and Node.js (MERN stack).
- Developed multi cloud strategies in better using GCP (for its PAAS) and Azure (for its SAAS).
- Build data pipelines in airflow in GCP for ETL related jobs using different airflow operators.
- Leveraged cloud and GPU computing technologies for automated machine learning and analytics pipelines, such as AWS, GCP.
- Implemented React JS with Redux architecture for fetching asynchronous data from the Restful Web services.
- Used TOAD, PL/SQL developer tools for faster application design and developments.
- Experience includes coding Interface Programs using PL/SQL procedures to load data into the interface tables from legacy systems.
- Maintained Interface compatibility and concurrency in the project using Java8 new features like Lamda Expressions, functional interfaces, default, static methods and Concurrency API.
- Used Java script and struts validation framework for performing front end validations

- Used struts tag libraries like HTML, bean, and logic in the JSP pages. Used html form tag for auto-populating of related Action Form as specified in the action mapping.
- Developed internationalized JSP pages using resource bundles, Struts framework for the presentation tier and flow control.
- Wrote Action and Form class as per struts environment and maintained struts-config
- Created single page web application by creating templates with HTML5(for pages), CSS3(styling), Bootstrap (speed development, responsive, consistency), ES6 and responsive components by using event binding and routing services for great user experience with Angular
- Developed Microservices using Spring Boot, Spring Cloud with Netflix Eureka to create the discovery Server, service, discovery clients and integrated Apache Kafka and Zookeeper as a message broker.
- Used Spring Boot which is radically faster in building cloud Microservices and developing a Spring-based application with very less configuration.
- Used Spring Boot framework to write Presentation Layer, Business Layers and Controller Servlets.
- Implemented data-binding and MVC using Angular2 for front-end development of a current web application.
- Enhanced user experience by designing new web features using MVC Frameworks Angular and ReactJS.
- Used Spring Boot Actuator to externalize application configuration properties for different environments.
- Designed and developed custom message adapter components using Apache Kafka that allowed the message to travel through Microservices to base on Restful API utilizing Spring Boot with Spring MVC.
- Build a prototype for various required services such as Scheduling, Logging and Notification Service using third-party Node JS based JavaScript library.
- Utilized various JavaScript and jQuery libraries, AJAX for form validation and other interactive features.
- Utilized Swagger framework for design, documentation, testing, and deployment of REST APIs in Spring Boot.
- Used Apache camel to define routing and mediation rules in various domain specific Used Hibernate for Object Relational Mapping (ORM) to interact with the Oracle database.
- Installed, configured, and administration of No SQL database clusters in AWS Virtual Private Cloud Network. Created architecture stack for data access with No SQL database Mongo DB.
- Unstructured data was handled using Mongo DB and used Mongoose Connector for connecting to the database.
- Maintained log delivery system by creating a producer, consumer and broker architecture using Apache Kafka.
- Worked on the ELK (Elastic Search, Log stash, Kibana) stack to facilitate information processing and sharing.
- Skilled in java production support for maintaining, troubleshooting, and optimizing Java-based applications in production environments, with a focus on ensuring high availability and minimal downtime.
- Provided production support for Java-based applications, addressing issues in real-time to ensure application stability and uninterrupted user experience.

- Provided production support for databases, ensuring high availability, performance, and data integrity across multiple environments.
- Monitored and optimized database performance, using tools like SQL Profiler, Oracle Enterprise Manager, or MongoDB Atlas, identifying and resolving slow queries and resource bottlenecks for database production support.
- Conducted routine maintenance tasks, including backups, restores, index optimization, and partitioning, reducing database response times and improving overall efficiency as a part of database production support.
- Developed AWS cloud formation templates and set up Auto scaling for EC2 instances and involved in the automated provisioning of AWS cloud environment using Jenkins and Chef.
- Designed, built, and deployed a multitude of applications utilizing the Amazon Web Services stack (Including EC2, S3 SQS) focusing on high-availability, fault tolerance, and auto- scaling.
- Developed a third-party API with OAuth 2.0 authentication and used as a gateway for all the web services.
- Monitored production environments using WCNP and Splunk, with experience in Docker for auto-scaling and continuous integration.

Environment: Java 1.8, AJAX, Maven, Java, HTML5, CSS3, Bootstrap, Angular, Microservices, Type Script, REACT JS, ES6, Jasmine, Karma, Mocha, Chai, Spring Boot, Node.js, Express JS, Hibernate, Mongo DB, Apache Kafka, ELK, Docker, AWS, EC2, Jenkins, Swagger, OAuth 2.0.

Client: Quest Diagnostics, Secaucus, NJ

Dec 2022 – Oct 2023

Role: Senior Java Developer

Responsibilities:

- Involved in design and development of all modules in the application.
- Worked on Agile Methodology and built the application using Test Driven Development approach
- Web designing & development using HTML5, CSS3, JavaScript, React.JS and Ajax.
- Developed React.JS pages, Web services calls, and AJAX calls for the application.
- Used React.JS in components like JSX, creating React components, Virtual.
- Developed Node Scripts and implemented updates to various Node Packages as needed for the project.
- Used HTTP Client Module to send HTTP Requests (GET, PUT, POST, and DELETE) to the backend.
- Implemented Business Delegate, Session Facade, DAO, Singleton, Factory and DTO Design Patterns.
- Improved the performance of the backend batch processes using Multithreading and concurrent package API.
- Used Java 1.8 features such as Lambda Expressions.
- Implemented server-side components using Core Java, multi-threading, web services with Spring Framework.
- Developed Microservices with Spring Eureka to retrieve API routes for the entire cluster.
- Using this strategy each Microservice in a cluster can be load balanced and exposed through one API gateway.
- Used Microservice architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers.

- Involved in the configuration of Spring, Spring Cloud, Micro Services Framework and Hibernate mapping.
- Used Spring Dependency Injection, Annotations and Spring Boot components to implement the business layer and navigation part of application.
- Extensively used Spring Framework modules Spring Data and AOP
- Used Spring Annotations for Spring DI & Spring MVC for REST APIs & Spring Boot for micro-services.
- Developed back-end functionality using Spring Boot and Spring JPA.
- Involved in implementing plugins for Windows 10 and Windows 8.1 using Visual Studio.
- Involved in design and development of all modules in the application.
- Used Log4j and commons-logging frameworks for logging the application flow.
- Deployed and Monitored Micro Services Using Spring Cloud Foundry Managed Domains and routes with the Spring Cloud Service Registry.
- Investigated, diagnosed, and resolved production incidents, working closely with development and operations teams to implement fixes and enhancements as a part of production support.
- Conducted root cause analysis for recurring issues, implementing preventive measures to reduce incident frequency and improve application performance for production support and Utilized monitoring tools and log analysis (e.g., Splunk, ELK) to proactively identify potential issues, reducing downtime and improving system reliability.
- Worked on Amazon Web Services such as S3 (For front-end deployment and images storage) and Elastic Beanstalk (For server deployment).
- Implemented and managed AWS IAM roles, policies, and groups to enforce least-privilege access, enhancing security and compliance.
- Conducted regular audits of IAM policies, identifying and resolving overly permissive authorisations to maintain a secure cloud environment.
- Configured federated access with IAM roles, integrating SSO solutions for seamless and secure access to AWS resources.
- Automated IAM policy creation and role assignment through AWS CLI and infrastructure-as-code tools, streamlining onboarding and access management processes.
- Designed and implemented AWS PAM strategies, including multi-factor authentication (MFA) and time-based, just-in-time access for critical resources to enhance security for privileged accounts.
- Established workflows and policies to control and monitor privileged access PAM, reducing risks associated with elevated permissions in AWS environments.
- Utilized AWS IAM and other AWS security services to enforce least-privilege access, ensuring compliance with regulatory standards.
- Conducted regular reviews and audits of privileged access logs, identifying potential security risks and enforcing corrective actions as a part of PAM.
- Authenticated the users to have access to API using the JWT token on Apigee Gateway.
- Designed and created MySQL database tables to normalize the existing tables. Created stored procedures to interact with databases.
- Thorough understanding of the differences and bugs in different browsers and versions.
- Worked on Continuous Delivery pipeline with Docker, Jenkins, and Code hub.

Environment: Java/J2EE, Java1.8, Linux, HTML, Spring, Liferay MVC Portlets, Liferay out of box portlets, Hibernate, SOAP, RESTful, Agile Methodology, Spring Boot, JSON, Micro Services, Servlets, AWS Arora, Unix Shell Scripting, Oracle, Apache Tomcat, GIT, SVN, Maven, JUnit, Jira, Jenkins.

Client: Teletracking Technologies, Pittsburgh, PA

Nov 2020 – Nov 2022

Role: Senior Java Developer

Responsibilities:

- Following Agile (Scrum) Methodology for developing application development.
- Developed the application with HTML5, CSS3, Angular 8, JavaScript, ES6, Rest API, SOAP API, Docker Image.
- Developed modules using Core Java APIs, Collections, Java 1.8 (Streams), Jordan API(Dates), Multi-threading, Exception Handling, Generics, Enums, Java I/O and object-oriented designs patterns.
- Used Microservice architecture with Spring Boot-based services interacting through a combination of REST and Apache Kafka message brokers.
- Managed public/private cloud infrastructures using Amazon Web Services (AWS), which includes VPC, EC2, S3, Cloud Front, ELB and Elastic Beanstalk.
- Used AJAX wherever asynchronous functions need to be implemented.
- Optimized HTML and JavaScript code to reduce web page loading time.
- Worked with Angular 6 Controllers, Directives, Services, Pipes, Guards, Angular Routing.
- Developing single page application by using Covalent open-source framework, which is built on Angular 6.
- Implemented design patterns in Scala for the application.
- Develop quality code adhering to Scala coding Standards and best practices.
- Implemented business rules management solutions using BRMS tools like IBM Operational Decision Manager (ODM) and Drools to automate and optimize complex decision-making processes across multiple business units.
- Collaborated with business stakeholders to gather requirements for decision-making processes, translating them into efficient, scalable business rules.
- Designed and developed decision tables, rule flows, and decision services using Drools to automate processes such as customer on-boarding, patient intake and treatment plans.
- Ensured that the business rules engine integrated seamlessly with other enterprise applications, leveraging REST APIs, SOAP services, and Java/JEE integration frameworks.
- Monitored and maintained the performance of the rules engine, optimizing rule execution and ensuring compliance with SLAs (service-level agreements) for transaction processing.
- Led testing, deployment, and version control of business rules using best practices, ensuring that rules were consistent, accurate, and easy to manage.
- Developed business components by using Spring Boot, Spring IOC, Spring AOP, Spring Annotations, Spring Cloud & Persistence layer by using Hibernate e/JPA along with Web Services (RESTful).
- Coordinated with cross-functional teams to support release management, including deployment, rollback, and post-release validation in production environments for production support.
- Having Good Experience in using Reactive API/programming while implementing the applications that are asynchronous and event-driven with the Spring based Web-Flux client.
- Implemented customized authentication in Spring Security to verify user-role and secure the user pages

- Integrated OAUTH, SSO, Hashi Vault with the application for Security.
- Contributed as key resource of the "Angular Framework Team" in conversion of existing UI screens of the application to Angular based UI.
- Used JAX-RS for creating Restful web service and implemented authentication by using OAuth2 Security Framework.
- Defined AWS Security Groups which acted as virtual firewalls that controlled the traffic allowed to reach one or more AWS EC2 instances.
- Took initiative in learning react native and went on to successfully develop various features under minimal supervision.
- Developed Spring Boot based Microservices & implemented Spring cloud/Netflix API architecture patterns (Eureka Service discovery, Configuration server)
- Working on AWS Lambda for event driven work flow, working on Databases, Creating and Hosting micro services on EC2 Instances, and automating things using JSON Scripts, Creating End-Points for the services, integrating through API's, involved in creation of APIs and API Gateways for by establishing Secure connection between the end-points
- Develop custom directives, controllers, views and filters using Angular 8
- Used Hibernate Transaction Management, Hibernate Batch Transactions and Hibernate Cache Concepts.
- Design complex SQL Queries, stored procedures & triggers on SQL Server database.
- Creation, enhancement, and maintenance of PostgreSQL database functions
- Used Stored Procedures for applications that needed to execute as part of a scheduling mechanism.
- Deployed Spring Boot based micro services Docker container using Amazon EC2 container services and using AWS admin console.
- Firm grasp on Cloud Security, leveraging Linux and Windows operating systems, using the AWS console and CLI (command line interface)
- Followed CSS grid and flexbox layout to arrange components in web applications.
- Implemented Micro Services using Spring Boot, Spring Cloud, and Spring Micro Services.
- Administered and deployed applications into WebSphere Application Server. Setup CI/CD pipeline process for the application using Jenkins.
- Experienced on spring framework applications like Spring Core, Spring AOP, Spring MVC, Spring Batch, Spring Security and Spring Boot and did integration to Micro services into existing system architecture.
- Design scripts to filter and transform the huge data in troubleshooting the issues.
- Analyse & Design user stories and perform code reviewing activities.
- Developed Test Cases and performed unit tests using JUnit with Mockito Framework.
- Developed angular unit test cases to test angular components using Grunt, Protractor, Karma and Angular 6, TypeScript.
- Expertise with redux type data stores using NgRx and implemented NGRX store to maintain the state of the application. NGRX store was used to store results after angular injector observable retrieved the data from backend.
- Built Confidential tool using Angular 2, RXJS, and NGRX platform and developed components as an independent module for reusability across the application.
- Tested REST API using REST Assured framework.
- Design Shell scripts to filter and transform the huge amount of data in troubleshooting the issues.

- Created JSON request and validated the response using postman Interceptor and Swagger UI.
- Used Log4j for logging and tracing the messages.
- Created Clusters via Kubernetes, worked on services, deployments, labels, health checks by writing YAML files.
- Worked on creating the Docker containers and Docker consoles for managing the application lifecycle.
- Worked on Jenkins for continuous integration with Gradle and GitHub.
- Sync Elasticsearch Data between the data centres using Kafka and Logstash. managing Kafka Cluster and integrated Kafka with elastic
- Use the JIRA tool for tracking new requirements, enhancements, bugs, and Git for version control.
- Document all the implemented features, enhancements, and improvements in a confluence page.

Environment: Java 8.0, JavaScript, Angular 6/8, HTML5, CSS3, Ajax, jQuery, Bootstrap, Spring 4, Scala, Hibernate, Spring batch, Spring Boot, JPA, JMS, AWS, Eclipse, PostgreSQL, SQL Server, Swagger UI, Log4j, JIRA, Docker, Kubernetes, Web Services, Node JS, Kafka, Microservices, Jenkins, REST UI, Gradle, Git Hub.

Client: Verizon, Detroit, MI

Dec 2018 – Nov 2020

Role: Senior Java Developer/ UI Developer

Responsibilities:

- Played a pivotal role in the analysis and requirements gathering Involved in design and development of the project.
- Co-ordination with Client and onsite leads Developed User interface using JSP, JavaScript, AJAX, JSON, Angular 2/4/6, HTML, and CSS
- Used advanced JavaScript to create interfaces and help manage cross browser compatibility.
- Implemented pagination using jQuery.
- Developed Single Page Web Application (SPA) using Angular 2/4/6
- Created a shared library of JavaScript, which can be shared across different applications, and used AngularJS template for redesigning the web page layout.
- Used JBOSS application server for application deployment and used Grunt for JavaScript packaging.
- Angular 4 is used for model binding and API calls.
- HTML5 used for the styling of the standard of the application.
- Routing used in Angular used to do proper routing of the different modules in the application.
- Developed the application to be responsive for desktop, mobile and tablets using Twitter Bootstrap (HTML5, CSS3 and JavaScript).
- Created plugins to extract data from multiple sources like Apache Kafka, Database and Messaging Queues.
- Micro Services have been built using spring boot, spring cloud and deploying to AWS Cloud.
- Used spring declarative transaction management to manage transactions in the application.
- Used JavaScript and jQuery to upgrade the designs and functionalities of website.
- Involved in Behaviour driven development (BDD) using Cucumber-JVM.
- Implementing and building web services in Docker.

- Worked with cross teams for creating efficient design and developing Spring boot applications using Java, J2EEspring framework, Hibernate and Micro services, User Interaction screens using HTML5, CSS3, JavaScript, Angular JS, AJAX and JSON.
- Implemented AWS IAM for managing the credentials of applications that run on EC2 instance
- Published and consumed a stream of records using Producer and Consumer APIs with Spring for Apache Kafka.
- Developed angular unit test cases to test angular components using Karma and Jasmine.
- Worked with AWS EC2 instances for JBOSS, created custom scripts and applications using the AWS SDK.
- Involved SOAP-UI old side/new side testing/recursive testing.
- Implemented complete on boarding workflow using angular 4, NodeJS and Loopback
- Used Maven build tool to build and deploy the application and Jenkins for continuous integration.
- Used Subversion (SVN) as the configuration management tool to manage the code repository and Jenkins for automated deployment.
- Developed the application using J2EE architecture specification and Design patterns.
- Used extensively in Eclipse in development and debugging the application.
- Used SVN version controller to manage the code versions.

Environment: Java, Typescript, JavaScript, HTML5, CSS, Ajax, jQuery, Bootstrap, Angular 2/4/6, ngx, RxJS, MYSQL, Webservices, Rest API, NPM, NodeJS, AWS GitHub, Jasmine, Karma, Jenkins Scrum, Kafka, JSON, XML, Jira

Client: Centillionz, India

Feb 2017 – Dec 2018

Role: Java/ J2EE Developer

Responsibilities:

- Developed dynamic web pages using HTML5, CSS3, ReactJS, Redux, React-Router, and Material UI
- Using Java Script functions for the custom validations.
- Designed and developed Micro Services Architecture to divide application into business components using Spring Boot.
- Bottle micro framework implemented with RESTful API with MySQL database. Building cloud Microservices using Spring Boot.
- Expertise in Red hat Linux Capacity and Performance Planning.
- Developed using Struts, JSPs and Tiles definitions.
- Developing Online panels and application using EJB, Java Servlets, Session Entity Beans
- Handled the database persistence using JDBC
- Created ReactJS components, modules, and managed States and Props while utilizing ES6 features
- Designed and developed REST web service for validating address.
- Developed the application using JSF for front end, Spring to manage business layer components.
- Implemented the project using the Spring Framework used Spring IOC and Dependency Injection, Spring MVC
- Used Spring Framework and created the Dependency injection for the Action classes using ApplicationContext.xml.
- Developed JSP pages using HTML, JSTL Tag Library, Struts Tab Library, and JSP Custom Tags.

- Writing JSP form bean validations by using Struts Validation framework validation.xml, validator-rules.xml and message Resources.
- Used Hibernate for object Relational Mapping and used JPA for annotations.
- Used Criteria API and HQL for data extraction.
- Deployed applications on GCP (Google Cloud Platform).
- Widely used GCP storage services like Google Cloud Storage, Cloud SQL, Cloud Bigtable.
- Also worked on the GCP Bigdata services like Big Query, Google cloud datastore, Google cloud Dataproc.
- Used React Router for creating routes in the application
- Performed Validations on UI data using JSF validations and JavaScript
- Involved in implementing the rich user interface using JSP Standard Tag Libraries and worked with custom tags.
- Performed client-side validations using java script functions to implement various functionality
- Used Redux to maintain the entire State. Developed well designed Store, Actions, and Reducer
- Worked on ancillary technologies/tools portal/portlet development, BPM, rules engines, security/SSO, and UML
- Worked on designing/developing of large, transactional, enterprise class systems
- Worked on externally facing web-based applications.
- Experience with Virtual Machine Backup and Recover from a Recovery Services Vault using Azure PowerShell and the portal.
- Migrating an On-premises virtual machine to Azure Resource Manager Subscription with Azure Site Recovery.
- Hands On work with Azure MFA (Multi Factor Authentication) Servers and Phone factors for 2 step Security.
- Worked on Microsoft Azure Storage - Storage accounts, blob storage, managed and unmanaged storages.
- Managing the Windows Azure infrastructure for our customers depends on their requirements.
- Actively worked on deploying VM's, Virtual Networks, Gateways and Next Gen Firewalls.
- Implemented the function to send and receive AMQP messages on RabbitMQ synchronously and asynchronously, and send JMS message to Apache ActiveMQ on the edge device.

Environment: Core Java, Java EE, S, React JS, HTML, CSS, Java Script, Ajax, Bootstrap, jQuery, XML, XSL, JSTL, JSP, AJAX Micro Services, Azure, IBM WebSphere, WebLogic, Apache Tomcat, Web Services, Spring, Struts, Spring Boot, Hibernate, PL/SQL, RabbitMQ

Client: Talent Sprint, India

Mar 2015 – Feb 2017

Role: Java/ J2EE Developer

Responsibilities:

- Developed the application using Java, J2EE, Struts, and JDBC.
- Extensively used Struts UI tags for developing UI Pages.
- Implemented fundamental web functions using JavaScript and jQuery.
- Development, resolving the issues/bugs, Code suggestions, Technical Issues and was involved in writing Stored Procedures, Triggers and Cursors.
- Developed reusable directives using angular JS

- Played a key role in the implementation of the web application.
- Implemented the Consolidated applications front-end pages using JSP's, JSTL, and Struts Tag Libraries.
- Designed the Web application implementing the Struts framework for Model-View-Controller (MVC) pattern to make it extensible and flexible.
- Implemented dynamic web applications using AJAX and JSON
- Implemented Hash table and hash set for inserting and retrieving values.
- Used MVC-Struts framework in the front-end to develop the User Interface.
- Configured Jenkins jobs for Application Deployments to the AWS cloud environments.
- Implemented enterprise applications using WSDL, SOAP and XML schema.
- Developed different design methodology such as MVC patterns.
- Used Hibernate for Object mapping.
- Worked on the Java Collections API for handling the data objects between the business layers and the front end.
- Implemented the architecture with Struts-Config, Action Form classes & Action classes.
- Developed the helper classes used by most of the components in this application.
- Used prepared statements and callable statements to implement batch insertions and access stored procedures.
- Involved in bug fixing and for the new enhancements. Tested Web Services using SOAP UI toolkit locally.
- Responsible for handling the production issues and provides immediate solution.
- Configured Logger, appended and layout using log4j, SVN used as Source & version control for rebasing & delivering code.
- Involved in bug fixing for dev and testing issues, Prepared Unit test cases as well performed Unit testing.

Environment: Java, J2EE, Multi-Threading, HTML, CSS, Java Script, Ajax, Angular JS, MVC Servlet, JSP, Struts, AWS, SOAP UI, JDBC, log4j, SVN, JNDI, WebLogic Server 8.1, Oracle.
