Portfolio: [Mobile App Portfolio](#)

Highlights

- Passionate developer with experience with iOS & Android Mobile development
- Extensive experience with User Interface Design
- Experience with Xcode and Android Studio
- Experience with SwiftUI and exposure to Jetpack Android Compose
- Experience with full stack web development: ASP.NET MVC and Web Forms
- Innovative and very analytical thinker
- Experience with developing native mobile Android & iOS layouts.
- Strong written and verbal communication skills
- Proven ability to release quality products on time
- Experience working on a distributed team
- Dependable, self-motivated, detail oriented
- Excellent problem solving skills and a quick learner.

Technical Proficiencies:

- Xcode & Android Studio
- Google Analytics & Firebase
- SwiftUI and Android Compose
- Visual Studio, C#, .NET
- HTML, CSS, JavaScript, jquery
- Ninject & Unity
- Unit Test Development
- Elmah & nlog logging frameworks
- VeraCode
- Microsoft Office Suite
- Swift, Kotlin, Java, Objective C
- REST APIs & JSON
- TestFlight & Google Beta
- Entity Framework, LinqPad
- Knockout
- SQL Server Profiler
- Enterprise Library
- MVC
- Perfecto Mobile
- Oracle
- SQL Server Profiler
- iOS and Android SDKs
- GIT, SourceTree, TFS
- UI Design
- Microsoft SQL Server
- Resharper
- Xamarin Studio & App Center
- XML
- Layered Application Architecture
- ASP.NET Web Forms
- Photoshop

Professional Experience

PetSmart (Contractor)

Senior Mobile Engineer

9/23 – 2/25

Designs and Develops iOS and Android native applications used for retail. Highly proficient with iOS and Android development. Gained experience with Swift, SwiftUI, Xcode, Kotlin, Android Compose, Android Studio and modern threading concepts. Helped team with creating and updating user stories. In addition also contributed to application architecture and creating stories for future architectural refinements. Worked with product to ensure consistent usability for new features. Created reusable components for use throughout mobile app. Created multiple innovations of which one of them made it into the apps.

Ontada (McKesson)**Senior iOS Developer****1/22 – 8/23**

Designs and Develops HIPAA compliant EHR iOS native applications used for Health Care. Highly proficient with iOS development. Gained experience with Swift, SwiftUI, Xcode and modern threading concepts using async await. Helped drive feature enhancements and tech debt stories for the team. Worked with UX by prototyping, evolving, and developing solutions to improve usability for new features. Created reusable components for use throughout mobile app. Created Android prototype using Android Jetpack Compose, Kotlin and Android Studio.

Nautilus. Vancouver, WA**Senior App Developer (Tech Lead)****3/21 – 12/21**

Designs and Develops Android, iOS native applications. Highly proficient with Swift, Kotlin, Java, Xcode and Android Studio including utilizing native UI layouts. Full app life-cycle: concept, UI design, architecture, build, deploy, test and release to app & play stores. Experienced with UI design and driving usability improvements. Proficient with iOS Storyboards, Android layouts, iOS & Android SDKs.

Blink. Phoenix, AZ**Senior Mobile Developer (Lead)****2/18 – 2/21**

Lead developer for mobile applications. Designs and Develops Android, iOS native applications. Highly proficient with Swift, Kotlin, Java, Xcode and Android Studio including utilizing native UI layouts. Full app life-cycle: concept, UI design, architecture, build, deploy, test and release to app & play stores. Experienced with UI design and driving usability improvements. Proficient with using native hardware capabilities such as: photo acquisition, mapping, biometric authentication APIs. Experienced with Google & Apple mobile technologies such as Maps & Places APIs. Added analytics using Google Firebase. Proficient with performance tuning apps through profiling. Proficient with iOS Storyboards, Android layouts, iOS & Android SDKs. Keeps up-to-date on current and upcoming features in relevant products and platforms.

HomeSmart. Scottsdale, AZ**Mobile Application Developer****11/16 – 5/18**

Designs, Develops & Prototypes Android, iOS native customer applications for phones and tablets. Highly proficient with Xamarin and xcode including utilizing native UI layouts. Full app life-cycle: concept, design, build, deploy, test and release to app & play stores. Work with product teams on new product ideas, designs, prototypes and estimates. Proficient with using native hardware capabilities such as photo acquisition, mapping, biometric authentication, and voice APIs. Experienced with Google & Apple mobile technologies such as Maps & Places APIs. Proficient with performance tuning apps through profiling. Actively develops mobile unit tests and setup DI. Keeps up-to-date on current and upcoming features in relevant products and platforms. Proficient with iOS Storyboards, Android layouts, iOS & Android SDKs.

Brookfield. Scottsdale, AZ**Senior Software Engineer (Mobile)****11/13 – 11/16**

iOS and Android Mobile Development for relocation services management apps (primary role). Gained mobile development experience with Xcode, Android Studio, and Xamarin (native & Xamarin). Added features for managing messages, expenses, and documents. Added support for Google Translate and Push Notifications. Primarily mobile development at this position. Setup Development Wiki for sharing knowledge and processes. Web Forms application development for an application used for Cost Estimating. I incorporated jQuery into the web application to modernize the implementation along with modernizing the look & feel. SharePoint web application development, mostly SQL related changes. Developed mobile unit tests and setup DI using Unity,

Edgenuity. Scottsdale, AZ**Senior ASP.NET Engineer****12/12 – 11/13**

Development of a tablet compliant ASP.NET MVC and Web Forms applications used for online training. Implemented editing functionality for writing essays and notes using CKeditor, Web API, knockout, and MVC.

Implemented usability improvements including tablet compliance and updated the look & feel of the Student Experience. Implemented tablet compliant player functionality (html5 with flash fallback) using jPlayer. Created a custom design for the player that was approved by UX team without changes. Developed a Login MVC Web Application used for authentication.

Manpower. Tempe, AZ

Senior Software Engineer

3/12 – 12/12

Development of an ASP.NET Web Forms application for Vendor Management. Design and Development of a layered architecture for incorporating Entity Framework into an existing web application. Developed a utility for automating resourcing web pages/user controls for globalization. Gained experience with Entity Framework, Repository & Unit of Work Patterns while developing an EF framework.

American Traffic Solutions.
Scottsdale, AZ

Senior Software Engineer

1/10 – 3/12

Development of an ASP.NET Web Forms application for managing users permissions. Enhanced an Accounting Web Forms application. Work with end users to gather requirements, discuss and present UI design. Development of a Win Forms application used to generate Html used as Web Help. Developed an ASP.NET application for displaying WebHelp.

eInstruction. Scottsdale, AZ

Senior Software Engineer (Lead Role)

7/07 – 5/09

Development on a [digital teaching program](#) for use in classrooms using Visual Studio .NET/C#, C++ and Java. Developed User Interface enhancements and backend database for content. Refactored database implementation for the Gallery. This resulted in large performance gains, improved architecture, and code reduction/complexity. Added support content in an XML format. Developed new versions of a [Content Gallery](#) using .NET and Java. Enhanced skills with .NET, C#, Win Forms (Windows Forms), Win32, MFC, GDI, Java, db4o object database, Infragistics, Jira. Added product features such as: Math Tools, Office Interoperability, PowerPoint like transition effects, image acquisition, PDF importer, and Content Gallery.

Netpro. Phoenix, AZ

Senior Software Engineer

10/04 – 7/07

Responsible for product UI design and implementation since initial product release for a Windows multi-tier enterprise [security application](#) using Visual Studio .NET/C#, Win Forms (Windows Forms) and SQL Server. Developed a SRS (SQL Reporting Services) application for Active Directory as well. Primary work involved in the presentation tier. Large contributor to product features and application behavior.

Riverdeep Inc (formerly Mattel).
Novato, CA

Senior Software Engineer
(Project Lead)

2/02 – 11/03

Lead developer for a Windows [Video Editing Application](#). Added new features to Consumer Products using C++ with Visual Studio .NET. Developed various classes and controls using C# and Visual Studio .NET used for displaying thumbnail images, image scaling, and video playback. Added XML based skinable capability to a .NET application and developed a resource editor used for creating skins. Developed classes used for VCD and CD burning using C++ and C#. Developed .NET managed code wrappers for interfacing from a .NET application to an unmanaged code base. Gained experience with DirectShow, video codecs, XML, product localization. Produced documents on technical analysis of various SDKs and CD burning products. Produced schedules and managed a team of up to three developers. Light Win Forms (Windows Forms) development.

Developed measurements software for testing instrumentation using the Visual C++ development environment, COM, ATL, and Perl. Implemented code for hardware control, remote I/O, measurement algorithms and instrumentation GUI. Developed various utilities, applications, and processes to help improve team productivity and code modularity. Designed and developed a dependency tool used for retrieving a software component's dependencies from SourceSafe, which greatly reduced the complexity of retrieving the latest components. Implemented using SourceSafe OLE Automation. Designed and developed a data driven class interface and Access database used for returning instrument feature capabilities along with measurement solution information. Gained experience working with signal sources, frequency counters, volt meters, and power meters. Developed a FTP utility used for backing up instruments.

Developed [American Greetings](#) line of print productivity products using Visual C++. Added user interface elements using MFC. Designed and developed a data driven scalable user interface which scales interface artwork to the current display resolution along with databases used for storing interface art and layout information. Designed and developed a SKU configuration utility that allowed the capability to produce many products with different feature sets and skins without code changes. Developed the Connection Manager ActiveX control used to establish an Internet connection so an application can proceed with sending/retrieving information with the Internet. Developed the Connection Manager using object-oriented concepts with C++, WinSock API, RAS API, Win32 API, and Multi-threading. Developed compression and spell checking COM servers. Produce schedules using Microsoft Project and managed a team of four developers. Heavy contributor to product User Interface design.

Enhanced the print productivity application *PrintMaster*. Added web publishing support. Gained extensive knowledge of HTML, WinINet API, WinSock and some exposure to JAVA. Added user interface enhancements using MFC. Improved product performance by identifying problem areas using the Visual C++ profiler then re-designing and re-writing relational database engine. Developed resource management classes. Added twain (scanning) support.

Developed commercial multimedia reference software products (full project life cycle). Gained experience with programming for: audio and video playback, image presentation, custom controls, and relational databases. Involved in many aspects of creating the products which includes: program architecture, extensive programming of user interface and relational database system (using Visual C++, MFC, Windows API), scheduling, coordination and integration of program content; worked with marketing and third parties; prepared documentation on program architecture; worked with testers in resolving any issues. Supervised a staff of up to five developers.

Education

Control Data Institute. Bensenville, IL
Major: Computer Programming and Operation
Degree: Certificate in Computer Programming
GPA: 94% - Graduated with Honors

4/85 – 10/85

College of DuPage. Glen Ellyn, IL
Major: Engineering
Degree: Associates in Science

7/81 – 8/84

Portfolio

I advocated that the new Pharmacy Search feature use one address field instead of multiple fields at Ontada. Worked with UX on a simplified design. Implemented client side address parsing into components (taking single address input field and splitting into components) to achieve the goal of a simplified user experience.

HomeSmart app iPhone Screenshots

I was responsible for UI Design as well as developing the apps.

HomeSmart app iPad Screenshots. Find Homes was optimized for a tablet experience.

Mobile Screen shots of Brookfield app

This screen shot above the Essay feature that I worked on at Edgenuity. It used knockout, JavaScript, MVC, Web API, and EF with a SQL Server backend. I developed a knockout base class for the Student and Teacher experience, base layout and partials for design reuse since the Teacher and Student workflow had very similar experiences with the teacher having limited functionality such as a read only view of the essay along with a different bottom tray. The word count dynamically updates using knockout as well as the UI controls. The screen shot below shows how the tray functionality varies depending upon whether the essay has been submitted.
