SUMMARY

Software Developer with a solid background in computer science and over **5+ years** of experience in Java, Spring Boot, and Python, specializing in designing and implementing scalable solutions in agile environments. Proficient in developing high-performance web applications building RESTful APIs and leveraging cloud technologies like AWS and Azure.

SKILLS

- **Programming Languages:** Java, Python, C, C++.
- **Technologies and frameworks:** React, J2EE, Spring Boot, Spring, HTML5, CSS, Bootstrap, REST APIs, Microservices, Django, JUnit5.
- **Databases:** MySQL, MongoDB, PostgreSQL, Redis
- **Tools:** Maven, Eclipse IDE, Splunk, Git, Ant, SonarQube, JIRA, Ansible, Jenkins, IntelliJ, Bladelogic 12c, Oracle Database, Bitbucket, GitHub Actions, Terraform, Prometheus, Grafana
- **Cloud technologies:** Docker, Kubernetes, AWS (S3, EC2, DynamoDB, ECS, Lambda).

WORK EXPERIENCE

Software Engineer – Walmart

12/2024 - Current

- Contributing to the development of Walmart's Retail Supply Chain and Order Management System, a cloud-native enterprise application designed to optimize product inventory, checkout, and fulfillment workflows across global stores.
- Built and deployed Spring Boot Microservices with RESTful APIs for order lifecycle, cart management, and product availability using Java 17 and Spring Cloud Config.
- Implemented Kafka-based asynchronous messaging for real-time order status updates, event streaming, and transaction traceability.
- Developed interactive **React 18** front-end modules for internal dashboards supporting live order tracking and data visualization.
- Integrated services with AWS ECS, Lambda, DynamoDB, and S3, enabling serverless scalability and improved resource efficiency.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, and Docker, accelerating build and deployment cycles.
- Improved system reliability and observability using **Prometheus**, **Grafana**, and **CloudWatch** dashboards.
- Ensured robust authentication using **OAuth2/JWT** and applied role-based access controls for enhanced security compliance.
- Participated in **Agile ceremonies**, performed code reviews, and coordinated production releases with DevOps and QA teams to ensure 99% on-time delivery.

Software Engineer, Tata Consultancy Services – BOA

09/2019 - 08/2023

- Architected and developed the **EFORMS APR** workflow-based web application for US-based Bank employees using **React**, implementing a secure, scalable platform for accessing forms now live in twelve countries.
- Optimized contact import functionality, decreasing task completion time by 50% by leveraging **local storage** to reduce server calls while adhering to privacy policies.
- Developed a small POC to automate the revocation process in our application, where a REST WEB API was utilized to pull all the user access revoke request tickets. The POC code was designed to perform revocation by making necessary changes in the database for each request after which another API call was used to close all the revoke requests.
- To automate the whole process, the POC code has been integrated into **AutoSys** Job that runs 24/7 every 5 days a week. An alert job was also configured to send alerts for every successful/failed job run along with an output text file which allows for detailed analysis in case of failures.
- Drafted **DB Scripts** for data purging activity (a year-end activity performed to remove stale data older than specific no of years in the database) and had them successfully executed in production database with 0 defects.
- Responsible for analyzing, designing, coding, and implementing several application modules and maintaining Scheduled Jobs and Database. On-call support 24/7 for troubleshooting production issues. Took complete ownership of the several modules and reviewed the code of other team members for Production Deployments.

- Automated **CI/CD** pipeline tasks and API testing processes using **Jenkins**, reducing deployment and testing time by 50%.
- Investigated root causes of failed APIs using **Splunk** Enterprise, reducing downtime by 20%, and performed end-to-end debugging to ensure seamless functionality. Collaborated with QA teams to execute **functional, regression, and system integration testing**, achieving a 95% defect-free release rate.

PROJECTS

Trello-Inspired Project Management Tool

12/2023 – 03/2024

- Developed scalable backend services using Spring Boot and **Java** following the Model-View-Controller (MVC) design pattern for the project management platform.
- Optimized **SQL Server databases** for efficient CRUD operations, resulting in a 50% reduction in data retrieval time and enabling seamless data storage and retrieval.
- Applied **software design patterns** to build a user-friendly interface, resulting in a 40% increase in project efficiency and a 30% boost in team productivity.
- Participated in **peer-led code reviews** and implemented best practices in **unit and functional testing** to drive code quality.

EDUCATION

Wilmington University, New Castle, DE.

GPA 3.75/4, 08/2023 to 04/2025

Master of Science in Computer and Information Systems

Vignan University

GPA 3.89/4, 07/2016 to 05/2020

Bachelor of Technology in Computer Science and Engineering
