

Amrutha Metapalli

Software Engineer

Contact: 8454436299

Email: ametapalli@gmail.com

LinkedIn: <https://www.linkedin.com/in/amrutha-metapalli/>

Professional Summary:

Accomplished Backend Developer with 8+ years of hands-on experience in designing, developing, and maintaining robust and scalable software solutions. Proficient in Java and J2EE frameworks, with a keen focus on optimizing performance and reliability. Demonstrated expertise in database management, API integration, and system architecture design. A proactive team player with a proven track record of delivering high-quality projects on time and exceeding client expectations.

Technical Skills:

Java, J2EE, React, Angular, Javascript, typescript	Spring Framework (Spring Boot, Spring MVC, Spring Data, Spring Security), Hibernate, RESTful APIs
AWS (EC2, S3, Lambda, RDS, DynamoDB, ECS, EKS), Azure, Google Cloud Platform	RabbitMQ, Apache Kafka, ActiveMQ
Linux, Windows, Unix, MacOS	Eclipse, IntelliJ IDEA, Visual Studio Code, NetBeans
Maven, Jenkins, Gradle, Docker, Kubernetes, Terraform	MySQL, MongoDB, PostgreSQL, Oracle, Cassandra

Professional Experience

Software Engineer Developer

ASAR Digital

Mar 2020 – Current

Responsibilities:

- Designed and implemented high-value E-Commerce platforms leveraging Java 11+, Spring Framework, and Cloud-native technologies, delivering significant business outcomes ranging from \$300K to \$1.5M, while optimizing for scalability and cloud efficiency on GCP.
- Led and coordinated on-shore and off-shore teams of 10-15 developers, providing project oversight, establishing sprint goals, and ensuring timely, cost-effective delivery in line with business objectives.
- Increased sales and customer engagement by 15% by deploying innovative features such as personalized product recommendations and dynamic marketing emails, using analytics from order history and browsing behavior to tailor content.
- Enhanced backend system performance by integrating asynchronous processing models, optimizing efficiency and responsiveness through tools like Spring Boot, Java's asynchronous

capabilities, and Redis for fast, in-memory caching of frequently accessed data, reducing latency and enhancing user experience.

- Developed RESTful APIs using Spring Boot and a microservices architecture, enabling efficient service communication and scaling of applications with Google Kubernetes Engine (GKE) for container orchestration and automated scaling.
- Designed and implemented a GraphQL API for seamless and efficient data retrieval, improving client-server interactions and reducing API overhead.
- Implemented high-performance data storage solutions, using Google Compute Engine VMs for flexible and customizable infrastructure, and MySQL/PostgreSQL for relational database needs, ensuring reliable and scalable database architectures.
- Integrated Google Cloud Operations for logging and real-time application monitoring, leveraging application performance insights to proactively enhance system reliability and response times.
- Utilized Google Cloud Load Balancers to ensure efficient traffic distribution across Compute Engine VMs and GKE clusters, enhancing application availability and fault tolerance.
- Advocated for Test-Driven Development (TDD) practices to ensure code quality and maintainability, leading to a robust, production-ready codebase with minimal defects.
- Automated the infrastructure deployment pipeline using Terraform ensuring environment consistency across multiple stages.
- Version-controlled code using GitHub, employing GitFlow and automated workflows to support collaboration, peer reviews, and seamless integration of code changes.

Associate Developer

Perficient Inc., San Francisco, CA

Sep 2019 – Mar 2020

Responsibilities:

- Directed the design and development of Java-based web applications for health insurance management, leveraging Java 8+, Spring Boot, and microservices to enhance system efficiency, scalability, and performance.
- Played a pivotal role in agile development workflows, championing rapid prototyping, iterative development, and continuous feedback to deliver solutions that met the dynamic needs of healthcare clients.
- Established and maintained CI/CD pipelines using Jenkins and GitHub Actions, streamlining deployment processes, ensuring version control consistency, and automating environment management from development to production.
- Deployed and orchestrated microservices on Google Kubernetes Engine (GKE), harnessing containerization to accelerate deployments and simplify the management of complex, distributed systems in a cloud-native environment.
- Optimized resource utilization with Google Cloud Autoscaler, ensuring that the infrastructure automatically scaled based on real-time demand, improving application performance and reducing unnecessary resource expenditure.
- Integrated various GCP services like Google Cloud Memorystore (Redis) for caching, Cloud SQL (MySQL) for database management, and Google Cloud Pub/Sub for efficient messaging, creating a robust, high-performance backend infrastructure.

- Implemented Google Cloud Load Balancers to efficiently distribute traffic across multiple application instances, ensuring scalability, high availability, and fault tolerance for mission-critical applications.
- Automated infrastructure provisioning with Terraform and Google Cloud Deployment Manager, streamlining the deployment process and guaranteeing consistent environments across development, staging, and production.
- Optimized database performance by fine-tuning Cloud SQL (MySQL/PostgreSQL) instances, implementing replication and failover strategies to ensure high availability and disaster recovery in production environments.
- Improved application security by integrating Identity and Access Management (IAM) and Google Cloud Key Management (KMS) to safeguard sensitive data and control access to resources, ensuring compliance with industry regulations.
- Enhanced logging and debugging capabilities by integrating Google Cloud Logging and Error Reporting, enabling faster issue identification and resolution to reduce system downtime and improve reliability.

Software Engineer

Blue Cross & Blue Shield of Mississippi, Jackson, MS

Apr 2019 – Aug 2019

Responsibilities:

- Developed web application using Java and Spring MVC framework, contributing to the full software development lifecycle.
- Collaborated with a team of developers to design and implement robust, scalable, and maintainable solutions.
- Utilized Spring MVC architecture to create efficient and responsive web applications, ensuring high performance and user satisfaction.
- Developed backend web services using Java and the Spring MVC framework, enhancing application functionality and user experience.
- Modernized an existing application by transitioning from Struts to Spring Boot, significantly improving the system's maintainability and performance.
- Crafted and executed comprehensive unit tests using Mockito to ensure robustness and reliability of new features.
- Implemented RESTful APIs to enable seamless communication between front-end and back-end systems.
- Integrated front-end components with back-end logic, ensuring seamless functionality and a cohesive user experience.
- Participated in code reviews and performed debugging to identify and resolve issues, ensuring the delivery of high-quality software products.
- Worked closely with stakeholders to gather requirements, clarify specifications, and deliver solutions that met business objectives.
- Contributed to the optimization of application performance and scalability, identifying areas for improvement and implementing enhancements.
- Stayed updated with industry best practices and emerging technologies, continuously enhancing

skills in Java development and Spring MVC framework.

Java Full Stack Developer

Dish Network, Englewood, CO

Dec 2017 – Mar 2019

Responsibilities:

- Dish Network LLC provides multichannel television and satellite television via DISH network.
- Involved in programming, testing, debugging, implementing and maintaining Java EE client/server distributed applications to meet the organization's needs.
- Designed and developed various modules of the application with J2EE design architecture and frameworks like Spring MVC architecture and Spring Bean Factory using IOC, AOP concepts.
- Worked on Java 8 with lambda expressions to process and store the data.
- Followed Scrum/Agile for project implementation.
- Utilized AWS services like API Gateway for developing RESTful APIs.
- Developed business components using Spring boot, IOC, AOP, Spring annotations and created user detail service for authentication and access control using Spring LDAP and Spring Security.
- Developed server-side application to interact with databases using Spring Boot and Hibernate.
- Strong Experience in Web Services using REST (JAX-RS, Jersey and SPRING) with XML/JSON. Both Produce and Consume Web Services. Developed Microservices using Spring Boot.
- Implemented version controlling using GIT and used Jenkins for continuous integration. Wrote build & deployment scripts using Maven on the UNIX environment and integrated using Jenkins.
- Developed unit test cases using Junit, Spring Mocks and Mockito.
- Developed integration test cases using Spring MVC testing framework.
- Reviewed pull requests to make sure followed all the security guidelines.
- Worked closely with developers to meet the deadlines.
- Took end to end responsibility for the project development.

Education

- Master of Science, Computer Science, State University of New York At New Paltz
- Bachelor of Technology B. Tech

Certifications:

- Customer Data Cloud Certified Associate
- Oracle Certified Associate, Java SE 8 Programmer
