

Daniel Lopez Senior Software Engineer

✉ daniellopezcoder@gmail.com ☎ 904 341 5199 📍 Tampa, FL

Summary

- **Results-driven Software Engineer** with 8+ years of experience designing, developing, and optimizing web applications across various industries.
- **Deep understanding of the Software Development Life Cycle (SDLC)**, with expertise in planning, specification reviews, documentation, scheduling, design, development, testing, implementation, and maintenance of applications.
- **Proficient in modern web architectures** like **n-tier applications** and **microservices**.
- **Skilled in multiple programming languages**, including **JavaScript, TypeScript, Python**, and **Node.js**, with extensive experience using modern frameworks like **Django, React.js, Angular, Express.js**, and **Flask** to deliver maintainable software solutions.
- Expert in developing **RESTful** and **GraphQL APIs**, enabling seamless communication between frontend and backend systems.
- Specializes in **front-end** development focused on creating intuitive and dynamic user experiences, while also building reliable **backend** systems for smooth data flow and integration.
- Strong database management skills, including hands-on experience with **MySQL, PostgreSQL, MongoDB**, and **DynamoDB**, to handle complex data infrastructures with integrity and efficiency.
- Experienced with Data ETL pipelines, leveraging **PySpark, Databricks, Snowflake** and **Apache Airflow**.
- In-depth experience with **AWS cloud technologies**, ensuring applications are optimized for performance, scalability, and cost-efficiency.
- Well-versed in testing using **Jest, PyTest** and **React Testing Library** to ensure high code quality and reliability.
- **Experienced with CI/CD pipelines**, leveraging **Jenkins** and **GitHub Actions** for continuous integration, automated testing, and seamless deployments.
- Proficient in **Git for version control**, utilizing **GitHub** for code reviews, branch management, and continuous delivery workflows.
- **Agile team player**, experienced in Scrum methodologies, participating in daily standups, sprint planning, user story reviews, and retrospectives to deliver high-quality features in iterative cycles.

Skills

Languages — Python, C#/.NET, JavaScript, Typescript, HTML, CSS, SQL

Frameworks & Libraries — React.js, Node.js, Express.js, Angular, Django, Flask, Apollo GraphQL, jQuery, Ajax, Numpy, PySpark, Pandas, Apache Airflow, Databricks, TypeORM, Mongoose, ElectroDB,

Databases — MySQL, PostgreSQL, MongoDB, DynamoDB

Tools — Jira, Trello, GitHub, Docker

Others — Webpack, Vite, GraphQL, ESLint, RESTful API

Clouds — AWS (Lambda, CloudWatch, CloudFormation, DynamoDB, SNS, SQS, EC2, S3, Kinesis, CloudFront and so on), Azure (VMs, Azure functions, Azure DNS, Azure App Service)

Methodologies — SDLC, Agile, Scrum, TDD

Operating Systems — MacOS, Windows, Linux

Soft Skills — Customer focus, Attention to detail, Strategic thinking, Taking initiative, Continuous Learning

Professional Experience

Senior Software Engineer, *uShip*

Jan 2024 – Present | Austin, TX

Transformed a legacy **C#** monolith system into a modern serverless microservices architecture using **AWS Lambda**, **TypeScript**, and the **Serverless framework**, improving scalability and maintainability.

- Leveraged **DynamoDB** as the primary database, optimizing for performance and scalability within the serverless environment.
- Utilized the **ElectroDB** library for efficient modeling and interaction with **DynamoDB**, streamlining complex queries and operations.
- Led the migration of a monolithic admin system to a modern stack with **React.js** on the frontend and **TypeScript/Node.js** on the backend, deployed with **AWS Lambda** for a fully serverless approach.
- Implemented **Apollo GraphQL** for seamless communication between the admin frontend and backend, reducing over-fetching and improving API performance.
- Designed and **optimized** data models to handle and retrieve **large datasets** efficiently, improving overall system performance.
- Implemented **SQS** for smooth message queuing, ensuring reliable and scalable message processing across microservices.
- Set up **Dead Letter Queues (DLQ)** to capture and safely handle failed messages, ensuring no data loss and reliable processing.
- Integrated **PagerDuty** for proactive alerting and incident management, reducing system downtime and improving response times.
- Served as Subject Matter Expert (**SME**) for third-party carrier verification API integrations, improving service reliability and customer success.
- Integrated **Okta** for admin authentication using **OAuth**, providing secure and streamlined access control.
- Managed **JWT** tokens for secure, stateless authentication across the platform, ensuring a smooth user experience and security.
- Implemented **Cloudflare** as a **CDN**, boosting global accessibility and reducing latency.
- Configured and managed Cloudflare using **Terraform**, enhancing infrastructure automation and scalability.
- Integrated the **ELK Stack** for centralized logging, real-time monitoring, and data visualization, enabling faster troubleshooting and system insights.
- Automated **CI/CD pipelines** using **GitHub Actions**, deploying across 4 environments (dev, QA, sandbox, production). Managed the infrastructure with Terraform, ensuring stability and minimizing risk throughout the development lifecycle.

Full Stack Engineer, *IronNet*

Oct 2020 – Nov 2023 | McLean, VA

Developed a scalable **multi-tenant SaaS platform** for cybersecurity threat detection, focusing on high-availability, security, and scalability.

- Built interactive **UI components** using **React** and **TypeScript**, creating a responsive and engaging user experience.
- Managed state efficiently with **Redux Toolkit Query**, handling API requests and implementing effective caching strategies.
- Implemented **real-time data visualization** for threat analytics using WebSocket and Redux, ensuring smooth state management and fast updates.
- Built couple of **serverless microservices** using **AWS Lambda**, optimizing for cost-efficiency and scalability.
- Integrated **DynamoDB** for handling high-volume, low-latency transactional data, optimizing read/write performance for real-time processing.
- Developed real-time **data analytics pipelines** in **Python**, enabling fast, reliable threat detection and efficient data processing using **Apache Airflow** and **Databricks**.

- Built a robust **admin application** using **Django**, enabling internal teams to manage multi-tenant configurations, user roles, and access controls.
- Developed **RESTful APIs** using **Django REST Framework (DRF)**, allowing admins to manage cybersecurity data, track system performance, and generate user activity reports. Ensured secure access to admin APIs with **JWT-based authentication** and role-based permissions.
- Utilized **Django ORM** to interact with **PostgreSQL**, implementing optimized queries for large datasets to support real-time analytics and admin data insights. Automated periodic data cleanup and migration processes using **Django management commands**.
- Containerized backend services using **Docker**, enabling seamless integration with **CI/CD** pipelines for automated testing and deployment.
- Implemented unit and integration tests using **Jest** and **React Testing Library** for the frontend, **Jest/PyTest** for backend functions.
- Set up comprehensive logging with **AWS CloudWatch** and **Elasticsearch**, capturing real-time logs and metrics for debugging and monitoring.

Full Stack Developer, McKinsey & Company

Jul 2018 – Oct 2020 | Dallas, TX

Developed and maintained a scalable eCommerce platform using **React** for the frontend, ensuring a responsive and user-friendly interface that adapted to different devices.

- Designed and implemented a **microservices** architecture using **Node.js** with **Express.js**, boosting modularity and maintainability of the entire application.
- Utilized **MongoDB** as the primary database, leveraging **Mongoose** as an **ORM** to streamline data handling and enforce schema validation.
- Integrated **RabbitMQ** as a message broker for efficient communication between **microservices**, improving system reliability and message handling performance.
- Led the integration of **Stripe** as the payment processor, reducing transaction errors and enhancing overall **payment** reliability and user trust.
- Conducted thorough testing and validation of payment flows, ensuring **PCI** compliance and meeting security standards for safe, reliable transactions.
- Developed a real-time reporting and analytics microservice using **Python Flask**, using libraries such as **Pandas** and **NumPy** for data manipulation and analysis.
- Implemented a **dynamic pricing engine** that adjusted offers in real-time based on user activity and inventory levels, leading to increased conversions during peak periods.
- Introduced **Docker** for containerization, simplifying the development and deployment pipeline across multiple environments.
- Created a full **backup** script for the **MongoDB** database using **Python**, ensuring data integrity and smooth recovery during system updates and maintenance.
- Automated CI/CD pipelines using **Jenkins**, streamlining the **build** and **deployment** processes, resulting in faster, more reliable releases.
- Integrated **Datadog** for real-time system monitoring, reducing downtime and proactively identifying performance issues.

Frontend Developer, Unique Software Development

Nov 2016 – Jul 2018 | Dallas, TX

Developed and maintained web applications using React and JavaScript (ES6/ES7).

- Implemented **State management** solutions using **Redux** and **Context API**, ensuring seamless data flow and performance optimization.
- Enhanced user experiences by utilizing **HTML5**, **CSS3**, and **SASS/LESS** for responsive and adaptive designs.
- Worked on **Server-Side Rendering (SSR)** for improved **SEO** and load times, leveraging **ReactDOMServer**.
- Conducted **A/B testing** using tools like **Optimizely** and **Google Optimize** to drive data-driven decisions and optimize conversion rates.

- Integrated SEO best practices, improving web application visibility and search engine ranking.
- Consumed and integrated **RESTful APIs**, collaborating closely with backend teams to fetch and display dynamic data. Ensured smooth API communication using **Axios** and native **Fetch API**, handling asynchronous operations effectively.
- Wrote and maintained **unit tests** for React components using **Jest** and **Enzyme**, ensuring high code quality and reducing regression issues.
- Performed **end-to-end testing** with **Selenium** and **Cypress** to ensure full application functionality and a seamless user experience across all flows.
- Collaborated on legacy systems using **Angular** for specific feature development and migration projects.
- Worked with **Webpack** and **Babel** for bundling and transpilation, ensuring cross-browser compatibility.
- Actively participated in **code reviews** and **agile sprint ceremonies**, contributing to continuous improvement and best practices adoption.

Education

Concordia University Texas,
Bachelor's degree in Computer Science

Sep 2012 – May 2016 | Austin, TX

Certificates

AWS Certified Cloud Practitioner [↗](#)

AWS Certified Solutions Architect - Associate [↗](#)

AWS Cloud Technical Essentials [↗](#)
