

Denzil Villarico – Senior Full Stack Developer

Java | Spring Boot | React | JavaScript | TypeScript

denzilsv82@gmail.com | (321) 241-2475 | Spring Hill, FL |

<https://github.com/denzil1231> | <https://www.linkedin.com/in/denzil-villarico-561811123/>

Professional Summary

Accomplished Full Stack Developer with over 10 years of experience in designing, developing, and optimizing robust platforms across various industries. Expertise in enhancing e-commerce functionality, streamlining service rate comparisons, and advancing consumer credit management systems through the effective use of modern technologies and frameworks. Known for a strong commitment to delivering high-quality user experiences and driving project success through innovative solutions and a detail-oriented approach

Technical Skills

Backend:

Java, Spring, Maven, Spring Boot, JPA, J2EE, Hibernate, JUnit, Spring Cloud, Spring MVC, Microservices, Spring-based, AWS, CI/CD, Kafka, Kubernetes, Docker, Jenkins, JDBC, MVC, JSP, Agile, Scrum, Git, Version Control, OOP, Unit test, Mockito, SDLC, Eclipse, IntelliJ IDEA, Multithreading, Object-oriented, REST, Python.

Frontend:

React, JavaScript, Typescript, HTML, CSS, Redux, Angular, Figma, Gatsby, Bootstrap, OAuth, REST APIs.

DB & Devops:

Oracle, MySQL, SQL, PostgreSQL, Relational database, MongoDB, NoSQL, Cypress, Version Control, JDBC, OAuth, CI/CD, AWS, Kubernetes, Docker, Git, JUnit, Jira, Agile/Scrum

Work Experience

St Fine Tech | Irvine, CA

May 2018 - Feb 2025

Senior Full Stack Developer

- **Project 1: Shiptime**

<https://app.shiptime.com>

ShipTime is an online shipping platform that helps businesses streamline the entire shipping process. I created a user-friendly interface for creating and managing shipments, printing labels, tracking packages in real time, and accessing shipping analytics—all in a centralized dashboard. During my tenure as a Senior Java Developer at ShipTime, I played a key role in architecting and implementing core features of the company's shipping and logistics platform. I helped design and maintain microservices that handle critical business functions such as label generation, real-time shipment tracking, and rate calculations. These services were developed using Java (primarily with Spring Boot), allowing for modularity, ease of maintenance, and scalability. I led the development of RESTful APIs that integrate with leading shipping carriers and external systems. This included crafting secure endpoints for customers to access shipping rates, schedule pickups, and monitor real-time delivery statuses. I also worked extensively on authentication and authorization mechanisms to ensure that data remained protected at all stages.

- **Project 2: Picanova**

<https://www.picanova.com>

Picanova is a global leader in personalized wall art, photo printing, and home decor products. I helped this company create an online platform where customers can upload their photos to create custom canvases, framed prints, posters, and a broad range of other personalized items.

Working as a Senior Java Developer at Picanova, I was responsible for architecting, developing, and maintaining critical components of the company's e-commerce solutions. Designed and implemented microservices using Java and Spring Boot, ensuring scalability, reliability, and maintainability as Picanova continued to grow its global footprint. Employed industry best practices for clean architecture, enabling modular development and efficient deployment across various

markets and online storefronts. I built RESTful APIs to integrate with payment gateways, shipping providers, and third-party platforms, ensuring secure, real-time data exchange. Throughout my role at Picanova, I focused on building robust, scalable systems that deliver a consistently positive shopping experience. By championing modern development practices, aligning technical decisions with business goals, and fostering teamwork, I helped enhance Picanova's global platform—supporting its mission to bring personalized photo products to customers around the world.

- Designed and developed backend services using Java and Spring Boot, improving system performance, reliability, and scalability.
- Implemented robust, scalable microservices architecture and managed AWS infrastructure (EC2, Lambda) to ensure high availability and seamless operations.
- Developed responsive and dynamic front-end applications using ReactJS and Bootstrap, delivering enhanced user experiences and device-agnostic design consistency.
- Integrated third-party APIs such as EasyPost for shipping services and PayPal for payment processing, streamlining business operations.
- Engineered messaging queues with Kafka and RabbitMQ for efficient data flow, enabling effective system responsiveness and scalability.
- Created and maintained RESTful APIs with Spring Boot, optimizing data flow and ensuring smooth management of payment and shipping microservices.
- Designed and deployed feature-rich dashboards tailored for credit decisioning, fraud detection, and credit repair services, driving critical business processes.
- Integrated private ID verification APIs to enhance platform security and bolster fraud prevention measures.
- Simplified complex backend services to improve system efficiency and support scalability across clustered environments.
- Established CI/CD pipelines using Jenkins, streamlining release cycles and deployment processes.
- Enhanced system load balancing and availability in clustered environments, ensuring robust performance under high-traffic scenarios.
- Collaborated on microservices design for efficient shipping operations, rate comparisons, and credit assessments, leveraging advanced problem-solving skills.
- Maintained and optimized the platform's AWS-based infrastructure, ensuring reliability and high system performance.

Tech Stack: Java, Spring Boot, React, Bootstrap, Microservices, AWS, Jenkins, PostgreSQL, EasyPost, PayPal API, ActiveMQ, AWS ECS, Lambda, DynamoDB, EC2.

CodeBright | Alexandria, Virginia

September 2016 – April 2018

Senior Java Developer

Responsibilities:

- Engineered and maintained high-performance Java backend services, deploying scalable microservices to optimize data management and system efficiency.
- Developed and enhanced dynamic user interfaces using Angular, boosting user engagement and improving overall navigation.
- Optimized database operations by implementing Hibernate and Spring, ensuring robust transaction control and efficient data handling.
- Seamlessly integrated Angular with Spring MVC to facilitate smooth communication between front-end and back-end systems.
- Designed and consumed RESTful web services using JAX-RS, integrating React components for dynamic and responsive user experiences.
- Improved system integration and operational workflows by designing microservices with Apache Camel, enhancing scalability and reliability.
- Automated infrastructure deployment with Chef, streamlining configuration management and reducing manual intervention in deployment pipelines.
- Built custom Java Collections to meet specialized performance requirements, enhancing application efficiency and speed.

Tech Stack: Java, Angular, React, Spring MVC, Hibernate, Spring, JAX-RS, Apache Camel, Chef, Docker Hub, GIT.

Parachute Technology | San Jose, CA

July 2011 – August 2016

Java Developer

Responsibilities:

- Engaged in the full software development lifecycle, from requirement analysis and design to development, testing, and deployment.
- Applied Agile Scrum methodologies, contributing to daily stand-ups and sprint planning to ensure project milestones were met.
- Designed and developed responsive UIs using HTML, CSS, Bootstrap, Angular, and JSP for the presentation layer.
- Integrated Backbone.js to retrieve and manage JSON data, enhancing dynamic content rendering and model population.
- Built scalable applications leveraging the Spring MVC framework, adhering to Model-View-Controller principles.
- Developed robust backend services in Java, optimizing performance and ensuring system reliability.

Tech Stack: HTML, CSS, Bootstrap, Angular, JSP, WCAG, Backbone.js, Spring MVC, Java.

Education

2001 - 2009

Bachelor's degree, Computer Engineering/ San Jose State University
