

GUILLERMO RUIZ-CAMAUER

PRODUCT MANAGER

PROFILE

Results-driven Product Manager with over 30 years of experience in software development and product ownership, adept at driving product strategy and delivering innovative IT solutions that enhance user experience and business outcomes. Proven ability to lead cross-functional teams and drive product strategy in dynamic environments. Able to lead change, congenial for working in teams, collaborative, a leader and a cool-headed problem solver, always seeking original solutions.

SKILLS

Project Management Methodologies

- Agile / Scrum / SAFe
- OKRs / KPIs
- Qualitative and Quantitative Research
- Roadmaps
- Customer Journey Mapping and Personas
- A/B Testing and Experimental Design
- Data-Driven Decision Making
- Innovation management

Scripting Languages

Python, Golang

Databases:

- SQL Server, PostgreSQL, Oracle, MySQL, PowerBI

Technologies

- IVR/Voip - Freeswitch / Asterisk
- PLC - Codesys / OPC UA / MQTT / NodeRED
- OS - MS Windows / Linux / MacOS
- Raspberry Pi

Other

- Azure DevOps / Polarion / JIRA / Miro / Figma
- Multicultural distributed teams
- GMP
- Software lifecycle (design/development/testing/maintenance)
- Market Research / Polls / Surveys

EDUCATION

Boston University 1989
MS Computer Engineering

Boston University 1988
BS Computer Engineering

CERTIFICATIONS

Innovation Management November 2023
Completed Innovation Management certification from Erasmus University Rotterdam, enhancing skills in product innovation and strategy.

Microsoft OKR Leadership Program January 2023
Completed the Learning Path for becoming a OKR Champion with Viva Goals.

Professional Scrum Product Owner (PSPO I) December 2022
Achieved Professional Scrum Product Owner (PSPO I) with a focus on technical product management and Agile best practices, ensuring alignment between technical capabilities and market needs.

SAFe Training – Sartorius internal August 2022
Introduction to SAFe – Internal week-long training on the basic concepts of SAFe and Application Release Trains.

Agile Conference 2022 – Nashville, TN July 2022
Participated in a multi-day conference – Organized by the Scrum Alliance, this is the leading conference on everything Agile. Attended several talks including Story Mapping, DevOps Metrics and User Story Estimation.

LinkedIn Learning - Software Project Manager September 2021
Learning path with ~20 hours of classroom time in 12 courses. Covering: Jira, DevOps foundations, Agile Testing, Scrum.

LinkedIn Learning - Agile Project Manager May 2021
Learning path with ~12 hours of classroom time in 9 courses. Covering: Agile Project Management, Microsoft Project, Project Management.

LinkedIn Learning - Agile and Project Management May 2021

- Agile Foundations
- Agile Project Management: Comparing Agile Tools
- Agile Project Management with Microsoft Project
- Leadership Foundations
- Communication within Teams

CAREER SUMMARY

Sartorius North America **2021 - Present** **Product Owner Software Innovations**

Product Owner for an innovative system for aseptic sample extraction from bioreactors for analysis. Led the development of a comprehensive solution that integrated five different physical instruments, two of which were from external partners. The system automated the processes of extraction, sample preparation (dilution, filtration, storage), and analysis of samples, ultimately enhancing operational efficiency and data accuracy in bioprocessing. Managed more than 15 projects in the Biopharma/Biotech space in an Agile Scrum environment as part of the Software Enabling team and later the Digital Innovations team. Gathered requirements and drafted User Requirement Specifications for several products. Conducted market research to evaluate and integrate new software tools and technologies into product offerings, enhancing overall user experience and functionality. Developed customer journey maps and personas that guided product strategy and design decisions across cross-functional teams.

Julio Aurelio S.A. - ARESO **1991 - 2021** **Senior Product Manager**

Product Manager at ARESO for an IVR based polling system. Conducted market research to understand the needs of our target users, including political organizations, candidates, and pollsters. The information gathered allowed me to create a clear roadmap that aligned with both user requirements and business objectives. Defined the product vision and strategy, starting with a PoC system with just 8 analog lines. Collaborated closely with cross-functional teams, including engineering, data analysis, and sociologists. Facilitated regular meetings to ensure everyone was aligned and that we were addressing any technical challenges promptly. The automated polling system was a major success, not only in terms of user adoption but also in its impact on electoral predictions. Its ability to efficiently gather and analyze data transformed how the organization approached polling, enabling it to make much quicker and more informed decisions. The system's success in predicting electoral outcomes enhanced the company's reputation in the industry and led to increased demand for its services. It also significantly lowered the cost of providing services. Scaled the system from the original 8 analog lines of the PoC to over 5300 phone lines (both E1 trunks and Voip channels). Architected and developed RESTful interfaces with Salesforce to allow for tight integration between the two platforms. Responsible for the entire product lifecycle (design / development / testing / maintenance). Led the company's transition from paper-based processes to fully automated digital solutions, resulting in increased efficiency. Established and nurtured relationships with IT vendors. Negotiated and administered subcontractors, outsourcing and consulting service agreements in a cost-effective manner.

McLean Technology Group (ARESCO SW Division) 1990-2018 **Product Owner**

Managed client relationships, conducted business analysis, software/solution architecture, and development team leadership. Formulated project proposals to clients, handled negotiations, hired and mentored employees, and drove delivery of major IT projects and end-user services. Researched and selected new technologies. Utilized Waterfall and later Agile methodologies (Scrum) as a Product Owner. Led the company in delivering custom solutions in many fields for clients including Unilever, Reuters, Clorox, Argentine Chancery and State Departments, PNUD, Telefónica, US Trade and Development Program, and Banco Santander. Led the company's participation in notable projects in Argentina such as the first CD-ROM edited in Argentina (jurisprudence, full-text search), the largest MS-SQL database at the time (telephone traffic analysis), regional import-export data (CD-ROM and online with full text retrieval); IVR, intranet and an ESB development for the principal local bank (Santander); an advanced system for technical trading based on Reuters and Bloomberg data feeds.

Cambridge Technology Group **1989 – 1990** **Technical Team Leader**

Later known as Cambridge Technology Partners. Worked on projects for Owens Corning Fiberglass and Andersen Windows. Primarily used C, HyperCard and shell scripting.

Boston University Center for Space Physics **1987 - 1989** **Research Assistant**

Designed and implemented an intensified video imaging system used for ionospheric research. Studied the Aurora Borealis phenomenon and the effect of certain chemical agents on the ozone layer. Coordinated the launch of two Terrier-Malamute rockets from NASA's Goddard Space Flight Center, from which chemical agents were released into the atmosphere and imaged through the system to study the effects on the ozone layer. The system was later permanently installed at the North Pole and Pacific Islands. Image processing using Sun workstations and the IDL language.
