

Appi Reddy Mandapati

JAVA FULL STACK DEVELOPER

Massachusetts, USA | (551) 465-6468 | appireddymandapati08@gmail.com | [LinkedIn](#)

SUMMARY

- Experienced Java Full Stack Developer with 4+ years of expertise in designing, developing, and deploying scalable web applications using Java, Spring Boot, React.js, and Angular in enterprise environments.
- Proficient in building microservices architecture with Spring Cloud, RESTful APIs, and GraphQL, ensuring high availability, modularity, and maintainability of distributed systems.
- Strong frontend development skills in React.js, Angular, TypeScript, Redux, HTML5, CSS3, Bootstrap, and Tailwind CSS, delivering responsive and dynamic user interfaces.
- Skilled in database design and optimization with MySQL, PostgreSQL, MongoDB, and Redis, implementing caching strategies and query performance improvements for high-speed data retrieval.
- Hands-on experience with containerization and cloud deployment using Docker, Kubernetes, AWS (EC2, S3, RDS, Lambda), and Azure, ensuring seamless scalability and operational efficiency.
- Expertise in authentication, security, and access control using Spring Security, OAuth2, JWT, SAML, and RBAC, ensuring compliance with industry security standards.
- Proficient in CI/CD pipeline automation using Jenkins, GitHub Actions, Terraform, and Ansible, streamlining the deployment process and enhancing system reliability.
- Strong knowledge of Agile methodologies (Scrum, Kanban), DevOps best practices, and monitoring tools like ELK Stack, Prometheus, and Grafana, ensuring proactive issue resolution and system stability.

SKILLS

Programming Languages:	Java, Java 8/11/17, JavaScript, TypeScript
Frontend Technologies:	Angular, React.js, Vue.js, HTML5, CSS3, SCSS, Bootstrap, Tailwind CSS
Backend Frameworks:	Spring, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Struts
Microservices & API:	RESTful APIs, SOAP, GraphQL, OpenAPI, Swagger
Databases:	MySQL, PostgreSQL, MongoDB, Oracle
Cloud & DevOps:	AWS, Docker, CI/CD Pipelines
Build Tools:	Maven, Gradle
Version Control:	Git, GitHub, GitLab, Bitbucket
Authentication & Security:	JWT, OAuth2, SSL/TLS, HTTPS
Message Queues:	Kafka, RabbitMQ, WebSockets
Testing Frameworks:	JUnit, Mockito, Selenium, Postman, SonarQube
Logging & Monitoring:	ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana
Methodologies & Tools:	Agile, Scrum, Kanban
Other Technologies / Skills:	WebSockets, GraphQL, Object-Oriented Programming (OOP), Multithreading, Exception Handling, Collections Framework, Streams API, Lambda Expressions, Functional Programming, Web Components, Responsive Design, Cross-Browser Compatibility, Microservices Architecture, Database Performance Tuning, Role-Based Access Control (RBAC), Software Development Lifecycle (SDLC)

EXPERIENCE

- | Java Full Stack Developer Fidelity Investments, MA | Jul 2024 – Present |
|--|--------------------|
|--|--------------------|
- Collaborated with business analysts and investment product managers to gather functional requirements for Fidelity's digital wealth management and retirement planning platform, ensuring compliance with SOX, SEC regulations, and PCI-DSS.
 - Developed and optimized a microservices-based architecture using Spring Boot, Hibernate, and PostgreSQL, resulting in 35% lower latency and 50% better scalability for portfolio management and retirement account services.
 - Implemented caching strategies using Redis to improve access to frequently requested market data, portfolio valuations, and mutual fund NAVs, reducing database load by 45%.

- Designed and developed dynamic UI components with Angular 12, TypeScript, Bootstrap, and Tailwind CSS, reducing load time by 30% and enhancing user experience for 401(k) dashboards, investment planning tools, and performance analytics.
- Integrated enterprise security features using OAuth2, JWT, and SAML-based authentication for secure user sessions and investment transactions, improving compliance with ISO 27001 and GDPR.
- Designed and implemented event-driven architecture using Apache Kafka, enabling asynchronous communication between microservices such as trade execution, portfolio updates, and account rebalancing.

Java Full Stack Developer | HCL Tech, India

May 2020 – Jul 2023

- Implemented a microservices architecture using Java, Spring Boot, and Spring Cloud Gateway, resulting in a 40% reduction in API response times and enabling independent scaling of 12 distinct service modules.
- Designed and developed RESTful APIs with Spring WebFlux for reactive programming, handling 3M+ daily requests with 99.97% uptime and average response times below 120ms.
- Utilized Hibernate/JPA with custom query optimization techniques to improve database performance by 45%, reducing query execution time for complex financial reports from 12s to 6.5s.
- Designed normalized MySQL database schemas for transactional data and MongoDB collections for document storage, implementing efficient indexing strategies that supported 2.5TB of financial records.
- Developed responsive single-page application using React, TypeScript, and Redux for state management, resulting in a 28% improvement in user workflow efficiency based on analytics.
- Implemented dynamic dashboards with D3.js and Recharts that visualized real-time financial metrics, processing and rendering 2.5M daily transactions with sub-second performance.
- Created reusable UI component library with 35+ custom components using Styled Components and React Context API, reducing frontend development time for new features by 40%.
- Established CI/CD pipelines using Jenkins, SonarQube, and JUnit, maintaining 92% code coverage and reducing code smell by 35%, resulting in 67% fewer production defects.
- Containerized application services with Docker and orchestrated deployment with Kubernetes on AWS EKS, achieving 99.95% uptime and reducing infrastructure costs by 30%.
- Implemented blue-green deployment strategies that eliminated downtime during releases, successfully completing 200+ zero-downtime deployments per year.
- Integrated AWS services (S3, Lambda, EC2, CloudWatch) to enhance system scalability and monitoring, supporting 3x user growth while maintaining consistent performance.
- Optimized application performance using React lazy loading, Java multithreading, and database query parallelization, decreasing average end-to-end transaction processing time from 3.2s to 1.2s for complex financial operations.

EDUCATION

Master of Science in Computer Science - Rivier University, NH, USA

B. Tech in Computer Science and Engineering – Siddhartha Institute of Engineering and Technology, India
