Summary

Full-Stack AI Developer with 4 years of experience designing and deploying scalable applications across healthcare and fintech. Specialized in the MERN stack and AI-powered microservices, with hands-on expertise in deploying LLMs, OCR, and custom machine learning models. Proven track record in leading cross-functional projects, optimizing architectures, and integrating AI into real-world products. Passionate about applying AI to improve healthcare outcomes and operational efficiency while ensuring compliance with regulations (HIPAA, medical data security).

Skills

- **Languages & Frameworks:** JavaScript (ES6+), TypeScript, Python, React, Next.js, Node.js, Express.js, GraphQL, FastAPI
- **AI & Data:** LLM integration (OpenAI/GPT), OCR (Tesseract), Deep Learning (PyTorch, TensorFlow), Data Processing Pipelines, MLOps (MLflow, DVC)
- **Databases:** MongoDB, PostgreSQL, Redis, MySQL
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, Kubernetes, Terraform, CI/CD (Jenkins, GitHub Actions)
- **Architecture & Testing:** Microservices, Event-Driven Architecture, Jest, Cypress, React Testing Library
- **Healthcare AI Expertise:** Telehealth platforms, medical data analysis, GDPR/HIPAA compliance

Work Experience

Full-Stack Developer | The Avatar X | San Francisco, CA | August 2023 – July 2025

Telehealth Platform Development

- Designed and implemented a telehealth platform for real-time patient monitoring using React, Node.js/Express, and Vite.
- Built Python microservices with FastAPI for multimodal patient data analysis (voice, video, wearable signals), enabling early detection of neurological conditions.
- Migrated a monolithic backend to microservices with Docker + Kubernetes, improving service scalability and deployment reliability.
- Partnered with healthcare teams to ensure GDPR-compliant data handling across the platform.

AI research & Prototypes

- Developed a **deep learning pipeline** (PyTorch) for CT and MRI scan anomaly detection, assisting radiologists in diagnosis.
- Integrated the model into a clinician dashboard (React + DICOM viewer), supporting real-time image review.
- Achieved 92% accuracy in validation tests while implementing MLflow for versioning and reproducibility.
- Built an NLP model using **transformers (BERT)** to extract structured insights from unstructured clinical notes (e.g., risk factors, treatment history).
- Deployed via FastAPI microservice and integrated with PostgreSQL for queryable insights.
- Enabled doctors to query patient records 40% faster compared to manual search.

Full Stack Developer | Round Table Resource Group | Orlando, FL | June 2022 – August 2023

- Led UI/UX development of the flagship financial analysis platform using **Next.js, React, and Material-UI**, ensuring responsiveness and accessibility.
- Architected APIs and microservices (Node.js, FastAPI, GraphQL) with **Redis caching and PostgreSQL**, reducing average query response times by 60%.
- AI/ML Initiatives:
 - Built an **AI-powered news enrichment pipeline** using OCR (Tesseract), NLP (transformers/BERT), and LLMs to analyze and summarize large volumes of financial content.
 - Collaborated with data scientists to build a **time-series forecasting model** for financial market trends (Python, scikit-learn), deployed as a FastAPI microservice integrated into the main platform.

- Contributed to a prototype **document fraud detection system** by applying convolutional neural networks (CNNs) to scanned contracts and IDs, achieving >90% accuracy in internal testing.
- Managed CI/CD pipelines with GitHub Actions and Jenkins, automated Docker builds, and deployed services on **AWS (EC2, S3, Lambda)**.
- Worked closely with product managers and data scientists to translate business requirements into scalable technical solutions, improving feature delivery and reducing iteration cycles by 20%.
- Improved code quality by introducing unit testing standards, API documentation practices, and CI automation, ensuring more reliable deployments.
- Improved platform performance, increased scalability, and delivered AI features that enabled analysts to process 3× more financial reports daily.

Associated Full Stack Developer | Round Table Resource Group | Orlando, FL | August 2021 – May 2022

- Contributed to the development of a new **FinTech SaaS product**, collaborating closely with designers, backend engineers, and QA teams.
- Implemented core product features in **React and Node.js**, including user authentication, dashboards, and payment integration.
- Supported the creation of REST APIs and database schemas with PostgreSQL and MongoDB.
- Developed automated unit and integration tests, ensuring stable release cycles.
- Worked in Agile sprints, delivering **10+ production-ready features** on schedule.
- Gained hands-on experience with **cloud deployment (AWS EC2, S3)** and containerization (Docker).

Education

Bachelor of Science in Computer Science, Full Sail University, Winter Park, FL | September 2018 - May 2022
