

AQSAT ASIF

NewPaltz, NY, USA | +1(845) 873-3270 | aqsat@jobhuntus.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building end-to-end applications with Java (Spring Boot) and the JavaScript ecosystem (React, Angular, Node.js, Redux). Adept at designing secure APIs, scaling microservices, and deploying to cloud-native environments on AWS and Kubernetes. Proven ability to deliver high-performance systems across healthcare, retail, and enterprise domains, driving faster releases and stronger user outcomes.

TECHNICAL SKILLS

Frontend: React.js, Angular, Redux, TypeScript, JavaScript

Backend: Java, Spring Boot, Hibernate/JPA, Node.js, Express.js, RESTful APIs, Microservices Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (ECS, EKS, RDS, CloudWatch), Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Heroku, MongoDB Atlas

Security: OAuth 2.0, JWT, Spring Security, OWASP Practices

Testing & Tools: JUnit, Postman, Swagger

Methodologies: Agile/Scrum, CI/CD Pipelines

PROFESSIONAL EXPERIENCES

Full Stack Developer

Verily, USA | Oct 2024 – Present

- Designed and developed a responsive analytics dashboard using React.js, Redux, and TypeScript, improving data accessibility for clinicians and increasing user engagement by 20%.
- Built and optimized RESTful APIs with Node.js & Express.js to enable real-time integration of patient data across healthcare systems, reducing data retrieval latency by 25%.
- Implemented microservices architecture with Docker & Kubernetes, supporting scalable and fault-tolerant deployments for critical healthcare applications.
- Deployed cloud-native healthcare applications on AWS (ECS, RDS, CloudWatch), achieving high availability and cost efficiency in production while ensuring compliance with HIPAA standards.
- Enhanced application security by implementing OAuth 2.0, JWT, and OWASP best practices, safeguarding sensitive patient information and ensuring regulatory compliance.
- Automated CI/CD pipelines using Jenkins & GitLab CI/CD, reducing release cycles by 40% and accelerating delivery of new features for clinical and research teams.

Java Backend Developer

EDB, India | Jan 2023 - Aug 2023

- Engineered and deployed RESTful microservices for core retail functions (User, Product, Order, Payment, Inventory) using Java, Spring Boot, Hibernate, JPA, and PostgreSQL, with emphasis on advanced SQL query optimization, schema design, and data modeling to support enterprise reporting and analytics.
- Designed and implemented authentication and authorization layers with Spring Security + JWT/OAuth2, ensuring secure transactions and customer data protection in alignment with enterprise compliance standards.
- Optimized PostgreSQL workloads through query tuning, Redis caching, and asynchronous processing, reducing transaction latency by over 40% and enabling real-time data access for dashboards and retail analytics supporting 10k+ concurrent shoppers.
- Partnered with DevOps to containerize and orchestrate retail microservices on AWS EKS (Kubernetes), integrating monitoring pipelines with AWS RDS, CloudWatch, and custom log analytics to ensure database reliability, fault tolerance, and high availability.

Jr. Software Engineer

Cognizant Technology Solutions Pvt Ltd, India | Jul 2021 - Jan 2023

- Designed and implemented REST APIs for cart management, order checkout, and employee leave requests using Java, Spring Boot, Node.js, Express, MySQL, and MongoDB, ensuring scalability and supporting 200+ concurrent users during load testing.
- Integrated Stripe payment gateway for secure transaction handling and implemented JWT-based role authentication, improving security and enabling controlled access for employees, managers, and admins.
- Developed and maintained responsive UIs using React and Angular, optimizing checkout workflows, dashboards, and request approval flows, which improved user experience and reduced form submission errors by 20%.
- Collaborated with a 4-member team in agile sprints, contributing to daily standups, code reviews, and sprint planning to ensure on-time feature delivery and alignment with functional/non-functional requirements.
- Improved code quality by writing unit and integration tests (JUnit, Postman), achieving 85%+ test coverage, and documenting REST endpoints with Swagger for smooth onboarding of new developers.
- Deployed and monitored the application on AWS/Heroku with MongoDB Atlas, leveraging CloudWatch dashboards to track performance, leading to 25% faster queries and proactive error resolution.
- Enhanced CI/CD pipeline by configuring GitHub Actions for automated builds and test runs, reducing manual deployment time by 30%.

Software Development Intern

Databricks, India | Oct 2020 - Jun 2021

- Built a front-end Inline Variable-Value Preview feature in the ServiceNow code editor using React, TypeScript, Redux, and Node.js, delivering a seamless real-time debugging experience.
- Enhanced developer productivity by 30% by designing and implementing UI components that enabled real-time variable inspection, reducing debugging cycles for large-scale data workflows.
- Improved front-end performance by 25% by introducing asynchronous data fetching and optimizing Redux state management, significantly lowering UI latency in high-volume environments.

EDUCATION

Master of Science in Computer Science | State University of New York, New Paltz, USA

May 2025

B. Tech Computer Science and Engineering | C.V. Raman Global University, India

Jul 2021

PROJECTS

Real-Time Fraud Detection Microservice (Fintech)

- Engineered a real-time fraud detection microservice using Java, Spring Boot, Kafka, and Redis, processing 10M+ daily transactions and reducing fraud by 32%.
- Developed a rule-based scoring engine and integrated JWT, OAuth2, and TLS for secure API access, ensuring PCI-DSS compliance.
- Deployed services to AWS ECS using Docker, implemented logging with CloudWatch, and automated delivery via Jenkins and GitHub Actions.

HIPAA-Compliant Patient Monitoring & Appointment System (Healthcare)

- Built a HIPAA-compliant platform using Node.js (Express.js) and Spring Boot, enabling real-time appointment booking and WebSocket-based vitals monitoring for 50,000+ patients.
- Integrated with FHIR APIs and secured services using OAuth2, JWT, and TLS, ensuring regulatory compliance and data privacy.
- Deployed to Azure App Services with Docker, implemented CI/CD pipelines via Jenkins, and monitored performance using Azure Monitor and ELK Stack.

CERTIFICATIONS

- Diploma in IT Architecture, Centre for Development of Advanced Computing(C-DAC), India ([Link](#))
- Java Programming for Software Developers ([Link](#))
- Spring Boot Developer Certification ([Link](#))
- Data Structures in Python ([Link](#))
