SUMMARY

Experienced **Software Engineer** with **5+ years** in the **financial services domain**, specializing in backend and full-stack development using **Java**, **Spring Boot**, and the **MERN stack**. Proven ability to design and deploy scalable, cloud-native applications on **AWS** using **Docker** and **Kubernetes**. Strong background in building secure, real-time systems for **transaction processing**, **portfolio tracking**, and **fraud detection**, with a focus on performance, reliability, and clean code architecture.

EXPERIENCE

Software Development Engineer

Northern Trust

June 2024 - Present, USA

- Developed and maintained **12+ scalable microservices** using **Java**, **Spring Boot**, and **REST APIs** that processed over **\$150M** in daily transactions across investment and treasury systems.
- Designed backend logic to streamline financial reconciliation workflows, reducing manual intervention by **48%** and improving data accuracy in reporting.
- Created **6+** client-facing modules using **React.js** and **Node.js**, enhancing portfolio visualization tools and leading to a **18%** increase in platform adoption among institutional users.
- Built integrations with **MongoDB** and **MySQL** to support real-time querying of client holdings and transaction histories, resulting in **28%** faster response times.
- Spearheaded deployment automation with **Docker**, **Kubernetes**, and **AWS EC2**, reducing production incidents by **22%** and improving deployment speed by **37%**.
- Launched a real-time **fraud detection system** using third-party risk **APIs**, preventing an estimated **\$2M+** in potential fraudulent transactions in the first quarter of release.
- Developed **JUnit** test suites covering **87%** of backend code and Selenium test scripts for frontend workflows, reducing **QA** regression cycles by **25%**.
- Participated in **Agile Scrum ceremonies**, contributing to **100% on-time sprint deliveries** across 3 critical releases aligned with **Q3** investment product launches.

Software Developer

LTI Mindtree

September 2019 - July 2023, India

- Developed and maintained core backend systems using **Java**, **Spring Boot**, and **Hibernate** for leading insurance and investment clients, supporting applications that processed over **2M+ monthly transactions**.
- Built and optimized **React.js** and **Node.js** interfaces for policyholder and broker dashboards, increasing user engagement by **38%** and reducing support queries by **22%**.
- Refactored **SQL** and **NoSQL** queries for high-frequency trading platforms, decreasing data retrieval time by **42%** and improving report generation efficiency.
- Led modernization of **15+ legacy REST APIs** to support evolving financial data standards, cutting integration time for downstream systems by **28%**.
- Created secure authentication flows using **OAuth2** and **JWT** for internal financial tools, aligning with enterprise-grade security compliance standards (SOC 2).
- Developed **CI/CD pipelines** using **Jenkins** and **Docker** for **10+ critical services**, reducing deployment time from hours to **under 10 minutes**.
- Coordinated with cross-functional teams across 3 continents to deliver software solutions aligned with financial regulatory requirements, achieving **89%** defect-free deployments.
- Mentored 5 junior developers, implemented code review processes, and authored internal documentation that improved onboarding time by **35%**.

EDUCATION

Masters of Science in Computer Science

University of Massachusetts Boston • USA • 2025

Bachelor of Technology, Computer Science

Jawaharlal Nehru Technological University Hyderabad • India • 2020

PROJECT

Real-Time Stock Portfolio Tracker with Alerts

December 2024 - April 2025

- **Built** a real-time stock tracking platform using **React.js**, **Node.js**, and **WebSockets**, enabling users to monitor 1,000+ financial instruments with live updates.
- **Integrated** Alpha Vantage API and implemented custom price alert logic, resulting in a **40% improvement** in user response time to market movements.
- **Optimized** MongoDB queries and containerized the application using Docker, achieving **50% faster data retrieval** and **99.9% uptime** on AWS EC2.

CERTIFICATIONS

AI Foundations Associate

Oracle Cloud Infrastructure • 2025

SKILLS

Programming Languages: Java, JavaScript (ES6+), TypeScript, Node.js, SQL, Python

Frontend: React.js, HTML5, CSS3, Bootstrap, Chart.js

Backend & APIs: Spring Boot, Express.js, RESTful APIs, JWT Authentication

Databases: MongoDB, PostgreSQL, MySQL

DevOps & Cloud: AWS (EC2, S3, Lambda), Docker, Kubernetes, Nginx, Jenkins

Tools & Platforms: Git, GitHub, Jira, Postman, VS Code, IntelliJ IDEA

Finance Domain Skills: Real-time transaction processing, portfolio management, financial data visualization, fraud detection, credit scoring logic
