SUMMARY

Backend Java Developer with **5+ years of experience** building distributed systems and microservice architectures using **Java, Spring Boot, and Spring Cloud**. Experienced in developing **enterprise and e-commerce platforms** with event-driven pipelines, real-time APIs, and asynchronous processing using **Kafka**. Skilled in deploying applications on **AWS** with **Docker, Kubernetes, Jenkins, PostgreSQL, and Redis**, focusing on clean code and reliable performance under heavy load. Implemented monitoring and automation pipelines that **cut system downtime by 35%** and improved deployment stability across production environments.

EXPERIENCE

DXC TECHNOLOGY

Jan 2025 - Current

Backend Java Developer - Enterprise Workflow Orchestration & Integration Platform for DXC

- Designed core orchestration engine in **Java (Spring Boot, Spring Cloud)** to route, transform, and process enterprise workflows across internal systems (ERP, CRM, billing), supporting **5000+ concurrent transactions per minute**.
- Implemented **RESTful and message-driven APIs** with Spring WebFlux and Spring Cloud Stream (Kafka), enabling event-based communication and decoupling subsystems; reduced latency in cross-system calls by ~35%.
- Created modular connector services in Java to integrate with legacy SOAP systems, external partner APIs (JSON/XML), and file-based batch interfaces; maintained an abstraction layer so new systems could plug in easily.
- Orchestrated deployment of microservices via **Docker + Kubernetes (EKS or AKS depending on client region)** with blue-green deployment and auto-rollback; ensured zero downtime during upgrades and improved release safety.
- Built observability stack (**Micrometer + Prometheus + Grafana + ELK**) to monitor Java GC behavior, thread pools, API latencies, error rates, and service health; introduced alerting thresholds that caught anomalies early and reduced MTTR by 40%.
- Developed data persistence and stateful workflows using **PostgreSQL** and **Redis (for caching & state store)**, with careful transaction management and distributed locking to prevent consistency issues under high concurrency.

ADONS SOFTECH

May 2020 - Jul 2023

Java Developer - E-Commerce Order Processing and Inventory Management System

- Engineered a **Core Java-based backend platform** handling real-time order processing, stock synchronization, and invoice generation for 100K+ daily transactions across multiple regional warehouses.
- Developed **Spring Boot microservices** for order lifecycle management, cart validation, payment authorization, and shipment tracking; achieved 40% faster response time compared to the legacy monolith.
- Built **asynchronous event pipelines** using **Apache Kafka** to decouple order creation, inventory update, and billing workflows, ensuring data consistency even under high load.
- Designed **JPA/Hibernate-based data access layer** with optimized query caching and indexing on **MySQL + Redis**, cutting average DB query latency by 55%.
- Deployed microservices on **AWS ECS** with Docker, managed configuration through AWS Systems Manager Parameter Store, and automated CI/CD using Jenkins pipelines.
- Integrated **RESTful APIs** for third-party logistics and payment gateways, implementing retry logic and circuit breakers (Resilience4j) for fault-tolerant communication.
- Implemented **centralized monitoring** via ELK Stack and CloudWatch metrics, adding real-time alerts on transaction delays and API failures, reducing incident resolution time by 30%.

SKILLS

Programming & Java Technologies: Core Java, J2EE, Spring Boot, Spring Cloud, Spring MVC, Hibernate, JPA, JSP, Servlets, JDBC, RESTful APIs, Microservices, Design Patterns, Exception Handling, Multithreading, Apache Kafka, JMS, Python (FastAPI, PySpark, Pandas, NumPy, Scikit-learn, PyTorch, and XGBoost), Node.js, Express.js

Frontend Development: React.js, TypeScript, Next.js, Redux, GraphQL, WebSockets, Material UI, Responsive UI Design

Cloud & DevOps: AWS (ECS, S3, CloudWatch, Lambda, EMR), Azure, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD Pipelines, Blue-Green Deployment, Auto Scaling, Jira

Databases & Caching: PostgreSQL, MySQL, Redis, Query Optimization, Indexing, Connection Pooling, Stored Procedures, Transaction Management, Hibernate ORM, Oracle, MongoDB

System Integration & Messaging: Spring Cloud Stream, Kafka Topics, REST & SOAP APIs, Resilience4j, Batch Jobs, Event-Driven Architecture, API Gateway Integration, Asynchronous Queues

Monitoring & Performance: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Micrometer, JVM Profiling, CloudWatch Metrics, Thread & Memory Monitoring, Application Health Dashboards

EDUCATION

The George Washington University
Master of Science in Computer Science

May 2025
Washington D.C.
