

Professional Summary

Versatile Full Stack Developer with hands-on experience building scalable backend systems, real-time data pipelines, and secure cloud-native platforms. Proven track record at Databricks, Optum, and FlomadLabs delivering enterprise-grade solutions using Java, Spring Boot, React, Kafka, PySpark, and AWS. Specialized in integrating full-stack development with data engineering and cloud automation. Adept at designing APIs, CI/CD pipelines, and secure OAuth2.0-based systems. Passionate about solving complex problems, driving performance, and building platforms that empower both engineers and analysts to move fast with confidence.

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks & Libraries: Spring Boot, Spring Batch, Hibernate, React.js, Redux, Express.js, Flask, TailwindCSS, Chart.js

Cloud & DevOps: AWS (EC2, S3, EKS, Auto Scaling, ELB), Azure Fundamentals, Docker, Kubernetes, Jenkins, GitHub Actions, Helm, Databricks Asset Bundles

Data Engineering & Big Data: Apache Kafka, Kafka Streams, PySpark, Delta Lake, Delta Live Tables, Databricks SDK, Auto Loader, DQX

Databases & Caching: PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch

Authentication & Security: OAuth 2.0, JWT, Spring Security, Unity Catalog (RBAC), CSRF Protection

Monitoring & Logging: Prometheus, Grafana, Slack Alerts, Databricks Jobs API, ELK Stack

Testing & API Tools: Postman, Swagger/OpenAPI, JUnit, Mockito

Version Control & Collaboration: Git, GitHub, Bitbucket, Jira, Confluence

Professional Experience

Full Stack Developer

Databricks | May 2025 – Present

Internal Platform Projects: ETL Orchestration & Data Quality Governance

- Developed a centralized, full-stack **self-service platform** enabling both technical and non-technical users to build, monitor, and manage **Databricks Lakehouse ETL pipelines** through a visual interface and secure APIs.
- Built and maintained scalable **REST APIs** using **Java (Spring Boot)** to integrate with **Databricks SDK, Jobs API, Lakeflow**, and **DQX** for pipeline orchestration, quality automation, and data workflow execution.
- Engineered interactive, role-based user interfaces using **React.js, Redux**, and **TailwindCSS** for ETL pipeline creation, monitoring, log tracking, and data quality rule management.
- Integrated **Databricks Asset Bundles** with **GitHub Actions** to automate CI/CD pipelines, enabling **version-controlled deployments** with **<10-minute rollback support** across environments.
- Reduced manual errors and data latency by automating over **100 data quality checks** using DQX, and implemented visual dashboards using **Chart.js** to track schema validation, null checks, and uniqueness metrics.
- Enabled proactive incident response by implementing **Quartz Scheduler, Slack/email alerts**, and **Prometheus-Grafana** dashboards, improving **issue resolution speed by 3x**.
- Strengthened platform security and governance through **OAuth 2.0 integration** and **Unity Catalog-based RBAC**, ensuring secure, compliant, and auditable data access across all users.
- Reduced pipeline creation time by **60%**, decreased QA overhead by **70%**, and significantly improved reliability of production data workflows.

Full Stack Developer

FlomadLabs, USA | Jan 2025 – May 2025

Secure & Scalable E-Commerce Transaction System

- Led the development of secure and scalable **RESTful APIs** for order management and real-time payment processing using **Spring Boot**, improving backend modularity and performance.
- Designed and executed **Spring Batch jobs** for background data processing tasks such as **order reconciliation** and **settlement reporting**, ensuring no impact on live system performance.
- Resolved performance bottlenecks by **optimizing PostgreSQL and MongoDB** with **indexing, query partitioning**, and **refactoring**, leading to a **~50% reduction in database latency**.
- Strengthened backend security by implementing **OAuth 2.0 with Spring Security** and transitioning from token-based auth to **cookie-based session management**, mitigating vulnerabilities in session handling.
- Migrated legacy raw SQL queries into **JPQL** and optimized Hibernate mappings to improve database query efficiency and ORM maintainability.
- Worked closely with **frontend teams** for smooth API integration and collaborated with **QA engineers** for end-to-end test coverage and deployment validation.

- Deployed and tested backend services using **Docker**, and documented APIs using **Swagger** and **Postman** to enable seamless cross-team collaboration.
- Technologies: Spring Boot, Spring Batch, Hibernate, PostgreSQL, MongoDB, OAuth 2.0, Spring Security, Docker, Swagger, Git, Postman

Software Engineer

Optum – India | Oct 2020 – Aug 2023

Distributed systems, microservices, real-time event processing, cloud-native deployments, and low-latency applications

- **Designed and implemented a distributed microservices architecture** using **Spring Boot** and **Java**, migrating from a monolithic system to enable scalable and regionally fault-tolerant deployments on **AWS**.
- Deployed services across multiple AWS regions with **load balancing**, **auto-scaling**, and **health checks**, resulting in **99.98% uptime** and seamless failover handling.
- **Developed high-performance REST APIs** using **Node.js** and **Express.js**, improving response times by **40%** under peak loads with **asynchronous processing**, **non-blocking I/O**, and **PM2-based multi-threading**.
- Built a **real-time transaction pipeline** using **Apache Kafka** and **Redis**, enabling **sub-second latency event processing** and improving analytics and alerting speed by **over 50%**.
- **Containerized all backend services** using **Docker** and deployed on **Kubernetes (AWS EKS)** using **Helm**, reducing deployment time, minimizing human error, and improving scalability by **60%**.
- Automated deployment pipelines with **Jenkins**, including **rolling updates**, **liveness/readiness probes**, and resource management for robust production deployments.
- Collaborated cross-functionally with **Platform, API, DevOps, and Data teams** to align infrastructure and engineering efforts with business SLAs and product goals.
- Technologies: Spring Boot, Java, Node.js, Express.js, Redis, Apache Kafka, Docker, Kubernetes, Helm, Jenkins, AWS (EC2, ELB, Auto Scaling, EKS), PM2, Nginx

Education

Master of Science in Computer Science | Aug 2023 – May 2025

State University of New York (SUNY) | New Paltz, NY, USA

Relevant Coursework: Data Structures and Algorithms, Dynamic Programming, Artificial Intelligence, Network Security

Academic Projects

AI-Powered Log Anomaly Detection System | Jan 2024 – May 2024

Tools: Python, Scikit-learn, Kafka, Flask, Elasticsearch, Prometheus, Grafana, Docker, MongoDB

- Built a real-time anomaly detection system using **Kafka** to stream logs and **Scikit-learn** for machine learning-based anomaly detection.
- Developed RESTful APIs using **Flask** to serve anomaly insights and integrated with **Elasticsearch** for log querying and analytics.
- Deployed visual monitoring dashboards via **Prometheus** and **Grafana**, enabling real-time alerts on system failures.
- Reduced debugging time by over **50%** by proactively identifying log anomalies in distributed microservice environments.

Secure Cloud-Based File Sharing Platform with RBAC | Aug 2024 – Dec 2024

Tools: Java, Spring Boot, React.js, PostgreSQL, OAuth 2.0, AWS S3, JWT, Docker

- Developed a secure, full-stack file-sharing platform with **role-based access control (RBAC)** using **Spring Boot** and **React.js**.
- Implemented **OAuth 2.0 and JWT-based authentication** to manage secure sessions and user authorization levels (Admin, Editor, Viewer).
- Integrated **AWS S3** for encrypted cloud file storage and designed audit logs for file access and sharing history.
- Delivered a production-ready application emphasizing **data privacy**, **session security**, and **multi-user collaboration**.

Certifications

-
- Databricks Certified Data Engineer Associate
 - Oracle Certified Foundations Associate – Java
 - Oracle Certified Foundations Associate – Database
 - Microsoft Certified: Azure Fundamentals
