

Sravani Bashuthkar

Java Full Stack Developer

+1(937)-563-0859 | bsravani215@gmail.com

EDUCATION: Master's in computer science, Campbellsville University, Kentucky, USA.

OBJECTIVE

Highly skilled Java Full Stack Developer with 5+ years of experience in designing, developing, and deploying scalable web applications. Proficient in Java, Spring Boot, Hibernate, and RESTful APIs for backend development and Angular, React, JavaScript, and TypeScript for dynamic frontend interfaces. Expertise in Microservices architecture, CI/CD pipelines, Docker, Kubernetes, and cloud platforms (AWS) to build efficient and high-performing applications.

PROFILE SUMMARY

- 5+ years of experience in designing, developing, and deploying scalable Java-based applications using **Spring Boot, ReactJS**, and **Microservices** architecture across industries.
- Proficient in Front-end technologies like **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, jQuery, AJAX, XML**, and **JSON**, ensuring responsive and interactive user interfaces.
- Expertise in backend development using **Java, J2EE, EJB, Servlets, JSP, JSTL, Custom Tag Libraries, JAX-RS, JDBC, JNDI, JMS**, and **JAXB**, ensuring secure and optimized server-side logic.
- Strong hands-on experience with **Spring Framework**, including **Spring MVC, Spring Boot, Spring Security, Spring JDBC, Spring Data JPA**, and **Spring Data REST**, for enterprise-grade applications.
- Skilled in implementing **Hibernate and JPA**, ensuring efficient database transactions, optimized query performance, and seamless data persistence in modern applications.
- Aptitude in developing **RESTful APIs** and integrating **microservices** using **Spring Boot, JAX-RS, and Express.js**, ensuring smooth inter-service communication and modularity.
- Practical experience in **ReactJS and NodeJS**, building interactive front-end components and handling asynchronous backend processing for high-performance applications.
- Proficiency in **CI/CD** automation using **Maven, Gradle, Jenkins, and Git**, streamlining code integration, testing, and deployment for efficient software delivery. Experienced in containerization and orchestration using **Docker and Kubernetes**, enabling seamless deployment, scalability, and management of microservices-based applications.
- Specialization in cloud platforms like **AWS (EC2, S3, Lambda, DynamoDB)**, optimizing application hosting, security, and data management in cloud environments.
- Knowledgeable in relational and NoSQL databases like **Oracle, MySQL, PostgreSQL, MongoDB, and Cassandra**, ensuring efficient storage and retrieval of structured and unstructured data.
- Accomplished in server-side development with **Express.js** and handling real-time asynchronous operations using **NodeJS**, improving backend responsiveness and efficiency. Proficient in unit testing and logging frameworks like **JUnit, Mockito**, and **Log4j**, ensuring software reliability, debugging, and maintaining high code quality.
- In-depth understanding of authentication and authorization mechanisms using **Spring Security, OAuth, and JWT**, securing applications against threats and vulnerabilities. Hands-on experience in server management and deployment using **Apache Tomcat, Nginx, and WebLogic**, optimizing application hosting, performance, and scalability.
- Skilled in performance tuning, debugging, and troubleshooting Java applications, identifying bottlenecks and optimizing execution for enhanced system efficiency. Experience in **Agile and DevOps methodologies**, working in cross-functional teams to ensure faster development cycles, continuous integration, and deployment efficiency.
- Passionate about learning emerging technologies and applying innovative solutions, continuously improving software development processes and application performance.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript, SQL, Python.
- **Frontend Technologies:** HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, jQuery, AJAX, JSON, XML, ReactJS, Redux, Angular, NodeJS, Express.js.

- **Backend Technologies & Frameworks:** Java, J2EE, Servlets, JSP, JSTL, Custom Tag Libraries, EJB, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Data REST, JPA, Hibernate, JDBC, JNDI, JMS, JAXB.
- **Databases & ORM:**
Relational Databases: Oracle, MySQL, PostgreSQL, SQL Server.
NoSQL Databases: MongoDB, Cassandra, DynamoDB.
ORM Tools: Hibernate, JPA, Spring Data JPA.
- **Web Services & APIs:** RESTful APIs, SOAP, JAX-RS, GraphQL, Postman, Swagger, OpenAPI.
- **Cloud Technologies & Services:** AWS (EC2, S3, Lambda, RDS, DynamoDB, API Gateway), AWS(AWS Functions, AWS Blob Storage, CosmosDB, AWS DevOps).
- **DevOps & CI/CD Tools:** Maven, Gradle, Jenkins, Git, GitHub, GitLab, Bitbucket, Docker, Kubernetes, OpenShift, Helm.
- **Testing & Logging Frameworks:** JUnit, Mockito, Selenium, TestNG, Cucumber, Log4j, SLF4J, ELK Stack.
- **Version Control & Build Tools:** Git, GitHub, GitLab, Bitbucket, Maven, Gradle.
- **Messaging & Event-Driven Architecture:** Apache Kafka, RabbitMQ, ActiveMQ.
- **Containerization & Orchestration:** Docker, Kubernetes, OpenShift.
- **Server & Application Servers:** Apache Tomcat, Nginx, WebLogic, JBoss, WildFly.
- **Agile & Project Management Tools:** JIRA, Confluence, Trello, Asana.
- **Development Methodologies:** Agile, Scrum, Kanban, TDD, BDD.

WORK EXPERIENCE

Client: Bath & Body Works, Reynoldsburg, Ohio, USA

Role: Java Full Stack Developer

Aug 2024 - Present

Description: Bath & Body Works is a leading global retailer specializing in personal care, fragrances, and skincare products. As a Java Full Stack Developer, I am working with Spring Boot, and ReactJS to provide a seamless omnichannel experience. It utilizes Aws Functions for serverless functions and CI/CD pipelines with Jenkins to enable scalable and automated application deployments.

Responsibilities:

- Developed dynamic and responsive web applications using **HTML5, CSS3, Bootstrap, JavaScript, TypeScript, jQuery, ReactJS, and AJAX** for an enhanced user experience. Used **Docker** and **Kubernetes** to containerize and orchestrate retail applications for scalable and efficient cloud deployment.
- Designed and implemented **RESTful APIs** and **microservices** using **Spring Boot, JPA, Hibernate, and JAX-RS**, ensuring seamless integration with front-end components. Developed and maintained server-side logic using **Java, J2EE, Servlets, JSP, JSTL, and EJB**, ensuring high-performance application processing.
- Worked with **Spring MVC and Spring Security** to implement authentication, authorization, and secure access control in retail applications. Integrated **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, and DynamoDB** to efficiently manage structured and unstructured data in large-scale retail databases.
- Implemented **JDBC, JNDI, and JMS** for data connectivity, message queuing and interaction between different retail system.
- Designed and implemented **CI/CD pipelines** using **Jenkins, Maven, Gradle, and Aws DevOps** to automate build, test, and deployment processes.
- Utilized **Spring Data JPA, Spring Data REST, and Spring JDBC** for efficient data access and retrieval from relational and NoSQL databases.
- Deployed and maintained applications on **Aws Cloud**, using **Aws Functions** for serverless execution and cloud-based scalability.
- Worked with **Log4j** and Apache for logging and monitoring, ensuring better debugging and application performance analysis. Created and managed custom tag libraries for JSP-based applications to promote reusable and maintainable UI components.
- Maintained and optimized message-driven architectures using **JMS, Kafka, and ActiveMQ** for real-time order processing and notifications.
- Utilized **Mockito** and **JUnit** for unit testing and test-driven development (TDD) to ensure application reliability. Developed scalable backend services using **NodeJS** and **Express**, ensuring high availability and low-latency transaction processing.
- Integrated **XML, JSON, and REST APIs** for third-party data exchange and communication within the retailer's ecosystem.
- Implemented **GraphQL APIs** for optimized data fetching and improved front-end interaction with backend services.
- Managed state management in React applications using **Redux** to improve performance in e-commerce applications.

Environment: Java, Spring Boot, ReactJS, NodeJS, Express, Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, Maven, Gradle, Aws, Jenkins, Docker, Kubernetes, Kafka, ActiveMQ, JUnit, Mockito, Log4j, CI/CD.

Client: CareSource, Dayton, Ohio, USA

Role: Java Full Stack Developer

July 2023 – May 2024

Description: CareSource was a leading insurance company providing Medicaid and Medicare services with a focus on managed healthcare solutions. As a Java Full Stack Developer, I built microservices using Spring Boot, Hibernate, and REST APIs and developed responsive UIs with ReactJS, TypeScript, and Bootstrap. I also deployed applications on AWS using Lambda, Docker, and Kubernetes, ensuring scalability and performance in insurance technology solutions.

Responsibilities:

- Developed and maintained insurance applications using **Java, J2EE, Spring Boot, and Hibernate** to ensure seamless policy management and claims processing. Designed and implemented **RESTful and SOAP web services** using **JAX-RS** and **JAXB** for integrating third-party insurance data providers.
- Created dynamic and interactive user interfaces with **HTML5, CSS3, Bootstrap, JavaScript, TypeScript, ReactJS, and jQuery** to enhance user experience. Designed relational and NoSQL databases such as **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, and DynamoDB** for storing customer and policy data.
- Developed backend services with **Spring MVC, Spring Security, Spring Data JPA, and Spring JDBC** to manage insurance data securely. Implemented **microservices architecture** using **Spring Boot** and **AWS Lambda** for scalable.
- Integrated **JSP, JSTL, Custom Tag Libraries, and Servlets** for building scalable, high-performance insurance applications. Developed **CI/CD pipelines** using **Maven, Gradle, Jenkins, and Git** to automate deployment and testing processes.
- Implemented authentication and authorization mechanisms with **Spring Security, JWT, and OAuth** for secure access to insurance portals. Wrote and executed unit and integration tests using **JUnit** and **Mockito** to ensure application reliability.
- Used **Apache Log4j** for logging and monitoring insurance application transactions and errors. Built and deployed cloud-native applications using AWS services such as **EC2, S3, DynamoDB, and Lambda** to support high availability.
- Developed messaging and event-driven solutions using **JMS, Kafka, and RabbitMQ** for real-time insurance claim processing. Integrated insurance applications with third-party APIs using **Ajax, JSON, XML, and RESTful** web services for seamless data exchange.
- Optimized database queries and indexing strategies to enhance the performance of insurance data retrieval operations. Implemented server-side caching mechanisms using Redis and Ehcache to improve application speed and efficiency.
- Worked with **Apache Tomcat and WebLogic** for deploying and managing enterprise insurance applications. Designed **role-based access control (RBAC)** for insurance portals to ensure data security and compliance.

Environment: AWS, AWS Lambda, Java, Spring Boot, Spring MVC, Hibernate, JPA, Maven, Gradle, ReactJS, NodeJS, Express, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, JUnit, Mockito, Log4j, Apache, CI/CD, JavaScript, TypeScript.

Client: Goldman Sachs, Bangalore, India

Role: Java Full Stack Developer

Sep 2020 – Nov 2021

Description: Goldman Sachs is a global investment banking and financial services firm that provides a wide range of services, including investment banking, asset management, and securities trading. As a Java Full Stack Developer, I developed and maintained scalable applications using Spring Boot, Hibernate, and RESTful APIs, and built dynamic front-end solutions with ReactJS, JavaScript, and CSS.

Responsibilities:

- Developed and maintained backend services using **Java, Spring Boot, and Hibernate** to ensure the efficient handling of banking transactions and business logic. This ensured secure and scalable banking operations.
- Designed and implemented **RESTful APIs** for seamless integration with external financial services, ensuring real-time data exchange between internal and third-party systems to enhance customer experience.
- Built dynamic, responsive user interfaces using **ReactJS, HTML5, CSS3, and JavaScript**, providing a user-friendly platform for customers to access banking services on multiple devices.
- Worked with relational and NoSQL databases such as **MySQL, PostgreSQL, and MongoDB**, ensuring secure, fast, and efficient storage and retrieval of sensitive banking data. This supported high-performance data operations.
- Integrated **AWS Lambda** for serverless computing, enabling rapid scaling of applications, and utilized **AWS EC2** to ensure reliable and cost-effective infrastructure for core banking services.

- Implemented secure authentication and authorization mechanisms using **Spring Security** and **JWT**, ensuring that only authorized users could access sensitive banking systems and perform financial operations.
- Optimized database access and queries using **JPA**, **JDBC**, and **Spring Data JPA**, improving system performance and reducing the response time for critical banking operations.
- Collaborated with cross-functional teams to design and implement **microservices architecture**, enabling efficient scalability of banking services and improving system reliability through containerization and orchestration.
- Conducted comprehensive unit and integration testing using **JUnit**, **Mockito**, and **Selenium**, ensuring that all application components were functioning as expected and met quality standards.
- Followed **CI/CD** practices using **Jenkins** and **GitLab**, automating the build and deployment pipeline to ensure faster and more reliable delivery of updates to production, improving system availability and stability.

Environment: Java, Spring Boot, Hibernate, RESTful APIs, ReactJS, HTML5, CSS3, JavaScript, MySQL, PostgreSQL, MongoDB, AWS Lambda, AWS EC2, Spring Security, JWT, JPA, JDBC, Spring Data JPA, microservices architecture, JUnit, Mockito, Selenium, CI/CD, Jenkins, GitLab.

Client: Medtronic, Bangalore, India

Role: Java Developer

Jun 2018 – Aug 2019

Description: Medtronic is a global leader in medical technology, specializing in the development of innovative medical devices and healthcare solutions. As a Java Developer, I focused on building scalable backend systems using Spring Boot, JPA, and REST APIs, while working with databases such as MongoDB, Cassandra, and DynamoDB. I leveraged Aws Functions and Docker for deploying applications, ensuring high availability and compliance with healthcare industry standards.

Responsibilities:

- Designed and built scalable, secure healthcare applications using **Spring Boot** and **Hibernate** to manage patient records and transactions efficiently. Ensure adherence to healthcare compliance standards such as **HIPAA** by implementing robust security measures. Work closely with stakeholders to define application requirements.
- Implemented secure and efficient **RESTful APIs** using **Spring MVC** and **Postman** for seamless integration between healthcare systems. Develop APIs to support interoperability between Electronic Health Records (EHR), insurance systems, and third-party applications. Ensure proper API documentation and versioning for long-term maintainability.
- Worked with **MySQL**, **PostgreSQL**, or **MongoDB** to store and retrieve electronic health records (EHR) efficiently while ensuring compliance with **HIPAA** regulations. Optimize database queries and indexing strategies to improve performance for large datasets. Implement database replication and backup strategies to ensure data reliability and disaster recovery.
- Used **OAuth 2.0**, **JWT**, and **Spring Security** to safeguard sensitive patient data and ensure access control in compliance with **HIPAA** and **GDPR**. Implement role-based access control (RBAC) to restrict user permissions and enhance data privacy. Conduct regular security audits and vulnerability assessments to ensure compliance with industry standards.
- Utilized **Apache Kafka** or **RabbitMQ** for event-driven architecture and real-time streaming of patient data across healthcare systems. Implement message queues to manage asynchronous communication between distributed services. Monitor and optimize message throughput to ensure reliable data exchange between healthcare applications.
- Deployed and maintained healthcare applications in cloud environments like **Aws Functions**, **Blob Storage**, and **Virtual Machines** to ensure high availability and scalability. Utilize **Aws Kubernetes Service (AKS)** to containerize and orchestrate microservices efficiently. Implement logging and monitoring solutions like **Aws Monitor** to track.
- Set up **Jenkins** or **GitHub Actions** for continuous integration and deployment of Java-based healthcare applications. Automate build, test, and deployment pipelines to enhance development efficiency. Configure automated rollback strategies to ensure application stability in case of deployment failures.
- Designed and developed microservices-based healthcare solutions using **Spring Cloud** and **Docker** for modular and scalable services. Implement inter-service communication using **gRPC** or **REST APIs** to ensure efficient data exchange. Optimize microservices architecture to reduce latency and improve system resilience.
- Writes and executed test cases using **JUnit**, **TestNG**, and **Selenium** to ensure reliability and robustness of healthcare applications. Implement automated testing frameworks to validate application functionality, security, and performance. Perform regression testing to verify that updates and patches do not introduce new issues into the system.

Environment: Spring Boot, Hibernate, Spring Security, OAuth 2.0, Apache Kafka, RabbitMQ, Aws Functions, Aws Kubernetes Service (AKS), Jenkins, GitHub Actions, Docker, JUnit, Selenium.
