Sr. Java Full Stack Developer

Professional Summary:

- Sr. Java Full Stack Developer with 8+ years of experience in application development with focus on **design, development, and testing** of responsive web applications and **microservices** using **Spring cloud** and **spring boot**.
- Expertise in **Java/J2EE** Technologies like **Core Java, JDBC, Servlets, JSP, Spring Framework, Spring Core, Spring MVC, Spring Boot, Hibernate, JPA, EJB, JTA, JMX, JCA, Microservices, Junit and RESTful API**.
- Experience in developing web applications using **JSP, Spring Boot, Spring MVC Frameworks, EJB, Hibernate, Spring Security, JBOSS, JDBC, Web Services, JavaScript, JavaBeans**
- Expert in Core Java concepts and technologies in **Java 17/11/8/7**, OOPs, Collections, Exceptions Handling, Input/output (I/O) System, Swing, Annotations, Enums, Concurrency, Multi-Threading, Lambda and Generics.
- Expertise in designing and developing Web-centric applications using **HTML5, CSS3, Java Applets, JavaScript, XML, JSON, Ajax, jQuery, Bootstrap, AngularJS, NodeJS, ReactJS**, Tag Libraries, **Google Web Toolkit (GWT)** and Custom Tags.
- Advanced front-end development using **Angular 16 /12/11/8, React.js, JavaScript (ES6+), HTML5, CSS3, jQuery**, and responsive UI design principles.
- Proficient in developing scalable web and enterprise applications using **Core Java EE technologies** like **JDBC, Servlets, JSP, Web Sockets, EJB, JSF, JPA, JNDI, and JMS**, focusing on performance, maintainability, and modular architecture.
- Hands-on experience with web service implementation, including **RESTful APIs (JAX-RS)** and **SOAP-based services (JAX-WS, JAX-RPC, JAXR)** for secure and reliable system integration in distributed environments.
- Experienced in setup and maintenance of enterprise application servers including **Oracle WebLogic, JBoss EAP, Apache Tomcat, and IBM WebSphere**, ensuring optimized performance and availability.
- Skilled in integrating and deploying applications using **Apache Camel, CXF, Kafka, ActiveMQ, Service Mix, and JBoss Fuse ESB** for scalable system interoperability.
- Proficient in Developing Application using frameworks **Spring Dependency Injection (DI), IOC, Aspect oriented Programming (AOP), Instrumentation, Integration, Security, Boot, Struts, MyBatis** and **Hibernate**.
- Experienced in designing and building **RESTful APIs** using **Spring** and **Spring Boot** and validating API functionality and performance using tools like **Postman** in both development and integration testing phases.
- Strong understanding and practical application of design patterns such as **Singleton, DAO, DTO, Factory**, and **MVC** in enterprise application architecture
- Proficient in **Java 17/11/8, Spring JPA** with **Hibernate** for integrating **MySQL** and **SQL Server**, handling **CRUD** and complex aggregations. Strong in designing multi-tier web applications using **Spring Boot**, with expertise in **Spring Core** features like **Dependency Injection, annotations, and configuration**.

- Experience in **Spring Security Framework** for User Access Management, **JWT** token-based authentication, and involved **OAuth 2.0** configuration for authentication and authorization.
- Extensively worked with **Spring JDBC**, **Spring ORM** using **Hibernate**, **Java Persistence API (JPA)**, and **Docker** containers for building portable, containerized Java applications in modern development environments.
- Experienced in **API** documentation using **Swagger** and implementing search capabilities with **Elasticsearch** for scalable data retrieval
- Hands-on experience with **CI/CD** pipelines using **Jenkins**, **GitLab**, **Bitbucket** and other tools for automated build, test, and deployment
- Proficient in **CI/CD with Jenkins**, **Hudson**, **Travis CI**, **Bamboo**, and deploying **Elastic Cloud**.
- Supported **AWS**, **Azure**, and **GCP** apps, troubleshooting **EC2**, **RDS**, **Lambda**, **S3**, and **Kubernetes** issues.
- Extensive experience in **Amazon Web Services (AWS)** like EC2, S3, Lambda, RDS, Elastic Load Balancing, SQS, SNS, AWS Identity and access management, AWS Cloud Watch, Elastic Beanstalk and Cloud Front, Redshift.
- Utilized **Python scripting** for **cloud automation** and batch processing tasks with **AWS Lambda**, **S3**, and **CloudWatch**.
- Skilled in containerizing applications using Docker and deploying them on Kubernetes clusters (EKS/ECS) in AWS.
- Experience with messaging systems like **RabbitMQ**, **ActiveMQ**, **Apache Kafka** and **JMS** to understand messaging concepts, patterns, and best practices.
- Experience in **Apache Spark** for implementing advanced procedures like text analytics and processing using the in-memory computing capabilities written in **Scala**.
- Experience with **Version Control Systems** like **Subversion (SVN)**, and **Git**.
- Proficient in Test-Driven Development (**TDD**) and Behavior-Driven Development (**BDD**) using **JUnit**, **Mockito**, **Selenium**, and **Cucumber**.
- Excellent analytical, problem solving and interpersonal skills. Ability to learn new concepts fast. Consistent team player with excellent communication skills.
- Involved in all stages of Software Development Life Cycle (**SDLC**) as well as Skilled in **Agile** practices (Scrum, TDD, Incremental & Iterative development), with hands-on experience in **JUnit**, **Mockito**, **Karma**, **Jasmine**, **Jest**.

Technical Skills:

Languages	Java 21/17/8, JavaScript, Python, SQL, PL/SQL, C, C++
Enterprise Java	J2EE, Servlets, Core java, Hibernate, JPA, JTA, JSP, JSTL, EJB, JDBC, JNDI, RMI, Applets, AWT, Multi-threading, Java Networking, Spring Framework, Spring Boot, Spring Cloud
Web Technologies	jQuery 1.8,1.9, jQuery, Dojo, Ext JS, Angular 8/11/12, JavaScript, CSS2, CSS3, HTML4, HTML5, Node.JS, Angular 16/17, React Js, Next Js, Express JS
Tools & Framework	Spring, Spring Boot, Spring Cloud, Spring MVC, DI, Spring AOP, JSF 1.1, JSF 2.1, GWT, Spring Boot, Spring Batch, Spring Security, Spring Data, Struts 1.2, Struts 2.1, Kafka

Web services	RESTful, JAX-RS, JAX-WS, JAX-B, Apache CFX, WSDL, SoapUI 4.0,5.1, Tcp Mon, UDDI
Web/App Servers	Oracle WebLogic10.x/9.x, Apache Tomcat8.0/7.x/6.x, WebSphere, JBoss
Database	SQL Server, MySQL, PostgreSQL, Oracle, DB2, NoSQL, MongoDB, DynamoDB, Cassandra
Methodologies	Agile, Scrum, Kanban, Waterfall, Test Driven Development (TDD), OOAD, SDLC
PM Tools & Security	Jira, Asana, Microsoft Teams, OAuth2.0, JWT, SSL, TLS
Logging & Code	Log4J, Slf4J, Cloud Watch, SonarQube, Sonar Lint, ESLint, Splunk
Version Control	GIT, SVN, GitHub, GitLab, Clear case, bitbucket
Testing Tools/ Others	Junit, Mockito, Jasmine, Karma, Kibana, Cucumber, Mocha, Swagger, Selenium, Postman
Modeling, Build Tools & OS	Jenkins, Maven, Gradle, ANT, UML, Rational Rose, Windows, Mac, Linux, UNIX
Design Patterns	MVC, Front Controller, Singleton, Business Delegate and DAO patterns
Cloud and Containerization tools	OpenShift, (AWS EC2, EKS, S3, RDS, Lambda, CLI, Cloud Watch), GCP, Azure, Docker, Kubernetes, Terraform

Professional Experience:

Client: Bass Pro - Springfield, MO

June 2023 to Present

Role: Sr. Full Stack Java Developer

Responsibilities:

- Utilized **Java 17** in the design and deployment of scalable **microservices** using **Spring Boot**, capitalizing on the latest language features for optimized service construction.
- Participated in all phases of the **Software Development Life Cycle (SDLC)**, from design through to implementation.
- Developed responsive **UI web pages** using **CSS3, HTML5, React, TypeScript, ES6, JavaScript, JSON**, and **jQuery**.
- Developed user interface by using the **React JS, Flux** for **SPA development**, also used **React forms** for data-driven form components and **React router** to define module-level routing.
- Used **ReactJS** to capture user actions and render the relevant action, as well as dynamically render the **UI** based on user actions.
- Utilized **Web Sockets** with **React** to maintain consistent and **real-time state** across users.
- Involved to implement various **client-side interfaces** on the front end using **React.js** and used various predefined components from **NPM** and **redux** library and deployed application to **NGINX**.

- Implemented **API integration** in **React** using **Axios** to handle **GET, POST, PUT, and DELETE** requests and process responses efficiently.
- Developed **microservices** and created **REST API's** using **Java Spring Boot framework**, and **Spring REST** implementation and used **Maven** as a build tool.
- Worked with **Spring annotations** mechanism to create **RESTful applications**.
- Designed and documented **RESTful web services**, defining **JSON** data formats and implementing **API versioning strategies**.
- Implemented **REST API web services** to fetch data from **MongoDB**.
- Secured **REST endpoints** using an enterprise-built **security wrapper**, applying **access control policies** to enforce **authentication** and **authorization**.
- Developed **microservices** using **spring framework**, benefiting from auto-configuration using **spring-boot**, securing with **spring security**.
- Integrated **Python microservices** using **Flask** for processing incoming REST calls and aggregating real-time financial data for downstream systems.
- Used **Spring Core Annotations** for **Dependency Injection**, **Spring MVC** for **REST API's** and **Spring Boot** for **microservices**.
- Used **Swagger** framework for **REST API documentation**.
- Used **Spring JDBC templates** for database interactions and used declarative **Spring AOP transaction management**.
- Implemented **microservices architecture** using **Spring Boot** for making the application smaller and independent.
- Implemented **Kafka consumer** and **producer configurations** to use for **high-volume streaming** with **pub-sub model** using multiple inheritance **AVRO schemas** with same topic.
- Implemented **Spark** using **Scala** and Spark SQL for faster testing and processing of data.
- Developed high-performance back-end applications by writing reusable, testable and efficient code using **NodeJS**.
- Designed and deployed an end-to-end **event-driven microservices architecture** using **Apache Kafka** for messaging and integrated with **Elasticsearch** for **real-time search and analytics**.
- Used **Apache Kafka** with **Zookeeper** as a **message broker** to track service status and ensure reliable communication.
- Designed complex application **Oracle database statements** for querying, updating, and reporting.
- Developed **RESTful endpoints** to cache application-specific data in **in-memory data stores** like **Redis**.
- Used **Spring data JPA** with default implementation of **hibernate ORM** for database connectivity to abstract the complex configuration involved with connection management.
- Developed **API** for using **AWS Lambda** to manage the servers and to run the code in the AWS and with AWS services as event sources. Write unit and integration tests for **GraphQL** resolvers and schema validation.
- Integrating **Kibana** with Elasticsearch to retrieve and display data stored in Elasticsearch indices.

- Automated build and deployment processes using **Maven** and **Jenkins**, improving CI/CD efficiency.
- Deployed the application in **Docker containers** and made it accessible via **cloud services** such as **AWS**. Integrated **Netflix Eureka** for **service discovery**, **Spring Ribbon** for **client-side load balancing**, and **Spring Hystrix** to implement **fallback methods**.
- Created **AWS EC2 instances** and installed required configurations and applications on it and created **S3 buckets** for storing object level data into it.
- Worked on creating the modules driven **AWS** infrastructure with **Terraform**. Created infrastructure **Git** repositories for **Terraform** to launch the stacks.
- Used **Log4J API** for **logging** and **debugging**.
- Utilized **testing tools** such as **Postman**, **Jest**, **Enzyme**, **JUnit**, and **Apache JMeter** to validate functionality and performance.
- Used **debugging tools** including **ESLint**, **Redux DevTools**, and **Chrome Developer Tools** to troubleshoot and optimize application behavior.
- Followed **Test-Driven Development (TDD)** practices by writing **unit tests** using **JUnit** and **Mockito** for all relevant classes.

Environment: Java 17, Spring Boot, Spring Security, Python, Microservices, RESTful web services, Kafka, MongoDB, Oracle, Redis, Docker, AWS EC2, AWS S3, AWS Lambda, NGINX, React.js, Vue.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Axios, WebSocket's, Scala, Maven, Spark, Git, Junit.

Client: Barclays – New York, NY

Oct 2021 – May 2023

Role: Sr. Java Full Stack Developer

Responsibilities:

- Proficient in **AGILE methodology (SCRUM)** for efficient project management, including requirements gathering, analysis, design, development, and testing.
- Implemented **Bean** classes and configured in spring configuration file for **Dependency Injection, Developed Controller Classes using Spring MVC, Spring AOP, Spring Boot, Spring Batch modules, handled security using Spring Security**.
- Optimize multi-threading for **Core Java** applications and minimize memory leaks in **Core Java** code.
- Versatile with **Java** versions where I leveraged **Java 11/8** for my project's migration process and directed a team of 3 developers to implement **Java 8 streams and lambdas** to optimize data processing.
- Utilized **Spring framework** for dependency injection, and **Spring Boot** for rapid deployment of applications.
- **Utilized Angular Reactive Forms and RxJS** to build complex form workflows with real-time validation, enhancing user experience and ensuring seamless data binding with backend APIs.
- Engineered dynamic user interfaces with **Angular 8,11** framework, implementing modular components.
- **Improved application performance** by implementing **lazy loading, route guards**, and **modular architecture** in Angular, resulting in faster load times and better maintainability of large-scale applications.
- Utilized **Bootstrap** along with **HTML, CSS, and JavaScript** to create responsive web designs.

- Implemented **GraphQL APIs** to efficiently fetch data from multiple sources with a single endpoint.
- For data integrity and consistency, I configured **Hibernate** entities and mappings to establish relationships between **Java objects** and relational database tables in **PostgreSQL**, implemented **Hibernate** caching strategies for performance optimization.
- Created and implemented **Oracle** Stored Procedures, Functions, Triggers and complex queries using SQL.
- Enhanced client-side scripting with **jQuery**, simplifying **DOM** manipulation and **AJAX** requests for user interactions.
- Configured and managed **alerts** in **Grafana** to notify teams about system anomalies and thresholds breaches.
- Designed **MongoDB** collections and documents to represent data entities and relationships, providing flexibility.
- Optimized data retrieval with **MongoDB** indexing and configured cloud clusters with **MongoDB Atlas**.
- Implemented **Cassandra** as a **NoSQL** database solution for high availability, scalability, and fault tolerance.
- Designed and implemented **SOAP**-based web services using **JAX-WS**, and thoroughly tested them with **SoapUI** to ensure secure and reliable system-to-system communication
- Designed scalable schemas using **Azure Cosmos DB** and developed **Splunk dashboards** to visualize critical metrics and monitor system performance in real time.
- **Implemented event-driven microservices** using **Azure Functions** and **Timer Triggers** to automate tasks like **data backups**, **log cleanups**, and **real-time processing**.
- **Optimized cost and performance** by configuring **Azure Virtual Machine Scale Sets** for **auto-scaling** during off-peak hours and leveraging **Azure App Service** for **scalable hosting**.
- Developed **secure CI/CD pipelines** with **Azure DevOps**, automating deployments and integrating **Azure Key Vault (KV)** with **Azure AD** for **role-based access** to **secrets and certificates**.
- Orchestrated **time-sensitive workflows** and **scheduled API integrations** using **Azure Logic Apps**, enhancing **automation** and **system interoperability**.
- Enhanced **data reliability** and **access** by optimizing storage processes with **Azure Blob Storage** and **File Storage**, ensuring **secure, high-availability** solutions for application data.
- Utilized **Docker** for containerization, and **Kubernetes** and **Terraform** for orchestrating and managing containerized applications.
- Utilized **RabbitMQ** for efficient message brokering across distributed microservices, ensuring scalability and reliability.
- Used **Log4J** for logging and tracing messages. Used **JBPM** to manage workflow and schedule Jobs.
- Managed project workflows and issue tracking with **JIRA**, streamlining development processes.
- **Integrated Jenkins** with **Git** to trigger **automated builds** on code commits, leveraging **Gradle** for efficient **build automation** and ensuring consistent delivery pipelines.
- Integrated **Spring Security** with **JWT** for robust protection against vulnerabilities and enhance code quality through Spring Boot testing.

- Utilized **JUnit** and **Mockito** for integration testing and **SonarQube/SonarLint** best practices for coding standards
- Applied **Selenium**, **Jasmine**, and **Karma** for comprehensive front-end and back-end automated testing, ensuring application reliability.
- Leveraged **Apache Tomcat** for server management, focusing on deployment and environment handling.

Environment: Java 8/11, Spring Boot, MVC, AOP, SOAP, Web Services, Batch, Security, Data, Cloud, Angular 8/11, RxJS, Bootstrap, HTML, CSS, JavaScript, GraphQL, Hibernate, PostgreSQL, Oracle, JQuery, SQL, MongoDB, Cassandra, JAX-WS, SoapUI, Azure Cosmos DB, Splunk, Azure VM Scale Sets, App Service, DevOps, Key Vault, AD, Logic Apps, Blob & File Storage.

Client: Natera – Austin, TX

Nov 2019 – Sep 2021

Role: Full Stack Java Developer

Responsibilities:

- Designed detailed Use Case, Class, Sequence, and Object Diagrams using **IBM Rational Rose** based on **RUP (Rational Unified Process)** to model and communicate system functionality and architecture to stakeholders.
- Developed and implemented robust backend layers using **Spring Boot** and **Hibernate ORM**, ensuring high-performance data persistence and seamless interaction with relational databases.
- Led the development and deployment of **microservices architecture on AWS**, using **Spring Boot** and **RESTful APIs** to ensure scalability, modularity, and maintainable service communication.
- Integrated Java 9 advanced security libraries and networking features, along with **Spring Security**, to secure APIs, harden endpoints, and safeguard data within microservices ecosystems.
- Configured **API Gateway** using **AWS IAM roles and policies** to control secure access to APIs, mitigating unauthorized use and ensuring compliance with internal security protocols.
- Utilized **Java 8 features**, including **Lambda expressions**, **Method References**, and the **Stream API**, for efficient collection handling and functional programming to improve application performance.
- Designed and developed complex **PL/SQL procedures, triggers, packages**, and inline views in **Oracle**, to support pivot-based reporting and aggregations over finite business value sets.
- Migrated the application from **Java 8 to Java 9**, adopting modular programming paradigms, enhancing runtime performance, and enabling cleaner integrations with frameworks like Spring and React.
- Developed user-centric frontend components using **React JS**, **Flux architecture**, **Babel**, and **Webpack**, leveraging ES6 features to build highly interactive **Single Page Applications (SPAs)**.
- Built and integrated **React JS components**, utilizing lifecycle methods, forms, events, keys, routing (React Router), and animations to deliver a dynamic and engaging user interface.
- Handled operations and maintenance support for **AWS** cloud resources which includes launching, maintaining, and troubleshooting **EC2** instances, **S3** buckets, Auto Scaling. Also created snapshots for data to store in AWS S3.

- Utilized **AWS Lambda** platform to upload data into AWS S3 buckets and to trigger other Lambda functions developed drag and drop document editing.
- Configured **AWS Identity Access Management (IAM)** Group and users for improved login authentication.
- Deployed project with **AWS Services** with EC2 instance, AWS RDS + MySQL which was used to store data in backend.
- Worked on CI/CD deploying pipeline using **AWS ECR, Docker containers** for managing **Kubernetes clusters**.
- Utilized **Apache Kafka** to implement a highly distributed and fault-tolerant messaging platform, aggregating web log data across systems and ensuring reliable data delivery to downstream analytics pipelines.
- Built and maintained containerized applications using **Docker**, orchestrated with **Kubernetes** on **Google Cloud Platform (GCP)** and **OpenShift**, to streamline deployments and scale services efficiently.
- Automated CI/CD workflows and infrastructure builds using **Gradle, Jenkins**, and **Git**, incorporating quality checks and deployment pipelines for seamless release management.
- Scheduled and maintained batch data operations using **Oracle Job Scheduler** and **UNIX cron jobs**, ensuring data consistency and timely processing for core business tasks.
- Developed comprehensive unit and integration test cases using **JUnit** and **Mockito**, verifying database interactions and service logic to maintain code reliability and stability.
- Monitored distributed **Cassandra clusters** using **OpsCenter** and created **Groovy-based DevOps scripts** for automating performance monitoring and data collection across nodes.
- Created backend services and data APIs using **Node.js** and managed JSON-based data storage with **MongoDB**, enabling lightweight microservice interactions.

Environment: Java 8/9, Spring Boot, Spring Security, Hibernate, React.js, Node.js, PL/SQL, RESTful APIs, AWS, GCP, OpenShift, Docker, Kubernetes, Jenkins, Git, Gradle, MongoDB, Oracle, MySQL, Cassandra, Kafka, Drools, Webpack, Babel, Flux, JSON, JUnit, Mockito, Rational Rose, Power Designer, UNIX, CI/CD, Agile (Scrum), RUP

Client: Way2News - India

July 2017 – Sep 2019

Role: Java Full Stack Developer

Responsibilities:

- Involved in various **SDLC** phases like Design, Development and Testing. Interact with business managers to transform requirements into technical solutions.
- Designed the application using the **J2EE design patterns** such as **Session Façade, Business Delegate, Service Locator, Value Object** and **Singleton**.
- Used **Groovy** and **Spring Boot** to collect data from users and packaged the data as **JSON** distributed to 43 applications.
- Configured **Spring** to manage Actions as beans and set their dependencies in a Spring context file. Developed presentation tier as **HTML, JSPs** using **Struts 1.1 Framework**. Used **AJAX** for faster page rendering.
- Extensively used core **Java** concepts like **Collections Framework**.
- Proficiency in creating **ETL (Extract, Transform, Load)** packages using **MS SQL Server Integration Services (SSIS)**.
- Developed **General Ledger** module, which streamlines analysis, reporting and recording of accounting information. General Ledger automatically integrates with a powerful spreadsheet

solution for budgeting, comparative analysis and tracking facility information for flexible reporting.

- Worked on **Data Structures, multi-threading** concepts in **Core Java**.
- Application integration with **Spring Web Services** to fetch data from external Benefits application using **SOA architecture**, configuring **WSDL** based on **SOAP** specifications and **marshalling/unmarshalling** using **JAXB**.
- Developed web pages using **Servlets** and **XML** for various modules and involved in environment set up with **Ant, Eclipse, JBoss** and **SQL Server 2005**.
- Used **Oracle** as the backend database and wrote **PL/SQL packages, stored procedures, views, and functions** at the **Oracle database**.

Environment: Core Java, J2EE, JSP, Struts 1.1, Servlets, Spring, Spring Boot, Groovy, JDBC, Hibernate, MS SQL Server, SSIS, Oracle, PL/SQL, AJAX, XML, JSON, SOAP, WSDL, JAXB, ANT, Maven, JUnit, JBoss Application Server.

Education:

- Bachelor's in Computer Science Engineering, JNTUH, India - 2018
